CSI CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed at base. 90 speed dials, two level safety codes. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with nice base antenna, more height or an amplifier. Ever more range through a repeater. Just tune the rig to a wide coverage repeater (A club could run this patch from a home). Connects to any rig so use it with a LOW COST spare 2m (220 or whatever). Easy volume adjustments and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, YOU are the control operator. Plus, a long list of other professional features. With a cross-banding rig in your car, you can go all over town making AND RECIEVING calls on simplex with your HT on low power 440! Set it to ringout, send DTMF (touch tone) code or use a silent PL tone, sent to your HT. Imaculate $299

So, this is a computer system working as your patch not just a complicated curcuit. The is the deluxe, everything has been thought out kind of patch. It's made into a small box about the size of a mobile rig. I know you will LOVE it.

I also have the following for sale by the way......

$149 - Mother board, INTEL PENTIUM 90 mhz,*PCI* & ISA bus with CPU and fan. Upgrade your computer today. Takes 72 pin memory. (see PCI card below). Like new with intel manual.

$59 - Card - SVGA *PCI* high quality video. **$39** with above motherboad!

$29 - 14.4K fax modem with manuals **$10** with MB & Video card.

I bought the MFJ 2M/220 antenna tuner. At around $80, it's a little pricey,
but it works well. It's first application was in loading up the mounting pole
for a roadside assistance callbox as the antenna for a hidden transmitter. (I
bought it to place in my ammo can transmitter for just such occasions.)

Source record: 175080

Hi every OM's,

I'm working for a telecommunication department in a engineering school in Belgium Europe. I have an ICOM IC 706 MKII for 2 weeks now. What a wonderful transceiver !!! but we need to have to possibility to transmit from 1.6 mhz to 54 mhz inclusive to realize our antenna tests.

This modification is possible on the first version of the transceiver - I've found it but the PC board seems to be different on this new version. We have to take out a single diode (d59) near the 9 mhz ssb filter but I can't see exactly what to do in the new one ...

Could somebody help me ??? 73's
for ON5FE Guy.

Good Morning Dean -- In case no comes forward with the manual, you can
find several vendors who specialize in manuals at URL:
http://pw2.netcom.com/~ac6v/pageaae.html
At least one of these has the manual you seek, but cost is about what u
paid for the rig!!

3808. Re: Astron RS-35M, good idea???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: k5dh@qsl.net
Message-ID: <5lpl79$g2h@sf18.dseg.ti.com>
Source record: 175082

I've been using the same Astron RS-35M since I bought it new in 1984. I run all of my gear on it at one time! I've had only one problem, and it was minor. The on/off switch contacts welded themselves in the ON position. I have a master on/off switch for the station, so I just ignored the bad power switch on the RS-35M for several years. Eventually, I replaced it with a better switch. I also added some heavy duty 5-way binding posts to the front panel for quicker power connections for temporary use (I still use the big bolts on the back panel for permanent connections to my main gear). All in all, I'd say there is probably not a more reliable p/s on the market than the Astron line. You cannot go wrong with an Astron.

I would AVOID the cheap Pyramid supplies... junk!

73,
Dean K5DH

Subject: Any HTs with Rcv Attenuator?

Does anyone know of an HT that has a selectable receive attenuator? Seems like
it should be easy enough
to include one and it would permit operation with a roof-top antenna without a
lot of intermod.

Any info on this would be appreciated.

Thanks,
Art Harris, N2AH

My first bet would be on a shorted rectifier diode. If it's easy, you
might disconnect everything from the positive lead of the bridge and
see if the fuse still blows; that'd eliminate a bunch of other
possibilities.

If it's not easy, I'd just take an ohmmeter to the diodes.

With all due respect, to say something is "better" is subject to what's
important to the person. _BOTH_ units are very good.

If smaller size and dual bands are critical to a person, then the Yaesu
FT-50RD is the better unit.

However, if low cost and an easy to operate unit are important to a person,
then the Radio Shack HTX-202 is ideal for that person.

My friend Bill (W6DIV) owns a Yaesu FT-50RD. He likes the small size and
dual band ability.

I own a Radio Shack HTX-202. It may not be small or sexey, but it sure
does what I want it to do.

I guess that when someone asks, "What's the "best" HT to buy?" It's a matter
of what factors are critical to them:

Cost
Single or Dual Band
Size & Weight of the unit
. . .

Although I love my HTX 202, out-of-band receive is the reason I'm looking for
a new primary HT. Weather changes can be a great thing to hear about
when you travel. Other than that though, I can' complain about the RS HT.

>> While the V7A is not built to "Mil Spec" standards as some Yaesu's
>> advertise, it is built to ISO 9002 standards. These are very tough
>> and a much sought after certification in the private/commercial world.

Actually, I believe ISO9000 and its components, such as ISO9002, are
not product specs in any form. They are process certifications (for
manufacturing, serivice, etc.), and are simply a certification that
you have a quality system in place whereby you (1) say what your
process is (2) document it (3) follow it (4) document that you
followed it. You could make cement lifejackets by ISO9002 as long as
you follow these guidelines. This is not a knock on the Kenwood radio
at all, but as one who has gone through the ISO9000 certification
process, I must point out that it does not in any way assure good
products.

> 2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
> that can accommodate 200w?

I'm not sure what `remotely tuned' implies. But if you include
automatic tuning in that, then you may be interested to know that I
learned from SGC at Dayton this year that the company has now upped
the rating on the SG-230 to 200w. This rating change is based solely
upon more recent testing and analysis and not on any component
changes, and so this higher rating applies to SG-230's already put
into the field under the previous 150w rating.

If in doubt, check with the company.

Subject: Simplex Phone Patch???

Simplex patches can go as far as you can. Plus certain ones can be "attached to a repeter" just by tuning it in. Sound quality is perfect. Just like a repeter located. auto-patch. I have the CS-900 for sale. Best thing is, you are in control of the patch and it's use. It's between you and the FCC. It's also much more private because you can tune it to any frequency you prefer and change it often. Here's my ad.

The one I have for sale is the best thing going. Not because I have it for sale, but that is the truth. CSI makes the patch you want because it covers all the things you will run into. The CS-900 is a VOX Simplex patch. But, that doesn't mean it can't work with/on a (duplex) Repeater. See the following.

CSI CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect). Makes your HT like a Cell Phone. Works extremely well. Dual-bander not needed at base. 90 speed dials, two level safety codes. Built in programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with nice base antenna, more height or an amplifier. Ever more range through a repeater. Just tune the rig to a wide coverage repeater (A club could run this patch from a home). Connects to any rig so use it with a LOW COST spare 2m (220 or whatever). Easy volume adjustments and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, YOU are the control operator. Plus, a long list of other professional features. With a cross-banding rig in your car, you can go all over town making AND RECIEVING calls on simplex with your HT on low power 440! 3816. Cheaper source of Radio Shack Rotor.

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: tnic <tnic@IDT.NET>
Message-ID: <5lpq5u$ma1@nnrp1.farm.idt.net>
Source record: 175090

Radio shack sells a TV antenna rotor for $65 (page 135 or the R/S
catalog) which many helpful HAMs have said should work fine for a
lightweight 6 foot Yagi for 2m/440. Thanks to all who responded.

Radio Shack often applies a price increase along with there name on such
items.
Can this item be purchased for less? I have heard this rotor can be
purchased as low as $35 but I don't know where.

If you know of a Mail order source with lower prices PLEASE E-mail me
there phone number and any other info (like the model number and price)
you think may help.

Better living through technology!

Lee,
Although I'm using it now, mine worked quite well. I was very pleased
with it. Other circumstances, (took tower down), stopped me using it.
I have a CES if you are interested. Used it with a Johnson PPL 6000 (25
watts). Got reliable 15-20 miles out it with a 65' tower and a 6 db
omni antenna.

There are several mods which involve removing diodes. If you aren't
interested in that, cutting the green wire which is accessable by
removing the ctscc module will give a modest increase in coverage
(118-174, 420-450). Reset the microprocessor afterwards.

Hi,

I hope this is posted in the correct newsgroup.

I live about 30 mile from the nearest uhf translator.

Well, channel 25 is very ghosty. Sooo I am hoping to make an antenna.

Does anyone out there, have plans to build a UHF antenna?

If so would you e-mail me the plans?

Thank you,

The White Knight

Neither do I. They've always been helpful, and have never treated me (a
'no-code' tech until yesterday) badly.

3831. ICOM2710 or Kenwood V7A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-19 00:00:00 UTC
From: kb9nvh@bluemarble.net
Message-ID: <864072303.211@dejanews.com>
Source record: 175105

I have read many good reviews abot the V7A but am now wondering how this radio stacks up against the icom 2710H.

Has anyone used both of these radios (kenwood V7A and Icom 2710H) and if so could you give your honest opinion of each...

I am mainly interested in the intermod rejection performance of the two radios.....Also, wonder if both have equal features in the crossband repeat modes, like:
full and half duplex (where radio sends only one way on either frequency or both ways),
transmit hang time options,
transmit time out options,
ability to change frequency from the remote transmitter.

I would seem that the kenwood gives the most bang for the buck (free tone squelch, alpha numerics, ect).

Any advice is appreciated.....Thanks

Todd Snyder (KB9NVH)

Yah. I've ordered stuff from them through the UPS (MFJ939E
tuner) and bought small dollar stuff at the store. They
were always polite. I will say that the time I was actually
in the store there were a lot of customers for the number
of employees at the counter, so I did have to wait a couple
of minutes to get service, but I didn't find that particularly
annoying ("Gee, I'll go check out this new rig...cool.").

The time I was in the store they did not ask for my ham
call, so they couldn't have possibly known my license
class.

I've also had good luck with Universal Radio in Columbus, OH.

Drew

I have a TS 450S in excellent condition. It includes an automatic
antenna tuner, a SSB filter and a CW filter. I have modified it for
increased TX frequencies and increased front end sensitivity.
I am asking $950 with the filter or $825 without the filters.

Please send replies to:
rcuffee@erols.com

I saw a posting from another Ham saying to remove Diode # 116, 118 ,119
This will give you TX from .5 to 60 MHZ and TX from 136 to 174 MHZ.
I have not tried this and am only reposting this info from a previous
posting that I saw on this Newsgroup. Do this at your own risk.

Hello,
I am looking at buying this power supply for my Icom 706. I realize it is more than I need for that but I wanted to be able to use it should I need more amps in the future. I have three questions:
1)is this a good power supply?
2)is my thinking sound as far as future expansion goes or should I save some money and get a smaller power supply?
3)will I be popping 15amp house breakers with this or does it depend on what is running off the power supply? right now I have two computer on this circuit and no way to run a new outlet, I could turn one off when on the air but one computer I will need.

73's and thanks for your help. Eric KB9QAI No.Spam@add-inc.com

Go for it. I bought a VS50M 7 years ago. It has served well for whatever
comes in and out of the shack.
I currently power my TS870 HF rig. and all my VHF and UHF stuff (since I
never xmit simultaneously)
so 1) yes it is a good pwr supply, 2) sound thinking - you can never have
too much 12VDC capacity,
3) No, it is not a significant 12VAC drain to pop breakers.

Have fun es Gud DX

cheers

Actually, I believe ISO9000 and its components, such as ISO9002, are not product specs in any form. They are process certifications (for manufacturing, serivice, etc.), and are simply a certification that you have a quality system in place whereby you (1) say what your process is (2) document it (3) follow it (4) document that you followed it. You could make cement lifejackets by ISO9002 as long as you follow these guidelines. This is not a knock on the Kenwood radio at all, but as one who has gone through the ISO9000 certification process, I must point out that it does not in any way assure good products.

Eric:

I have been running an RS35M since 1993.
I also bought mine with extra capacity in mind.
When you draw 35 amps, that does not mean that you are drawing that much on the 120 volt circuit that supplies it. I run my supply on a 15 amp circuit, with a computer, and other things on the same circuit, and have never had any problems.

Astron makes some very nice power supplies.
You may want to take a look at their switching power supplies.
I bought one for my IC706. it is about the same size as the 706, and very light weight. It puts out 20 amp continuous, and 25 intermittant. I think the model # is SS25. there is also one that puts out more, 35amp intermittant, I think.
The 20 amp one was around $100-$125.
Apparently not too many people know about the switchers made by Astron yet. They have been out only a few months, I believe.

Bought mine at Amateur Electronic Supply.

HF MOBILE NOISE ELIMINATION

In my experience, there are three parts to the job of installing HF mobile in a vehicle: Installing the radio, installing the antenna, and suppressing noise. Of the three, suppressing noise is probably the hardest.

The first question is what kind of noise you are experiencing. If it sounds like a popping noise, and gets louder when you accelerate, it is probably ignition noise. If it is a hash type noise, it is probably an electric motor. The engine fans on my Tercel were very bad, but only ran in traffic, so I just lived with it. I was told that .001uf caps, short leads, from the motor to ground would help, but never did it. Some electric fuel pumps can be very noisy.

One test to see if the noise is coming from the power cable or the antenna is to disconnect the antenna. If you still have noise, work on the power cable. If the noise goes away, the power is OK, focus on suppressing noise at the source. If you connect the radio power cable directly to the battery, you will probably not experience noise on the power cable. (Don't forget to fuse both plus and minus at the battery for safety). Heavy cable is advisable; I would not use anthing smaller than 12 ga, and some people use welding cable.

I assume here that you have broad-band noise across various bands. If you have a single frequency birdie, you probably have noise from the computer crystal.

You might check to be sure that you have resistor plugs and wires before starting more serious work. Also, be sure that your noise blanker is on, although most radios do not have super-effective noise blankers.

On a 1979 Honda Civic with points, I used resistor plugs and wires, which solved the problem, but meant that I had to change the points every 5000 miles or so, as the iginition system was designed for resistor wires only, and if the ignition system was not perfect, the

car ran poorly.

On a 1985 Toyota Tercel, I had tremendous luck suppressing ignition noise by buying heavy copper tubular braid, and slipping it over the spark plug wires. I built a copper box that covered most of the distributor, bonded the braid to the box, and then bonded the box to the block, keeping the wires short. This was a day and night improvement, and I never felt the need to do any more ignition noise suppression.

On a 1996 Subaru Legacy, I again built a copper box, and bought more tubular braid. However, I only got an improvement of about 2 S-units. I needed more, especially on 40 meters, so I ran two ground wires from the exhaust pipe to the chassis. This was probably worth more than 2 S-units, and finished the job to my satisfaction.

If you are systematic, you should be able to identify the source of any problems and correct them.

A couple of other notes on HF mobile installations. Don Johnson, W6AAQ wrote the book, 40+5 YEARS OF HF MOBILEERING. Try to get a copy. I use the Hustler antenna system, and find it adequate except on 75 m. If you plan to operate 75m, consider a WB5TYD Texas Bug Catcher or a Screwdriver antenna. Unless you have an automatic or remote tuning system, the antenna bandwidth on 75m will probably be only about 50kc or so. I have never invested the time and effort required to achieve a satisfactory 75m installation.

Good luck

John,

I would reccomend that rather than use a matching transformer (tried that), that you build a simple single transistor preamp that has a high impedance input, and low impedance output.

The D-104 is about 5K ohms, but depending on age, actual element, and condition, could realy be anywhere from 1K to 10K ohms and still be good.

If you don't have access to a schematic for the preamp, e-mail me and I'll send you one.

3862. Kenwood V7A microphone mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: jrhodes@iti2.net
Message-ID: <3381d95c.607492842@news.zippo.com>
Source record: 174979

A friend told me about a problem with the Kenwood V7A microphone and said that Kenwood has a mod for it. The microphone apparently picks up outside signals and reprograms the radio. Has anybody else had this problem? Where can I get more information about it? I just ordered the V7A from HRO Denver yesterday and none of the people there had heard of any microphone problems or mods.

3863. FS: KW TS450SAT $750.00

3868. Have you modified your Icom ic2sat?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: Jon Dickason <dickason@dickason-pc.eng.mc.xerox.com>
Message-ID: <NEWTNews.864149342.22930.dickason@testclone.eng.mc.xerox.com>
Source record: 174985

I recently attempted to modify my Icom IC2SAT following instructions I've seen posted on the net. I got the diode from Icom and was ready to install it. According to the plan, I should have an empty spot for it right next to an IC. Well, I already have a diode next to my IC,but there is any empty spot to the right of that one, so that's were I put the diode. The CPU seemed to lock up and I couldn't transmit on any frequency, even 144-148. I took the diode out and was back to the regular transmit range.

The other part of the mod mentions a non-surface mount diode on a separate circuit board for the ptt switch. I don't seem to have a diode here, but the docs also say these are sometimes left out at the factory.

If anyone has done this mod, please contact me and tell me what I'm doing wrong. Thanks.

Hi, Dave

I think you're getting normal performance - you're expecting too much from a handie-talkie to reject intermod near the downtown Chicago area - one of the most intense RF areas on the country. HTs have minimum room for filters, and the Z-1 (and most other HTs) are designed for wide receive coverage, making available filtering less effective. Some mobile radios would do a better job (but some are notorious for poor intermod rejection).

You have two options - a band PASS filter, or a band REJECT filter, and there are several now on the market to solve problems just like yours.

The bandpass filter will be connected between your radio and your antenna, and will allow only the amateur band signals into the HT. The commercial signals that now cause you a problem will be either much weaker, or gone altogether... but you also won't be able to receive anything outside the ham band (including NOAA weather on 162.55 MHz).

And I've seen band reject filters, tuned to the 152 MHz area, designed to eliminate just the frequent (and very annoying) pager signals that are a very common source of intermod interference in ham receivers. IF that's where most of your problem is coming from, a reject filter will quiet the intermod, but still let you hear the other commercial traffic outside the ham band.

Say hi to my old friends on CFMC (146.76) in Chicago...

73,
Gary KN4AQ (formerly WA9NSO)

THIS CORRECTS AN EARLIER POSTING WITH A GLARING TYPO IN IT. APOLOGIES...

I have a Kenwood TS-830S transceiver for sale (it doesn't appear to have any add-ons). Price is best offer above $350 plus shipping from the San Francisco area. I can post a digital image of it if you're interested in cosmetic condition. This is from an SK's shack (former Advanced), and his meticulous neatness tells me it's probably in fine working order. E-mail to vidgames@netcom.com.

Good for you in wanting to make your own antenna! Channel 25 has an audio carrier freq at 541.25 MHz (video extends 4.5MHz below). The ARRL handbook and the ARRL Antenna handbook have how-to-build articles for antennas in the 70cm (420-450MHz) band. They include yagis, corner reflectors, etc. the build-to examples give frequency/dimension guides that will make it very easy for you to build
one for 540 MHz instead (it will be a little smaller than the ham freq versions).

If you can't (or don't want to) buy one (handbook) -- the local library (community or university) will have a copy.

30 miles isn't tooooo bad for those frequencies (depending on terrain), so anything should improve. Ghosts are typically from
reflections so you might benefit from directivity more than gain.

Go ahead an experiment -- remember the age old quote "All antennas work - some just better than others"

Cheers

Following is an updated list of Ham gear I'm parting with. The
prices are negotiable, and I'm mainly interested in
selling everything on this list, so there will be some bargains.
Manuals and documentation furnished where available. Here's the list:

1. CDR Rotor Control Box. Series 4516, for use with HAM-M rotators.
$20.00, plus $5.00 UPS freight.

2. Complete RTTY, CW and ASCII digital station. INFO-TECH M-300C
Keyboard.
Transmits RTTY, CW and ASCII at all normal speeds and shifts.
INFO-TECH
M-200F, RTTY/CW/ASCII Demodulator. Copies all standard speeds and
shifts,
and has video output, printer support, etc. Taxan 14" Amber Video
Monitor.
Complete system $200.00, plus $25.00 UPS freight.

3. "Digi-Designer" Work Station. Complete digital IC test and
construction
aid, with internal clock, (1 to 100K speeds), four logic switches, two

pulsers, IC test and assembly block. Built in 110VAC power supply,
(TTL
voltages output). $25.00, and $5.00 UPS freight.

4. Homebrew WB4VVF Iambic "Memory Keyer". $20.00, $5.00 UPS freight.

5. Homebrew WB4VVF Iambic Keyer, with built in clock and 10 minute
timer. $20.00, $5.00 UPS freight.

6. 5-Volt, 1 Amp, "Calectro" Regulated TTL Power Supply. $10.00,
$3.00
UPS freight.

7. HAL SPT-2 "Spectra-Tune" Digital Tuning scope. Ideal for tuning
RTTY,
AMTOR, PACTOR, Clover, CW, etc., signals. Absolutely mint condition.
$75.00,
plus $7.50 UPS shipping.

8. "Hustler" MO-2 Folding Mobile Antenna Mast. $10.00, $3.00 UPS
Freight.

9. New Kenwood PG-2 DC Power Cable. Fits TM201, TM211, TM401, TM411,

TM2530/2550/2570, TR8400/9500, TR751, TS670, R600/1000/2000. $5.00,
plus

$3.00 UPS freight.

10. Sencore Calibrated Field Strength Meter, Model 704B. Covers 54 to
220 MHz. In excellent condition. $80.00, plus $20.00 UPS shipping.

11. Drake 7073DM Hand Held Microphone. $10.00, $4.00 UPS freight.

12. New Radio Shack Dynamic Hand Held Microphone, with 5-pin DIN type connector. $5.00, and $3.00 UPS freight.

13. Sold.

14. Sold.

15. Sold.

16. "Swan" SWR-1Aa Power and SWR Meter. $15.00, plus $4.00 UPS freight.

17. "Siltronix" SWR-2, Power and SWR Meter. $15.00, plus $4.00 UPS freight.

18. Forty-foot Rohn 25 Ham tower, with a HyGain TH-3 "Thunderbird" 10-15-20 Meter Beam antenna. Telex "Tail Twister" Heavy Duty Rotor, and Control Station. Three element two-meter beam, and Ringo Ranger two-meter vertical antenna, installed on tower. Pick up only in Rapid City, SD. Bargain priced at $700.00 firm.

19. HAL Communications PCI-3000 PC Computer Board. Excellent digital communications, (RTTY, CW, ASCII and AMTOR). Complete documentation.
Bargain priced at $175.00, plus $7.50 UPS shipping.

20. Sold.

21. Heathkit IT-741D Logic Probe. $15.00, plus $4.00 UPS shipping.

22. Heathkit "Cantenna", 1KW Dummy Load. $20.00, plus $7.50 UPS shipping.

23. Epson MX80F/T Tractor Feed Dot Matrix Printer, with roll paper adapter. $50.00, plus $10.00 UPS shipping.

24. New "Pro-AM" Two-Meter Mobile Antenna, (surface mount). $15.00, plus
$5.00 UPS shipping.

25. Sencore Digital Volt Meter. $10.00, plus $5.00 UPS shipping.

26. "QST" Magazines. January 1974 to March 1997, complete, 288 issues! $50.00, plus $20.00 UPS shipping.

27. "Ham Radio" magazines. Bound editions for years 1976 and 1977. $10.00, plus $7.50 UPS shipping.

28. CY-1300 Oscilloscope. Military surplus and makes a good RTTY,
AMTOR, Clover, monitor. $10.00, $10.00 UPS shipping.

73.....and thanks.....Dick, K0VKH

Best Regards!

3885. Re: Astron RS-35M, good idea???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <01bc64c0$868cbcc0$34d1bbcd@pemble.ix.netcom.com>
Source record: 175047

In addition to the VS50 supply I bought (which has run flawlessly with no problems) I bought
a pyramid 12 amp supply (for the packet stuff). It litteraly blew-up within a few hours of being on.
Turns out that the rectified DC voltage presented to the filter cap was way over the max ratings
of the electrolytic. I replaced the cap -- and it has run for years since then, but.....how many
others had smoke and flame?

cheers Rick W4RP

From: "Viking" <No.Spam@add-inc.com>
Subject: Astron RS-35M, good idea???

Hello,
I am looking at buying this power supply for my Icom 706. I realize it is
more than I need for that but I wanted to be able to use it should I need
more amps in the future. I have three questions:
1)is this a good power supply?
2)is my thinking sound as far as future expansion goes or should I save

some money and get a smaller power supply?
3)will I be popping 15amp house breakers with this or does it depend on
what is running off the power supply? right now I have two computer on this
circuit and no way to run a new outlet, I could turn one off when on the
air but one computer I will need.

73's and thanks for your help. Eric KB9QAI No.Spam@add-inc.com

Go for it. I bought a VS50M 7 years ago. It has served well for whatever
comes in and out of the shack.
I currently power my TS870 HF rig. and all my VHF and UHF stuff (since I
never xmit simultaneously)
so 1) yes it is a good pwr supply, 2) sound thinking - you can never have
too much 12VDC capacity,
3) No, it is not a significant 12VAC drain to pop breakers.

Have fun es Gud DX

cheers

From: "Michael Mello" <kq7e@sprynet.com>
Subject: HELP: Rpt noise when windy!!

Sounds like the hardware (if it's rusty, that's you're problem) is acting
as a non-linear rectifier. When the different transmitters key, the RF
mixes in the rusty joints, and you now have some rather spectacular, albeit
unwanted, RF products floating around. These may not be evident on UHF.

I had a Phelps Dodge Station Master in a fiberglass radome go bad, and
would produce the same results. What died were a few of the antenna
elements inside the radome, which is really a PITA to get into. They were
intermittent, flexed about, and whenever the TX keyed up, generated
crackles, noises, and non-linear products all over God's creation. Same
effect. So, that's two things to look at, rusty hardware (replace it, bond
around it, etc) or bad antenna (take it down and fix/replace it).

Now, if you are using the DB Products, (say a DB214) you'll definitely want
to bond the top mast to the bottom mast with a few pieces of good braid.
The two pieces, while fitting into one another, do get corrosion in the
joint, and give the same wonderful noise problems.

Good luck!

And don't forget that it doesn't clone either. >: Of course it can be programmed (and stored) on a computer like the commercial versions, but they clone and this one won't. Check out http://www.acsys.com for info, the TV-V7 version is out now. I have no affiliation with anyone except the fire department.

Nice radio by the way, I like that you can split the incoming and outgoing PL tones (finally).

I've had my Kenwood V7A for a month now. Mounted it day one in the car and it has done great. I like the audio, and the features. My only complaint about the audio is POSSIBLY my problem. I have a speaker floor mounted, and when I drive 70 with the windows open, I really have to crank it up to hear. So I'm sure it's my speaker location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the

audio may be from the use of external speaker, not internal one. But
I use external speaker on every rig I have except HT's.

You mentioned the receiver - the V7A has, in effect, a pre amp that
you can turn on or off for receive. Kenwood calls it AIP or Advanced
Intercept Point. I've had no problems in hearing far stations, and
can usually get back to them.

While the V7A is not built to "Mil Spec" standards as some Yaesu's
advertise, it is built to ISO 9002 standards. These are very tough
and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it
when you turned it off, it powers up exactly the same way. If you
turned it off scanning, it comes back on scanning. That is nice.

2. There are 4 selectable "Program Modes" that you can store many
operating features in. I use it primarily for Day/Night changes. In
day mode, I have the display bright and the "beep tones" low. In the
night mode - Display is dim and beeps are loud. There are many other
ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only
one feature I would consider missing, that is the MUTE. When
listening to 2m and a 440 station comes on, neither band will mute
automaticly regardless of which is primary.

Good luck Joshua!!

>What about mail order? Require a photocopy of a Ham license.

You are asking amateur radio dealers to become policmen then? It's not up to dealers to determine or to enforce any rules on who can and cannot operate transmitting equipment. And, not all hams carry copies of their amateur licenses when they go into retail establishments...do you refuse to sell to them? This is bucket 'o worms material.

Also, not ALL illegal transmissions are caused by unlicensed operators. I'd venture to say the vast majority of illegal transmissions are caused by licensed individuals or groups. Either for some political agenda, personal vendetta or the like. With more and more folks getting into the hobby we are going have a wider diversity of personalities -- good and bad. MORE - this means of both types - hence a greater number of infractions.

I have worked in the amateur retail business. I have sold transmitting equipment to unlicensed individuals. There was and is no law telling me to do otherwise. As a matter of fact it was my understanding I would have been breaking laws by refusing to sell to anyone.

We (as hams) don't really like this but for now there is not much we can do about it except to remain self-policing and to do what it takes - legally - to squelch these unhappy, psychologically challenged persons.

This same topic seems to come up about every six months or so and has been hash and rehashed. If you want to use analogies, etc. what about someone with a Technician license? Not a Tech Plus mind you. Should that person be prohibited from owning a piece HF equipment? They don't have a license for it.... Should radios be manufactured for each class of amateur license? So, when you upgrade your ticket you have to upgrade your equipment also? If someone plans to become a ham, why can't they have the transmitting equipment already in their possession? There are a lot of things to think about. This truly can be a bucket 'o worms.

> 73,
> Jimmy Kahn, WA2ILK

Yes, I'd love to see the laws change where one MUST show proof that they
have a ham license before they could purchase any ham transmitters. As for
mail order, if I place a phone order as KF6JHG, the call sign database
will have my address. If I want them to ship to another address, then
a fax (or photocopy) of the license would be required.

I'll guess that Radio Shack wouldn't like that law. It might cut a little
into their sales. However it would cut down on the sales of equipment to
the jammers and jerks.

I'm sure that some Bozo who wants to buy the equipment will find a way
around the system, but such a law would slow or stop most of them.

73,

Bob KF6JHG

I saw an advertisement in the classified ads of QST where the Heath manuals can be obtained. They claimed to be the only authorized source of the manuals, but I kind of doubt if the copyright could be valid anymore. Brian

Date: 18 May 97 23:19:39 GMT
From: ve1rj@ns.sympatico.CA (Bill McFadden)
Subject: Yeasu FT-736R

I am wondering if anyone has any answers to a question I have about the FT-736R.

I have just put in the 6M module and have played around a bit with the scanning option on the rig. I want to be able to scan from say 50.100 to 50.200. During my research I have to have the squelch up in order for it to scan properly. Playing with the RF gain and the Squelch I was able to get it to scan satisfactorly and it is able to pick up weak stations and stop scanning. I am using the pause button in so it only pauses for 5 secs then carries on. Stopping almost immediately again because of the signal. This is good because I know someone is on there.
However, my biggest problem is the bloody beep it makes when stopping the scan, when starting over the scan (using pms) or even when hitting buttons.

Is there anyway in turning this beep off?

Tx in advance

Bill (VE1RJ)

Is the problem them or you. I have asked many questions of the people
at HRO and never had any problems. The sales people have always been
super and the service has been the same.
I guess that you had a bad day and took it out on them????

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig
>
> Yeasu FT2500M
> Icom IC-2000
> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I can tell you that the Yaesu FT2500M is a superb radio. Lots of nice features, plenty of power, very rugged, and the best intermod rejection of any rig I've ever used. Works very well base, mobile or packet. Just one ham's opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

Mike, N4PDY

Subject: News Rover -- Searches newsgroups for what you want - 218 0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for
messages about items that you collect. Once you tell it what to look for,
News Rover will scan a set of newsgroups and collect all messages that
contain what you are searching for. For example, if you are interested in
messages related to slide rules or calculators, you could specify a search
expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any
messages that match the search expression. This searching is completely
automatic, so it works while you sleep, work, or play. The search
expressions can be as simple as a single word, or they can be complex
expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

I've had my Kenwood V7A for a month now. Mounted it day one in the
car and it has done great. I like the audio, and the features. My
only complaint about the audio is POSSIBLY my problem. I have a
speaker floor mounted, and when I drive 70 with the windows open, I
really have to crank it up to hear. So I'm sure it's my speaker
location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on
dashboard and radio under dash - speaker on floor. So my liking the
audio may be from the use of external speaker, not internal one. But
I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that
you can turn on or off for receive. Kenwood calls it AIP or Advanced
Intercept Point. I've had no problems in hearing far stations, and
can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's
advertise, it is built to ISO 9002 standards. These are very tough
and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it
when you turned it off, it powers up exactly the same way. If you
turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many
operating features in. I use it primarily for Day/Night changes. In
day mode, I have the display bright and the "beep tones" low. In the
night mode - Display is dim and beeps are loud. There are many other
ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only
one feature I would consider missing, that is the MUTE. When
listening to 2m and a 440 station comes on, neither band will mute
automaticly regardless of which is primary. =20

Good luck Joshua!!

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =
and=20
>one-way repeat functions". What is the one-way function? Sounds like=
=20
>a single band repeat function, but I don't want to make assumptions.

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

:a good, basic HT.=20
=20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out
of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

Subject: Astron RS-35M, good idea???

I've been using the same Astron RS-35M since I bought it new in 1984.
I run all of my gear on it at one time! I've had only one problem,
and it was minor. The on/off switch contacts welded themselves in
the ON position. I have a master on/off switch for the station, so
I just ignored the bad power switch on the RS-35M for several years.
Eventually, I replaced it with a better switch. I also added some
heavy duty 5-way binding posts to the front panel for quicker power
connections for temporary use (I still use the big bolts on the back
panel for permanent connections to my main gear). All in all, I'd
say there is probably not a more reliable p/s on the market than the
Astron line. You cannot go wrong with an Astron.

I would AVOID the cheap Pyramid supplies... junk!

I feel the same way as you about the attitude of the sales staff. The
funny thing is that the NEW SALESPEOPLE have a much more friendly
attitude than the salespeople who have been there for a while. I think
that is because the salespeople who have been around really want out but
can't land a better job. So they languish at HRO and take out their
frustrations on the NEW HAMS.I have ordered just recently and had a
positive experience with a New Salesman. BOB FERRARO (owner of HRO)
should dump the salespeople with attitudes or send them to therapy.

Vik Bajaj wrote:
>
> Are there any software modifications that can be done to the TH-79A
> (i.e. without cutting microscopic surface mount components)?
>

There are several mods which involve removing diodes. If you aren't interested in that, cutting the green wire which is accessable by removing the ctscc module will give a modest increase in coverage (118-174, 420-450). Reset the microprocessor afterwards.

HELP ME PLEASE

I own an Alinco DJ-560 which is a pretty useful piece of equipment, now I want to know if anyone out there has a manual for this
Scanning equipment if so drop me a reply on alt.radio.scanner.uk I will appriciate that.

Now for those of you in alt.????hack???? who are wondering why I've posted this on your NG here it is,
I need to know how to interface my scanner with the serial port on my machine
purpose simply to monitor data transmissions on some channels which I have tracked down.

I simply need the schematics or the theory between taking what we all know as data in an audio format and
processing it into rs232 so that software such as terminal with abit of fiddling will be able to interpret what
is flowing over this frequency.

All replys post to alt.radio.scanner.uk thank all in advance

> anything. Norman N8RGR

Rubbish!

A yagi's gain is only achieved by focusing the radiated energy in the desired direction. As a yagi's height above ground becomes very small the take-off angle approaches the vertical and there is very little directivity in azimuth. At that point, it looks very much like a dipole at the same height. To make matters worse, at low heights the yagi's feedpoint impedance diverges from 50 ohms even more than does the dipole resulting in higher losses.

A low yagi can be good for the owner's ego, but only if he doesn't ask too many questions! ;-)

It is a little better if you have autosaves on your backup disks, and
if you have thermo shutdown in case of fan failure, or other causes
of heat buildup.

>I just retired as production manager of the local daily paper, where

Then again, you might take a hint from the audio buffs and go modular, I.E., separate transmitter and receiver, and a TR switch to hiik them up. You can even go a step further and make your own. That CAN be done cheaper than by giving your money away out of your country. You will learn a lot also.

It is just a thought.

I have a single owner FT1000 station for 2500.00 shipped in the lower 48 states and insured. I have all the boxes and the station includes a SP5 speaker and the BPF1 module. It has all the current updates and software. The unit is in excellent condition other than two small scratches on the bottom form running patch cords. The sides. top and front are spotless. If intrested in this nice station please call me at 540-890-1453 or E-mail me at jsjones@rbnet.com. 73, DE-KS4HK, Steve

There was a pretty good thread on the subject a few months ago on this group. Talk centered on auto computer noise and fuel pump noise in newer GM/Ford cars.

FYI The GM Electromagnetic Compatibility folks were at Dayton and we had a nice long talk about noise. (I think I was happier to see them than they were to see me). More to come as I go through the list of things they gave me to do. There is a new part for GM fuel pumps which may help.

3913. MFJ 9420 rig--opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: jkk@galactose.mc.duke.edu
Message-ID: <5lsab8$7e3@newsgate.duke.edu>
Source record: 175125

Been looking at the MFJ-9420 in their catalog; it's a 20-m
non-digital SSB transceiver, single conversion, 12 w output.

I've been thinking that that rig might be a lot of fun to play
with in the car. Hey, I know 100 watts to a dipole isn't the
hot ticket on 20, so 12 watts to a mobile antenna might be worse.
But does anybody out there own one of these rigs? Does it work
well? Is it fun? Can you really use it on 20, or are you
too overpowered?

Appreciate any responses from 9420 owners. Tnx!

Amateur Radio Operators
From the State of Michigan

We the Amateur Radio operators from the State of Michigan do hereby agree to continue to abide by all the rules of Amateur Radio. We pledge to improve the amateur radio bands, and teach new hams joining the hobby the correct operating procedures which should be followed on the amateur bands. By doing this, we are petitioning the American Radio Relay League in our fight to help clean up the language on the Amateur bands, and are looking for civility/politeness in conversations. By showing our support in this petition, we are hoping that the American Radio Relay League can help us fight the language that we are hearing on these bands.

We are asking the American Radio Relay League to help in this clean up by: Hosting several national forums on this problem, and how it can be addressed, We are looking for a promise from the ARRL to report on how enforcement is currently done. We are also looking for a promise from the ARRL to create a sort of self enforcement mechanism, and possibly create a large fine mechanism that will generate enough money to help correct this problem. We realize there is such a thing as freedom of speech but, there are also the words such as civility, and politeness.

I Deborah K. Kirkbride KA8YKK am asking all amateurs in the State of Michigan to please sign this petition, and send it to me at the following address: 1315 Center Avenue, Apartment #1 Bay City, MI 48708. I will in turn when enough signatures are gathered be sending all petitions received to the ARRL.

Please make copies of this petition and pass it along to other clubs, and Amateurs in you area. Please help me in this fight to get the Amateur Bands back on the right track and keep them there.

If you are not from the State of Michigan please feel free to download this off my web page http://www.concentric.net/~ka8ykk change the state name to fit your own and get this started in your own state. You can forward them to me and I would be more than happy to submit them to the ARRL with the State of Michigan.

Thanks
Debbie Kirkbride KA8YKK

3920. Kenwood V7A vs Icom 2710 questions

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: Early Riser <kb9nvh@bluemarble.net>
Message-ID: <3381A9A5.574@bluemarble.net>
Source record: 175132

Hi...I was reading that you own the new TM-V7A and I saw that you really like it....

I have one question...have/can you used the unit for cross banding in full duplex and half duplex....

I just bought the Icom 2710 but now find that it
1)has no alpha numerics
2)Does not include tone squelch and code squelch
3)Cross banding can be accomplished through a cryptic sequence of button pushes..(but still dont know if it can work both in full and half duplex.

Anyway...I may return the radio (bought yesterday in Dayton) and get a Kenwood instead. The deciding factor is if the V7A can Cross band.

Please, your help with this would be very much appreciated.....

(both radios were $509 + tax in Dayton)....bet I pay more to exchange if the dealer will even do it.........

Thanks again for you help...Todd Snyder (KB9NVH)

Chad Johnston, KC8ADE wrote:

> > Can anyone tell me how to crossband with my new IC2710..I have
> followed
> >

Thanks Chad, Well I found the 2710 sequence on Deja News. Its a very similar sequence to yours....(press the VHF and UHF and the SET key at one time (and also the LOW key for zero hang time)

Press SET to disable cross banding..

I'm still wrestling with the idea of tradeing the 2710 for a kenwood TM-V7A. The features of the V7A are similar to the 2710 and the V7A includes the tone squelch and DTMF squelch...($140 dollar value from ICOM). The V7A also includes alphanumerics.

My only question is how does the intermod rejection compair to the ICOM...?

Once I know this I should be able to decide which way to go.....

Thanks for the advice on the cross banding...I really want to use this feature with my HT from home....The Kenwood allows both one way and two way cross banding...not sure about the 2710...the feature is not documented in the manual....(but to be fair..its not mentioned in the kenwood add flyer either)...

Thanks again...Todd (KB9NVH)

David Sholar wrote:

>>TODD - Z1A - you ought to trade that to me for something.

I use the heck out of it and its given me no problems yet...

> On the V7A - Kenwood has a preamp in the standard mode, however you
> can
> use something called AIP (advanced intercept point), that really cuts
> down on the intermod.
>
Humm....so are you saying that Most of your intermod problems (when they occur) are elimiated by the AIP?

I just purchased (two days ago) a icom 2710 and am considering trading it for the V7A because it seems like a much better value...I just wonder what I give up to get all the free features of the Kenwood....I have heard that intermod is worse on the kenwoods than on the Icoms....wonder if this is true????

Thanks for your personal experience....sorry I cant give up my Z1A.....

Todd Snyder (KB9NVH)

Dave wrote:

>
> I don't really need any, as I never transmit out of band or anything,
> but for some reason if it's there, I like to make the mod.
>
hahaha...well...I havent made the mods yet either but one of these days it may become an issue
a friend has a book with the mods in it here it is (but you need a picture to do it)...

800Mhz recieve - install Q12 and Q16 chip of 2F unit (icom part #UN9110)
expanded transmit - Loacte and remove Diode D15
Expanded recieve - Press and hold [B] and [#] and turn on power AND install Q12 and Q16
Cross Band repeat - Set freqs, Press [FUNC] and [D] and turn radio off. Press [MONI] and
[RPT] and [#] and turn radio on. An 'L' appears on the display
Cross Band off - press [MONI] and [RPT] and turn radio ON

Mod book to buy call 818-843-4080

Wonder why the cross band info is not in the official book...like its a secret or something...hummmm
Are the cross banding instructions included in the Kenwoods instruction book?

See ya Later.....Careful with the mods....

I've learned to rely on my tone squelch on my HT...Keeps DX that occasionally
comes in from far off repeaters (on the same local repeater freq) from breaking my squelch.
The other use I have found for the tone squelch option is that it enables you to discover a repeaters tone....very helpful when traveling and
you want to get into a repeater you find along the way that has PL enabled

>I'm not located in a big city, and there are only a

Well..this is certainly a hard decision to make...but I cant find
anything
that the 2710 does that the V7A doesnt do..but the V7A includes options
that cost extra
in the ICOM (DTMF squelch and tone squelch)..Those that have bought it
(V7A) seem real
thrilled with the look after they get it installed..I personally like
the dot matrix
screen (as opposed to the segmented display of all the rest). They all
say that the
interface is very intuitive and by that virtue you end up using more
features that go
ignored on other rigs (just due to the difficulty of getting to them).
But one of the best
features I find of the V7A is the 4 setup memories that let you set up
the radio with completly
different settings and frequencies for different areas you might travel
to...Not sure of all the
specifics but I think that if you travel to different areas often you
can set up that areas frequencies
to be used when you are there..when you get home you just switch back..

The V7A also has Alpah numerics (which I have learned to rely on with
my HT).

I still am just unsure about the front end of each and how well each is
with intermod....Ive got reports
from guys from NY close to manhatten and they get intermod on the
kenwood..(but not like an HT)..I just need to get
an ICOM report from someone in the same area....

Thanks for all your help....still deciding in Bloomington, IN

Todd (KB9NVH)

> I bought the Alinco 610. I got this one because I could remotely

> a dual band ht. this would be handy at times..

Hummm....I was thinking that they all did this (with the DTMF option).
the 2710 does and the V7A does too...

Humm....still deciding....I'm about sure I'm gonna trade my 2710 for
the V7A....but intermod performance is still the question....I need
some direct comparison between the icom and the kenwood.....

Thanks for you help....Todd (KB9NVH)

3921. kenwood V7A vs IC2710 replies

> like it....
>
> I have one question...have/can you used the unit for cross banding in
> full duplex and half duplex....

Todd - Yes the V7A will Crossband repeat. If you mean by hald duplex:
will only crossband repeat one direction - yes you can lock it so that
for example: receive on 2 meters and transmit on 440 only. Also - it
will crossband repeat full duplex - so that for example - signal in on 2
meters goes out on 440. Then signal in on 440 goes out on 2 meters.

The function to invoke crossband repeat is fairly easy.

>

THAT IS A GOOD PRICE. I PAID 559.00 FOR MY V7A AT THE RALEIGH, NC
HAMFEST. BUT DAYTON ALWAYS HAS GOOD PRICES.

GOOD LUCK ON THE TRADE. I THINK YOU WILL BE VERY HAPPY WITH THE V7A.
> Thanks again for you help...Todd Snyder (KB9NVH)

DAVE

TODD - Z1A - you ought to trade that to me for something.

On the V7A - Kenwood has a preamp in the standard mode, however you can
use something called AIP (advanced intercept point), that really cuts
down on the intermod.

I live in Raleigh Durham Chapel Hill area. There are only a few places
where I'm really affected by intermod. It has not been a problem for

me, but Kenwwod seems to have addressed it well for those who do have this problem.

I'd talk to Kenwood if I were you. They have e-mail on their web page now, and got back to me with in a couple of days.

I have two Icom Z1A's and want one more.

Dave

Todd

> > Haha...no way....love that little radio....its served me well as an
> > all purpose radio.
I don't blame you a bit. I just got a second one last week. Get this... I traded a Yaesu FT-50 for the Icom. I know Icom Z1A's have dropped a little in price, but I paid 309 for the FT-50 and 500.00 for my first Z1A, plus the guy paid me 50.00 on top. So I got a deal, and bought the second on just to have a spare and backup.

> I use the heck out of it and its given me no problems yet...
I've had no problems either. But I do forget where I got the mod for it. Do you know where any mods for this radio are?

I don't really need any, as I never transmit out of band or anything, but for some reason if it's there, I like to make the mod.

> > On the V7A - Kenwood has a preamp in the standard mode, however you

> >
> Humm....so are you saying that Most of your intermod problems (when they
> occur) are elimiated by the AIP?

I haven't tried the AIP function yet, but it's there. I really don't get much intermod. Next time I do, I'll try it, but it's rare for me. Since I'm new to the area I don't know if that is a function of how well the radio works, or just that the area is relatively free intermod. But the feature is there, so Kenwood addressed in this rig. I just don't have personal experience.

I wouldn't give up the Z1A either.

Dave

As far as one-way and two-way cross-banding, that can be controlled via the tone decode unit that you have to buy (UT-104). Here's how mine is set up:

Local repeater pair: 146.820 output, 146.220 input

My mobile is set to: VHF: 146.220, with tone decode set to arbitrary freq.
UHF: 446.675, with decode set to 67.0 Hz.

My HT is set to: VHF: 146.820, for monitoring the repeater output.
UHF: 446.675, with 67.0 HZ tone encode.

I normally only have the VHF band "on" on my HT while monitoring. Then, if I want to use the radio, I flip on the UHF band too so I can cross-band. I save some battery by only running one band most of the time on the HT. And I save my mobile some TX work by not making it re-transmit everything it hears on the repeater OUTPUT (that'll kill a CAR battery fairly quickly).

The 2350H can only two-way cross band, unless you encode using tone squelch. Before I installed the tone decode module, my mobile would auto-matically cross-band anyone's 2-meter signal on the repeater input (146.22) that it could hear. Now, it won't do that unless they happen to be working the repeater with tone encode, set to exactly what my mobile is set to, which happens to be 103.5 Hz, arbitrarily, just so people won't kick my mobile into transmit.

Viola! I've suddenly created a one way cross-bad repeater. If the radio would one-way repeat, I wouln't have had to buy the tone squelch unit to achieve this.
Like you said, the 2710 allows one way cross-banding, as well as two-way.

Unless you have to worry about someone accidentally stumbling upon your UHF simplex frequency and using it, you won't even need tone decode. I'm not located in a big city, and there are only a handful of people around with UHF equipment, and I'm currently the only one running cross-band with the dual-band equipment, so I've kinda got the whole band to myself right now. In the larger cities, where there's more UHF activity, it would be a different story.

Good luck with your decision between the Icom and the Kenwood. I love mine, and I didn't really like the look of the V7A, so I didn't even think of changing from my 2350. I did, however, see that 2710 in the inside front cover of one of the magazines I get (not sure, maybe QST or the AES catalog...) and that was quite a thrilling rig to look at. I'm jealous -- I'd love one of those, but for now my 2350 is working quite nicely for me.

73 and best of luck,

Chad Johnston, KC8ADE

> >

Thanks Chad, Well I found the 2710 sequence on Deja News. Its a very similar sequence to yours....(press the VHF and UHF and the SET key at one time (and also the LOW key for zero hang time)

Press SET to disable cross banding..

I'm still wrestling with the idea of tradeing the 2710 for a kenwood TM-V7A. The features of the V7A are similar to the 2710 and the V7A includes the tone squelch and DTMF squelch...($140 dollar value from ICOM). The V7A also includes alphanumerics.

My only question is how does the intermod rejection compair to the ICOM...?

Once I know this I should be able to decide which way to go.........

Thanks for the advice on the cross banding...I really want to use this feature with my HT from home....The Kenwood allows both one way and two way cross banding...not sure about the 2710...the feature is not documented in the manual....(but to be fair..its not mentioned in the kenwood add flyer either)...

Thanks again...Todd (KB9NVH)

AWESOME - I never knew the Z1A would cross-band repeat. Not that I'd use it often on an HT, but that' great. I was looking hard at a Kenwood TH 79 because it would.

Thanks so much!!

'd

> See ya Later.....Careful with the mods....

To turn my one of my Z1A's (the one that already has mod's) off for Cross band repeat I had to:

Press [MONI] and [RPT] and [#] and turn radio on.

"L" flashes when ever Crossband is active.

Are the cross banding instructions included in the Kenwoods instruction book?

YES - the Kenwood fully spells it out.

'd

I bought the Alinco 610. I got this one because I could remotely control frequency and memory selection by using the keypad on my ht. I have a 440 ht and use it for crosbanding back through the vehicle when I am on the fringe of coverage. It works fine but I would like to get a dual band ht. this would be handy at times..
Good luck

Ken N4HWL

Has anyone heard of a means of using a computer link to program a DJ-580T.
(It's awful easy to reset them!)

I heard there was via the SP/Mic jacks, but, have not been able to find anything in WWW sites, newsgroups, or old magazine articles.

Thanks,
Dave WD8RWW

From: "Michael Mello" <kq7e@sprynet.com>
Subject: HELP: Rpt noise when windy!!

Sounds like the hardware (if it's rusty, that's you're problem) is acti=
ng

as a non-linear rectifier. When the different transmitters key, the RF=

mixes in the rusty joints, and you now have some rather spectacular, al=
beit
unwanted, RF products floating around. These may not be evident on UHF=
=2E =20

I had a Phelps Dodge Station Master in a fiberglass radome go bad, and
would produce the same results. What died were a few of the antenna
elements inside the radome, which is really a PITA to get into. They w=
ere
intermittent, flexed about, and whenever the TX keyed up, generated
crackles, noises, and non-linear products all over God's creation. Sam=
e
effect. So, that's two things to look at, rusty hardware (replace it, =
bond
around it, etc) or bad antenna (take it down and fix/replace it). =20

Now, if you are using the DB Products, (say a DB214) you'll definitely =
want
to bond the top mast to the bottom mast with a few pieces of good braid=
=2E=20
The two pieces, while fitting into one another, do get corrosion in the=

joint, and give the same wonderful noise problems.

Good luck!

>KE6IZS
>Mobile Radio Tech
>
>
I've had my Kenwood V7A for a month now. Mounted it day one in the
car and it has done great. I like the audio, and the features. My
only complaint about the audio is POSSIBLY my problem. I have a
speaker floor mounted, and when I drive 70 with the windows open, I
really have to crank it up to hear. So I'm sure it's my speaker

location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary. =20

Good luck Joshua!!

>What about mail order? Require a photocopy of a Ham license.

You are asking amateur radio dealers to become policmen then? It's
not up to dealers to determine or to enforce any rules on who can and
cannot operate transmitting equipment. And, not all hams carry copies
of their amateur licenses when they go into retail establishments...do
you refuse to sell to them? This is bucket 'o worms material.

Also, not ALL illegal transmissions are caused by unlicensed
operators. I'd venture to say the vast majority of illegal
transmissions are caused by licensed individuals or groups. Either
for some political agenda, personal vendetta or the like. With more
and more folks getting into the hobby we are going have a wider
diversity of personalities -- good and bad. MORE - this means of both
types - hence a greater number of infractions.

I have worked in the amateur retail business. I have sold
transmitting equipment to unlicensed individuals. There was and is no
law telling me to do otherwise. As a matter of fact it was my
understanding I would have been breaking laws by refusing to sell to
anyone.

We (as hams) don't really like this but for now there is not much we
can do about it except to remain self-policing and to do what it takes
- legally - to squelch these unhappy, psychologically challenged
persons. =20

This same topic seems to come up about every six months or so and has
been hash and rehashed. If you want to use analogies, etc. what about
someone with a Technician license? Not a Tech Plus mind you. Should
that person be prohibited from owning a piece HF equipment? They
don't have a license for it.... Should radios be manufactured for
each class of amateur license? So, when you upgrade your ticket you
have to upgrade your equipment also? If someone plans to become a
ham, why can't they have the transmitting equipment already in their
possession? There are a lot of things to think about. This truly can
be a bucket 'o worms.

> Jimmy Kahn, WA2ILK

Yes, I'd love to see the laws change where one MUST show proof that the=
y
have a ham license before they could purchase any ham transmitters. As=
for
mail order, if I place a phone order as KF6JHG, the call sign database
will have my address. If I want them to ship to another address, then =

a fax (or photocopy) of the license would be required.

I'll guess that Radio Shack wouldn't like that law. It might cut a lit=
tle
into their sales. However it would cut down on the sales of equipment =
to
the jammers and jerks.

I'm sure that some Bozo who wants to buy the equipment will find a way =

around the system, but such a law would slow or stop most of them.

73,

Bob KF6JHG

From: ve1rj@ns.sympatico.CA (Bill McFadden)
Subject: Yeasu FT-736R

I am wondering if anyone has any answers to a question I have about=20
the FT-736R.

I have just put in the 6M module and have played around a bit with=20
the scanning option on the rig. I want to be able to scan from say=20
50.100 to 50.200. During my research I have to have the squelch up in=20=
=0Aorder for it to scan properly. Playing with the RF gain and the=20
Squelch I was able to get it to scan satisfactorly and it is able to=20=
=0Apick up weak stations and stop scanning. I am using the pause button=
=20
in so it only pauses for 5 secs then carries on. Stopping almost=20
immediately again because of the signal. This is good because I know=20=
=0Asomeone is on there.
However, my biggest problem is the bloody beep it makes when stopping=20=
=0Athe scan, when starting over the scan (using pms) or even when=20
hitting buttons.=20

Is there anyway in turning this beep off?

Tx in advance

Bill (VE1RJ)

Subject: FS:Very nice Yaesu FT1000 Station!

I have a single owner FT1000 station for 2500.00 shipped in the lower
48 states and insured. I have all the boxes and the station includes a
SP5 speaker and the BPF1 module. It has all the current updates and
software. The unit is in excellent condition other than two small
scratches on the bottom form running patch cords. The sides. top and
front are spotless. If intrested in this nice station please call me
at 540-890-1453 or E-mail me at jsjones@rbnet.com. 73, DE-KS4HK, Steve

Subject: Heath manuals

Manuals may still be available from Heath. I purchased two photocopies=

of manuals from them in Oct. '95 after tracking them down through
directory asistance. The address on my invoice is
HEATH REPLACEMENT PARTS
455 RIVERVIEW DRIVE
BENTON HARBOR, MI 49022.
Sorry, but the phone number is not listed on the invoice. The copies
cost me about $25 each and were for manuals copyrighted 1963.

From: "Rick Pemble" <pemble@ix.netcom.com>
Subject: UHF antenna plans

Good for you in wanting to make your own antenna! Channel 25 has an au=
dio
carrier freq at 541.25 MHz (video extends 4.5MHz below). The ARRL hand=
book
and the ARRL Antenna handbook have how-to-build articles for antennas i=
n
the 70cm (420-450MHz) band. They include yagis, corner reflectors, etc.=

the build-to examples give frequency/dimension guides that will make it=

very easy for you to build
one for 540 MHz instead (it will be a little smaller than the ham freq=

versions).

If you can't (or don't want to) buy one (handbook) -- the local library=

(community or university) will have a copy.

30 miles isn't tooooo bad for those frequencies (depending on terrain),=
so
anything should improve. Ghosts are typically from
reflections so you might benefit from directivity more than gain.=20

Go ahead an experiment -- remember the age old quote "All antennas work=
-
some just better than others"

Cheers

>
>Been looking at the MFJ-9420 in their catalog; it's a 20-m
>non-digital SSB transceiver, single conversion, 12 w output.
>I've been thinking that that rig might be a lot of fun to play
>with in the car. Hey, I know 100 watts to a dipole isn't the
>hot ticket on 20, so 12 watts to a mobile antenna might be worse.
>But does anybody out there own one of these rigs? Does it work
>well? Is it fun? Can you really use it on 20, or are you
>too overpowered?

I don't own a 9420 myself, but the QST review on it last year
was quite favorable. I've heard a couple of them on the air,
and they sounded good (when the KW+ boys weren't stomping on
them).

As a full-time QRPer, I can tell you that it's a real kick to
operate with low power, and it's a big-time challenge, but be
prepared for some serious frustration. It is just about not
possible to compete with the big guys on SSB when operating
QRP (actually, it's darn hard even with 100 Watts). However,
the contacts you do make will be far more rewarding than the
ones you make with a KW, which is like shooting fish in a
barrel. Try it! If you do buy the 9420, be sure to also get
the CW adaptor and try some QRP CW (much easier than QRP SSB).

73 / 72,
Dean K5DH/QRP -- "all QRP, all the time!"

> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I can
tell you that the Yaesu FT2500M is a superb radio. Lots of nice features,
plenty of power, very rugged, and the best intermod rejection of any rig
I've ever used. Works very well base, mobile or packet. Just one ham's
opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

Subject: Need IC-25a repaired/replaced

Our school/scout IC-25a packet station died due to a bad ant. Our group is
out of money for this year and would like to find someone who could fix or
replace the radio for next to nothing. I believe the output driver is good
but the finals unit is shot. If you can help please contact me.

Subject: News Rover -- Searches newsgroups for what you want - 218 0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

Subject: **********PLEASE HELP ME WITH TEMPO S1 HT**********

Hi,

I recently atteneded a hamfest and bought a Tempo S1 2 meter HT for
$10. The unit came with the battery, leather case, and manual. The ve=
ry
first time I opened it up, I gave the unit 9.5 volts of power from the
power supply, and it worked. But then a wire ripped off, so I soldered=
it
back to where I thought it would go. I charged the NiCad battery, and
closed up the unit. When I went to turn it on, I found that the unit
won't transmit, the TX LED lights up but no RF power is emmited. Then =
I
tuned the radio to a local repeater which was in use at the time, and a=
ll
I heard was the rushing static. Can someone possibly point me in the
right direction? I thought I might have accidentaly grounded the anten=
na
wire, but I went though it all again and still no diffrence. If anyone=

has any ideas at all on this, please e-mail me, since I have very poor
access to the newsgroups (I have AOL.) Also any info on the Tempo S1 H=
T

is also very welcome.

Thanks in advance,

I've had my Kenwood V7A for a month now. Mounted it day one in the car and it has done great. I like the audio, and the features. My only complaint about the audio is POSSIBLY my problem. I have a speaker floor mounted, and when I drive 70 with the windows open, I really have to crank it up to hear. So I'm sure it's my speaker location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary. =20

Good luck Joshua!!

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =
and=20
>one-way repeat functions". What is the one-way function? Sounds like=
=20
>a single band repeat function, but I don't want to make assumptions.

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

=20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out
of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

Subject: Astron RS-35M, good idea???

I've been using the same Astron RS-35M since I bought it new in 1984.
I run all of my gear on it at one time! I've had only one problem,
and it was minor. The on/off switch contacts welded themselves in
the ON position. I have a master on/off switch for the station, so

I just ignored the bad power switch on the RS-35M for several years. Eventually, I replaced it with a better switch. I also added some heavy duty 5-way binding posts to the front panel for quicker power connections for temporary use (I still use the big bolts on the back panel for permanent connections to my main gear). All in all, I'd say there is probably not a more reliable p/s on the market than the Astron line. You cannot go wrong with an Astron.

I would AVOID the cheap Pyramid supplies... junk!

Subject: FS: Icom IC728 Station

Hello all,

I have a new in the box IC728, purchased in February, along with
the AT160 auto tuner, UI7 AM/FM module, and the FL100 500hz CW
filter.

This is a full featured 100W rig, 100Khz to 30Mhz, triple
conversion receiver, AM/FM/CW/SSB, passband tuning, speech
processor, programmable tuning steps, NB/PreAmp/Attenuator, the
works. All in a compact package. I paid $1650, asking $1250.

All items are new, in the box, and complete.

Thanks es 73's,
Don Rasmussen WB8YQJ/6

I feel the same way as you about the attitude of the sales staff. The
funny thing is that the NEW SALESPEOPLE have a much more friendly
attitude than the salespeople who have been there for a while. I think
that is because the salespeople who have been around really want out but
can't land a better job. So they languish at HRO and take out their
frustrations on the NEW HAMS.I have ordered just recently and had a
positive experience with a New Salesman. BOB FERRARO (owner of HRO)
should dump the salespeople with attitudes or send them to therapy.

> Are there any software modifications that can be done to the TH-79A
> (i.e. without cutting microscopic surface mount components)?
>

There are several mods which involve removing diodes. If you aren't
interested in that, cutting the green wire which is accessable by
removing the ctscc module will give a modest increase in coverage
(118-174, 420-450). Reset the microprocessor afterwards.

3939. Value of Heathkit Single Bander Transceiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: mto@world.std.com
Message-ID: <864053539.13286@dejanews.com>
Source record: 175151

Hi,

I have a Heathkit HW-12 SSB transceiver that I assembled from kit form back in the 60's. It always worked perfectly, but the last I used it was about 15 yrs ago. I still have the manuals and homebrew ps for it. I'm thinking now of selling it, passing it on. I've been out of touch with the ham radio world for years now.

Anyone have any estimates of what such a unit might be worth these days? What would be a fair asking price? Is such old equipment still valued?

It's the HW-12, btw, for 75 meters. Covers 3.8 - 4.0 Mhz.

Please reply to my email address. Thanks.

Mike

3941. FS: Packet Setup for $25 shipped!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: cobra295@ix.netcom.com
Message-ID: <5lt7ai$jqk@dfw-ixnews8.ix.netcom.com>
Source record: 175153
Cross-posted to: rec.radio.swap,rec.radio.amateur.equipment

FS: Packet setup for $25

I have for sale a Bell 202 modem, plus all the parts
and instructions to put this on the air for packet
use. It works much like the new BayComm modems, and
in fact uses the same software. The modem is external
and plugs into the wall. All parts are included to
wire your HT or mobile radio. Basically, the only
thing you have to do is create the cable to go from
the modem to the radio using the supplied components
to detect the PTT and feed the audio. Also a regular
old 25pin cable is needed for between the computer
and the modem. You don't need to be an EE to figure
out this little homebrew project, but a simple knowledge
of soldering, etc. is suggested. A good amount of literature is
included with articles from ham radio magazines as well as
schematics on how to make the patch cable. I'm
reselling this item as I bought it myself a few months
ago for the same price. I plugged in the modem to the
wall, and it turns on and appears to work fine. After
I received the equipment, I never got the chance to
make the cable and get it on the air since. At this
point, my packet connections on the radio are being
used by an autopatch, so I don't really have the means
to use this item conveniently. It can't compete with
high-end TNC's, but hopefully someone else
can use it to get started on packet for a low price.
Included is the software, modem, parts, literature, and
schematics. I ship only USPS, and only in the CONUS
with a prepaid USPS MO. If you would like to purchase
or have a question, please email reply me. Thanks.

3942. Amplifier repairs in Chicago area?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-20 00:00:00 UTC
From: Todd Little <little@ameritech.net>
Message-ID: <338222A1.68@ameritech.net>
Source record: 175154
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I need to have some amplifiers worked on as I have neither the
equipment, time, or manuals to work on them myself at the moment.
The amps are made by Mirage, KLM, and Tokyo Hy-Power and
cover 2, 220, and 432. They may only need minor adjustment,
but I'd like to get them checked out and ready to go for the
upcoming VHF QSO Party and have other areas I need to spend
my time (such as building antennas, wiring harnesses, antenna
supports, radio supports, power and battery arrangements, etc.)
for my rover entry. I'm in the northwest suburbs of Chicago
and willing to drive a bit to take them some place that
can work on them quickly and do a good job. AES is too back
logged to do the work. Any suggestions greatly appreciated.

73,
Todd

Thank you for reading this post. I do not know the proper name for the part I am looking for but I will describe it the best I can.

I am looking for the part of the R7 antenna that the coax connects to. This unit is box shaped and also connects to the antenna itself.

Please reply with price and location.

I need a 2m tuner for an antenna that is only partially resonate on this band. If you know something on this, i.e. what's available ect please let me know. I'm using a munibond antenna that stops being resonant at about 146 MHz. It's too narrow banded for repeater work and I don't want to put up an other antenna. Got any ideas? Thanks....

Eric:

I have been running an RS35M since 1993.=20
I also bought mine with extra capacity in mind.
When you draw 35 amps, that does not mean that you are drawing that muc=
h on the=20
120 volt circuit that supplies it. I run my supply on a 15 amp circuit,=
with a=20
computer, and other things on the same circuit, and have never had any =
problems.

Astron makes some very nice power supplies.
You may want to take a look at their switching power supplies.
I bought one for my IC706. it is about the same size as the 706, and ve=
ry light=20
weight. It puts out 20 amp continuous, and 25 intermittant. I think the=
model #
is=20
SS25. there is also one that puts out more, 35amp intermittant, I think=
=2E
The 20 amp one was around $100-$125.
Apparently not too many people know about the switchers made by Astron =
yet. They
have=20
been out only a few months, I believe.

Bought mine at Amateur Electronic Supply.

>and a much sought after certification in the private/commercial world.=

Big difference -- Mil Spec is a standard set by others, ISO900x is a
certification based on a self-imposed standard, the standard itself
not being an item on which judgement is passed.

What's the difference you ask?

ISO900x means that there is some quality control procedures in place
and they are being followed by the manufacturer. The designation,
much as the manfacturer's would like for you to believe otherwise,
does not mean superior or better quality -- only that a quality
system is in place and is being followed. It may be poor quality
control, but if they have quality control and it is being followed,
they can recieve the ISO designations.

Much the same way with hospital accreditations (my area of
expertise) -- the Joint Commission for the Accreditation of
Healthcare Organizations doesn't assess the *success* of the
policies, nor the *quality* of the policies -- just their existence
and documentation that they are being followed.

From: n2ah@sprynet.com
Subject: Any HTs with Rcv Attenuator?

Does anyone know of an HT that has a selectable receive attenuator? Seems like it should be easy enough
to include one and it would permit operation with a roof-top antenna without a lot of intermod.

Any info on this would be appreciated.

Thanks,
Art Harris, N2AH

My first bet would be on a shorted rectifier diode. If it's easy, you
might disconnect everything from the positive lead of the bridge and
see if the fuse still blows; that'd eliminate a bunch of other
possibilities.

If it's not easy, I'd just take an ohmmeter to the diodes.

With all due respect, to say something is "better" is subject to what's important to the person. _BOTH_ units are very good.

If smaller size and dual bands are critical to a person, then the Yaesu FT-50RD is the better unit.

However, if low cost and an easy to operate unit are important to a person, then the Radio Shack HTX-202 is ideal for that person.

My friend Bill (W6DIV) owns a Yaesu FT-50RD. He likes the small size and dual band ability.

I own a Radio Shack HTX-202. It may not be small or sexey, but it sure does what I want it to do.

I guess that when someone asks, "What's the "best" HT to buy?" It's a matter of what factors are critical to them:

Cost
Single or Dual Band
Size & Weight of the unit
. . .

73,

Bob KF6JHG

Although I love my HTX 202, out-of-band receive is the reason I'm looking for
a new primary HT. Weather changes can be a great thing to hear about
when you travel. Other than that though, I can' complain about the RS HT.

dgsholar@gte.net - KE4YDY wrote:
>> While the V7A is not built to "Mil Spec" standards as some Yaesu's
>> advertise, it is built to ISO 9002 standards. These are very tough
>> and a much sought after certification in the private/commercial world.

Actually, I believe ISO9000 and its components, such as ISO9002, are
not product specs in any form. They are process certifications (for
manufacturing, serivice, etc.), and are simply a certification that
you have a quality system in place whereby you (1) say what your
process is (2) document it (3) follow it (4) document that you
followed it. You could make cement lifejackets by ISO9002 as long as
you follow these guidelines. This is not a knock on the Kenwood radio
at all, but as one who has gone through the ISO9000 certification
process, I must point out that it does not in any way assure good
products.

no.spam@anytime.at.all "John C. Smith" writes:

> 2. Anyone know of a good, remotely tuned antenna tuner for a long wire,
> that can accommodate 200w?

I'm not sure what `remotely tuned' implies. But if you include
automatic tuning in that, then you may be interested to know that I
learned from SGC at Dayton this year that the company has now upped
the rating on the SG-230 to 200w. This rating change is based solely
upon more recent testing and analysis and not on any component
changes, and so this higher rating applies to SG-230's already put
into the field under the previous 150w rating.

If in doubt, check with the company.

From: kc4srn@aol.com (KC4SRN)
Subject: Simplex Phone Patch???

Simplex patches can go as far as you can. Plus certain ones can be
"attached to a repeter" just by tuning it in. Sound quality is perfect.
Just like a repeter located. auto-patch. I have the CS-900 for sale. Best
thing is, you are in control of the patch and it's use. It's between you
and the FCC. It's also much more private because you can tune it to any
frequency you prefer and change it often. Here's my ad.

The one I have for sale is the best thing going. Not because I have it for
sale, but that is the truth. CSI makes the patch you want because it
covers all the things you will run into. The CS-900 is a VOX Simplex
patch. But, that doesn't mean it can't work with/on a (duplex) Repeater.
See the following.

CSI CS-900 VOX SIMPLEX (or repeater) AUTO TELEPHONE PATCH (Interconnect).
Makes your HT like a Cell Phone. Works extremely well. Dual-bander not
needed at base. 90 speed dials, two level safety codes. Built in

programable keypad and volume adjustments. Needs only a mic and audio out conection on any base radio (or HT). Phone line plugs right into the back. Multiple and flexible options like notification if someone is on the base phone, and when they are done. Range over 15 miles simplex (30 mile across circle) on 2m band. More simplex range with nice base antenna, more height or an amplifier. Ever more range through a repeater. Just tune the rig to a wide coverage repeater (A club could run this patch from a home). Connects to any rig so use it with a LOW COST spare 2m (220 or whatever). Easy volume adjustments and BUILT-IN keypad. Of course CW ID makes it legal. Dispach and selective calling too. It's your choice, YOU are the control operator. Plus, a long list of other professional features. With a cross-banding rig in your car, you can go all over town making AND RECIEVING calls on simplex with your HT on low power 440! Set it to ringout, send DTMF (touch tone) code or use a silent PL tone, sent to your HT. Imaculate $299

So, this is a computer system working as your patch not just a complicated curcuit. The is the deluxe, everything has been thought out kind of patch. It's made into a small box about the size of a mobile rig. I know you will LOVE it.

I also have the following for sale by the way......

$149 - Mother board, INTEL PENTIUM 90 mhz,*PCI* & ISA bus with CPU and fan. Upgrade your computer today. Takes 72 pin memory. (see PCI card below). Like new with intel manual.

$59 - Card - SVGA *PCI* high quality video. **$39** with above motherboad!

$29 - 14.4K fax modem with manuals **$10** with MB & Video card.

Subject: Need manual and schematic for Johnson Viking II

Greetings, BA lovers!

I picked up a Johnson Viking II this weekend at the Fort Worth swap meet for the paltry sum of $25. It's all there and in restorable condition. What I didn't get was a manual and schematic. Anyone have a book on the Viking II that I can borrow and copy? I promise to treat it carefully and return it promptly, and I'll pay all of the postage costs both ways. I'd prefer to do the copying myself.

Thanks and 73!

Subject: TS 130 product detector

Anyone have a 130 where they replaced the cheap diodes in the product detector circuit with the schottky diodes? I have a 130V where they were replaced, and the audio out of it is a bit rough. I have used the little cap on the board to try to balance the detector, but can't get in the range, it seems to want very, very small values to get the audio smoother. Any thoughts? I suppose I could just get a very, very small cap and stuff it in there in place of the variable (and may do that), but wonder if I should understand what is going on.

I agree with Dean. I'm also curious as to where he got the replacement switch. Mine is bad too. I suspect if I called Astron I could get a replacement but haven't gotten around to it.

My Astron failed when it was about a year old. Then I couldn't run anything in the shack since I had consolidated all my power supplies into one 35M. I was beginning to wonder if this was a mistake until I called Astron. I described the symptoms to them and they said that of course they'd be willing to do a repair on it, but they suspected it was a bad voltage regulator chip that I could buy at Radio Shack for a buck if I would prefer to do that rather than send it back to them. They told me where to find it and I was pleased to find it was socketed. I went down to RS, bought a new one for about a buck and was back on the air within an hour. I really appreciate the fact that Astron didn't treat me like a dolt.

I also agree with Dean's opinion on the pyramid supplies. Stay away from them. I had one with a bad transformer once and it wasn't pretty.

I owned one for years and loved it. When the finals are new it made
about 500 watts with a pretty good receiver for its era. The Mark III
was the last one made before the changed the style to the GT-550
which had a different box.

It's about the same vintage as the Swan 500 (late 60s). Enjoy it, it
will be a collectable some day.

Subject: Astron RS-35M, good idea???

I've been using the same Astron RS-35M since I bought it new in 1984.
I run all of my gear on it at one time! I've had only one problem,
and it was minor. The on/off switch contacts welded themselves in
the ON position. I have a master on/off switch for the station, so
I just ignored the bad power switch on the RS-35M for several years.
Eventually, I replaced it with a better switch. I also added some
heavy duty 5-way binding posts to the front panel for quicker power
connections for temporary use (I still use the big bolts on the back
panel for permanent connections to my main gear). All in all, I'd
say there is probably not a more reliable p/s on the market than the
Astron line. You cannot go wrong with an Astron.

I would AVOID the cheap Pyramid supplies... junk!

Hello all,

I have a new in the box IC728, purchased in February, along with
the AT160 auto tuner, UI7 AM/FM module, and the FL100 500hz CW
filter.

This is a full featured 100W rig, 100Khz to 30Mhz, triple
conversion receiver, AM/FM/CW/SSB, passband tuning, speech
processor, programmable tuning steps, NB/PreAmp/Attenuator, the
works. All in a compact package. I paid $1650, asking $1250.

All items are new, in the box, and complete.

Thanks es 73's,

I feel the same way as you about the attitude of the sales staff. The
funny thing is that the NEW SALESPEOPLE have a much more friendly
attitude than the salespeople who have been there for a while. I think
that is because the salespeople who have been around really want out but
can't land a better job. So they languish at HRO and take out their
frustrations on the NEW HAMS.I have ordered just recently and had a
positive experience with a New Salesman. BOB FERRARO (owner of HRO)
should dump the salespeople with attitudes or send them to therapy.

There are several mods which involve removing diodes. If you aren't
interested in that, cutting the green wire which is accessable by
removing the ctscc module will give a modest increase in coverage
(118-174, 420-450). Reset the microprocessor afterwards.

Bob

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig
>
> Yeasu FT2500M
> Icom IC-2000
> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I =
can
tell you that the Yaesu FT2500M is a superb radio. Lots of nice =
features,
plenty of power, very rugged, and the best intermod rejection of any rig
I've ever used. Works very well base, mobile or packet. Just one ham's
opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

From: 218@sandh.com
Subject: News Rover -- Searches newsgroups for what you want - 218 =
0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for
messages about items that you collect. Once you tell it what to look =
for,
News Rover will scan a set of newsgroups and collect all messages that
contain what you are searching for. For example, if you are interested =
in
messages related to slide rules or calculators, you could specify a =
search
expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any
messages that match the search expression. This searching is completely
automatic, so it works while you sleep, work, or play. The search
expressions can be as simple as a single word, or they can be complex
expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables
newsgroups. You can use it to search for family names in genealogy
newsgroups, or for any other type of information in any newsgroups you
choose. And News Rover is ideal for picture newsgroups. It decodes =
both
UUencoded and MIME base64 images, and it combines and reconstructs =
binary
files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they =
are

available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help
you find a needle in a haystack and eliminate spam. You can even
use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of =
newsgroups,
selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates
automatically.

o Saves parts of multi-part files, searches for the missing
parts, and rebuilds the entire file when the last part arrives.
It even combines parts found on different days and in different
newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only
when you don't need it.

o Automatically dials the provider and hangs up the phone when it
is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view
pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup =
junkies!
With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. =
I
don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, =
and
it beats Plukit-32 hands down!!

Aw, come on! We've used a light duty TV rotor for a HUGE TV antenna
on a tower. It was installed 16 years ago, and still works fine. I
haven't even replaced the wires yet (although I should).

Subject: Yaesu FT-901 DM info?

I just purchased a Yaesu FT-901 DM HF rig at a swapfest. Came with a
manual but there's no mention of when it was manufactured. Does anyone
know when they built this thing? Seems like a nice rig, but *heavy* =
(about
40 lbs). If you know when it was built and how much it retailed for, I'd
appreciate your sharing that info with me. (I'm curious who's older -- =
me
or it!)

Please reply by email--thanks!

Dave KB0YSN

Subject: **********PLEASE HELP ME WITH TEMPO S1 HT**********

Hi,

I recently atteneded a hamfest and bought a Tempo S1 2 meter HT for
$10. The unit came with the battery, leather case, and manual. The =
ve=3D
ry
first time I opened it up, I gave the unit 9.5 volts of power from the
power supply, and it worked. But then a wire ripped off, so I =
soldered=3D
it
back to where I thought it would go. I charged the NiCad battery, and
closed up the unit. When I went to turn it on, I found that the unit

won't transmit, the TX LED lights up but no RF power is emmited. Then =
=3D
I
tuned the radio to a local repeater which was in use at the time, and =
a=3D
ll
I heard was the rushing static. Can someone possibly point me in the
right direction? I thought I might have accidentaly grounded the =
anten=3D
na
wire, but I went though it all again and still no diffrence. If =
anyone=3D

has any ideas at all on this, please e-mail me, since I have very poor
access to the newsgroups (I have AOL.) Also any info on the Tempo S1 =
H=3D
T
is also very welcome.

>Mobile Radio Tech

I've had my Kenwood V7A for a month now. Mounted it day one in the
car and it has done great. I like the audio, and the features. My
only complaint about the audio is POSSIBLY my problem. I have a
speaker floor mounted, and when I drive 70 with the windows open, I
really have to crank it up to hear. So I'm sure it's my speaker
location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.=3D20

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them. =3D20

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice. =3D20

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary. =3D20

Good luck Joshua!!

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

:Standard, ADI, or ???=3D20
:
:Also, what features should I look for (and what do they do?) in=3D20
:a good, basic HT.=3D20
=3D20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out
of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig

>

> Yeasu FT2500M

> Icom IC-2000

> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I =
can

tell you that the Yaesu FT2500M is a superb radio. Lots of nice =
features,

plenty of power, very rugged, and the best intermod rejection of any =
rig

I've ever used. Works very well base, mobile or packet. Just one =
ham's

opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

From: 218@sandh.com

Subject: News Rover -- Searches newsgroups for what you want - 218 =
0517040010=20
FRK

Automate your =
collecting=20
research!

News Rover is the ideal tool for searching through Usenet newsgroups =
for

messages about items that you collect. Once you tell it what to =
look=20
for,

News Rover will scan a set of newsgroups and collect all messages =
that

contain what you are searching for. For example, if you are =
interested=20
in

messages related to slide rules or calculators, you could specify a =
search

expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect =
any

messages that match the search expression. This searching is =
completely

automatic, so it works while you sleep, work, or play. The =
search

expressions can be as simple as a single word, or they can be =
complex

expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables

newsgroups. You can use it to search for family names in genealogy

newsgroups, or for any other type of information in any newsgroups =
you

choose. And News Rover is ideal for picture newsgroups. It =
decodes=20
both

UUencoded and MIME base64 images, and it combines and reconstructs =
binary

files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, =
work,=20
and play.

o Automatically downloads messages and attached =
files=20
so that they are

available for instant access when =
you are=20
ready to review them.

o Decodes attached files of all types =
(UUencoded and=20
MIME base64).

o Displays a picture gallery of collected =
thumbnail=20
size images.

o Selects messages based on include and/or =
exclude=20
criteria to help

you find a needle in a haystack and =

eliminate spam. You can even

use complex selection expressions =
with AND,=20

OR, NEAR and NOT.

o Supports multiple "interest =
groups," each=20
with sets of newsgroups,

selection expressions, message =
database,=20
and picture gallery.

o Remembers files already extracted and =
eliminates=20
duplicates

automatically.

o Saves parts of multi-part files, searches for =
the=20
missing

parts, and rebuilds the entire file =
when=20
the last part arrives.

It even combines parts found on =
different=20
days and in different

newsgroups.

o Allows you to post Usenet messages and send =
e-mail=20
messages.

o Operates on a schedule you set up to use your =
phone=20
line only

when you don't need it.

o Automatically dials the provider and hangs up =
the=20
phone when it

is finished.

o Works with almost all Internet providers and =
news=20
servers.

o News Rover is multi-threaded so you can read =
messages=20
and view

pictures while it downloads and =
decodes=20
more messages.

News Rover was designed and written by real-life Usnet newsgroup =
junkies!

With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

&=
nbsp; =20
http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. =
I

don't know how much time I saved. I give your product two thumbs =
up!!!

T.B. says: "Great Job!!! I tried your software for the first time =
today,=20
and

it beats Plukit-32 hands down!!

>KE6IZS

>Mobile Radio Tech

I've had my Kenwood V7A for a month now. Mounted it day one in =
the

car and it has done great. I like the audio, and the features. =
My

only complaint about the audio is POSSIBLY my problem. I have =
a

speaker floor mounted, and when I drive 70 with the windows open, I

really have to crank it up to hear. So I'm sure it's my =
speaker

location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head =
on

dashboard and radio under dash - speaker on floor. So my liking =
the

audio may be from the use of external speaker, not internal one. =
But

I use external speaker on every rig I have except HT's.=3D20

You mentioned the receiver - the V7A has, in effect, a pre amp that

you can turn on or off for receive. Kenwood calls it AIP or =
Advanced

Intercept Point. I've had no problems in hearing far stations, =
and

can usually get back to them. =3D20

While the V7A is not built to "Mil Spec" standards as some =
Yaesu's

advertise, it is built to ISO 9002 standards. These are very =
tough

and a much sought after certification in the private/commercial =
world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left =
it

when you turned it off, it powers up exactly the same way. If =
you

turned it off scanning, it comes back on scanning. That is nice. =
=3D20

2. There are 4 selectable "Program Modes" that you can =
store=20
many

operating features in. I use it primarily for Day/Night =
changes. =20
In

day mode, I have the display bright and the "beep tones" =
low. In=20
the

night mode - Display is dim and beeps are loud. There are many =
other

ways you can use these settings, even changing the step rate per =
band.

I don't think you will be disappointed with the V7A. There is =
only

one feature I would consider missing, that is the MUTE. When

listening to 2m and a 440 station comes on, neither band will mute

automaticly regardless of which is primary. =3D20

Good luck Joshua!!

Sounds like=3D

=3D20

>a single band repeat function, but I don't want to make =
assumptions.

The one way cross-band repeat is not an "in-band" repeat, but =
rather=20
a

feature that allows the radio to retransmit a signal received on one

band to the other, but not the other way. I other words, you can set

the radio to retransmit signals received on a 440 frequency on two

meters, but not retansmit signals received on 2 meters on 440.

Vice-versa, as well of course.

regards, Don

:a good, basic HT.=3D20

=3D20

You should avoid any HTs which can transmit outside of the 144 to

148 Mhz amateur band. It is legal for you to use such a radio

since amateurs are expected to have enough knowledge to avoid out

of band txing. However, there is no point in being able to tx out

of band and having a HT that can not do so will avoid the temptation

and possible accidental out of band txing.

From: k0vkh@rushmore.com (Dick Uhrmacher)
Subject: HAM EQUIPMENT FOR SALE (20 May)

Following is an updated list of Ham gear I'm parting with. The
prices are negotiable, and I'm mainly interested in
selling everything on this list, so there will be some bargains.
Manuals and documentation furnished where available. Here's the list:

1. CDR Rotor Control Box. Series 4516, for use with HAM-M rotators.
$20.00, plus $5.00 UPS freight.

2. Complete RTTY, CW and ASCII digital station. INFO-TECH M-300C
Keyboard.
Transmits RTTY, CW and ASCII at all normal speeds and shifts.
INFO-TECH
M-200F, RTTY/CW/ASCII Demodulator. Copies all standard speeds and
shifts,
and has video output, printer support, etc. Taxan 14" Amber Video
Monitor.
Complete system $200.00, plus $25.00 UPS freight.

3. "Digi-Designer" Work Station. Complete digital IC test and
construction
aid, with internal clock, (1 to 100K speeds), four logic switches, two

pulsers, IC test and assembly block. Built in 110VAC power supply, (TTL
voltages output). $25.00, and $5.00 UPS freight.

4. Homebrew WB4VVF Iambic "Memory Keyer". $20.00, $5.00 UPS freight.

5. Homebrew WB4VVF Iambic Keyer, with built in clock and 10 minute
timer. $20.00, $5.00 UPS freight.

6. 5-Volt, 1 Amp, "Calectro" Regulated TTL Power Supply. $10.00, $3.00
UPS freight.

7. HAL SPT-2 "Spectra-Tune" Digital Tuning scope. Ideal for tuning RTTY,
AMTOR, PACTOR, Clover, CW, etc., signals. Absolutely mint condition. $75.00,
plus $7.50 UPS shipping.

8. "Hustler" MO-2 Folding Mobile Antenna Mast. $10.00, $3.00 UPS
Freight.

9. New Kenwood PG-2 DC Power Cable. Fits TM201, TM211, TM401, TM411,

TM2530/2550/2570, TR8400/9500, TR751, TS670, R600/1000/2000. $5.00, plus
$3.00 UPS freight.

10. Sencore Calibrated Field Strength Meter, Model 704B. Covers 54 to
220 MHz. In excellent condition. $80.00, plus $20.00 UPS shipping.

11. Drake 7073DM Hand Held Microphone. $10.00, $4.00 UPS freight.

12. New Radio Shack Dynamic Hand Held Microphone, with 5-pin DIN type
connector. $5.00, and $3.00 UPS freight.

13. Sold.

14. Sold.

15. Sold.

16. "Swan" SWR-1Aa Power and SWR Meter. $15.00, plus $4.00 UPS
freight.

17. "Siltronix" SWR-2, Power and SWR Meter. $15.00, plus $4.00 UPS
freight.

18. Forty-foot Rohn 25 Ham tower, with a HyGain TH-3
"Thunderbird" 10-15-20 Meter Beam antenna. Telex "Tail Twister"
Heavy Duty Rotor, and Control Station. Three element two-meter
beam, and Ringo Ranger two-meter vertical antenna, installed on
tower. Pick up only in Rapid City, SD. Bargain priced at $700.00
firm.

19. HAL Communications PCI-3000 PC Computer Board. Excellent
digital communications, (RTTY, CW, ASCII and AMTOR). Complete
documentation.
Bargain priced at $175.00, plus $7.50 UPS shipping.

20. Sold.

21. Heathkit IT-741D Logic Probe. $15.00, plus $4.00 UPS shipping.

22. Heathkit "Cantenna", 1KW Dummy Load. $20.00, plus $7.50 UPS
shipping.

23. Epson MX80F/T Tractor Feed Dot Matrix Printer, with roll
paper adapter. $50.00, plus $10.00 UPS shipping.

24. New "Pro-AM" Two-Meter Mobile Antenna, (surface mount). $15.00,
plus
$5.00 UPS shipping.

25. Sencore Digital Volt Meter. $10.00, plus $5.00 UPS shipping.

26. "QST" Magazines. January 1974 to March 1997, complete, 288
issues! $50.00, plus $20.00 UPS shipping.

27. "Ham Radio" magazines. Bound editions for years 1976 and
1977. $10.00, plus $7.50 UPS shipping.

28. CY-1300 Oscilloscope. Military surplus and makes a good RTTY,
AMTOR, Clover, monitor. $10.00, $10.00 UPS shipping.

ANNOUNCEMENT - RESULTS OF PRIZE DRAWING

Kachina wishes to congratulate Terry England, N9TL, who won a free 505DSP computer-controlled HF transceiver with 505AT automatic antenna tuner. The drawing was held at 12 noon on Sunday, 18 May at Kachina's Dayton Hamvention booth. The prize radio will be shipped in July.

Terry, get ready to enjoy an entirely new HF radio experience! Thanks to all others who entered our prize drawing.

> Because of lawbreakers like that, we have a ban on 10m amplifiers. Because

I'll agree lawbreakers should be thrown in jail or at least regularly repeatably predictably have their gear confiscated early and often enough that there would be some disincentives.

However.

One does not need MARS/CAP authorizations to use the AT-600's keyboard mod. There are several good and lawful reasons for owning a transceiver with wide-open TX/RX.

One is as a cheap signal generator for test equipment that is always in Coax, never in an antenna. (This is how Cable companies get away with using "our" frequencies, remember?)

The more relevant one to Hams is building transverters to bands one is licensed on. Wide open from 100-200 and 400-500 gives rather more flexibility in picking up-converter LO frequencies than that which is required of matching the narrow range of a type-accepted transceiver.

[NOTE: Follow-up-to: set to r.r.a.equipment; if commenting on this paragraph or below, please redirect to r.r.a.homebrew which I've cross-posted. -- n1vux]

Both of these require a low-power setting or an attenuator. If the manufacturer wants to justify legal use of this keyboard mode, a keyboard setting for 50uW output (exciter only) would be a good one.

If I was optimistic about having time to get into uWave bands anytime soon, I'd be rushing out to buy one of these (and would have grabbed that HP signal generator for 7-11GHz at the last MIT :-)...

I'm wondering if a really wide open transceiver like this would make a multi-band transverter possible, using band-switched resonators like are used on multi-band HF rigs? I'm guess the reason this wasn't done in the past was the switch leads would have too much stray reactance, but with microwave switching diodes perhaps all the band modules could be laid out together? Probably wouldn't fit ... [see r.r.a.h note above!]

Cheap skate eh? We are of the same cloth. Didn't know if you wanted to
get in the packet "area" or if you needed exactly 5.12 but, Mouser has
microprocessor xtals for about $1.25 ea. in the following:

5.068
5.185

Or of course JAN for about $15.

Subject: Astron RS-35M, good idea???

Hello,
I am looking at buying this power supply for my Icom 706. I rea=
lize it is
more than I need for that but I wanted to be able to use it should I ne=
ed
more amps in the future. I have three questions:
1)is this a good power supply?
2)is my thinking sound as far as future expansion goes or should I save=

some money and get a smaller power supply?
3)will I be popping 15amp house breakers with this or does it depend on=

what is running off the power supply? right now I have two computer on =
this
circuit and no way to run a new outlet, I could turn one off when on th=
e
air but one computer I will need.

73's and thanks for your help. Eric KB9QAI No.Spam@add-inc.com

Subject: Astron RS-35M, good idea???

Go for it. I bought a VS50M 7 years ago. It has served well for whate=
ver
comes in and out of the shack.
I currently power my TS870 HF rig. and all my VHF and UHF stuff (since =
I
never xmit simultaneously)
so 1) yes it is a good pwr supply, 2) sound thinking - you can never h=
ave
too much 12VDC capacity,
3) No, it is not a significant 12VAC drain to pop breakers.

Have fun es Gud DX

cheers

From: "Michael Mello" <kq7e@sprynet.com>
Subject: HELP: Rpt noise when windy!!

Sounds like the hardware (if it's rusty, that's you're problem) is acti=
ng
as a non-linear rectifier. When the different transmitters key, the RF=

mixes in the rusty joints, and you now have some rather spectacular, al=
beit
unwanted, RF products floating around. These may not be evident on UHF=
=2E =20

I had a Phelps Dodge Station Master in a fiberglass radome go bad, and
would produce the same results. What died were a few of the antenna
elements inside the radome, which is really a PITA to get into. They w=
ere
intermittent, flexed about, and whenever the TX keyed up, generated
crackles, noises, and non-linear products all over God's creation. Sam=
e
effect. So, that's two things to look at, rusty hardware (replace it, =
bond
around it, etc) or bad antenna (take it down and fix/replace it). =20

Now, if you are using the DB Products, (say a DB214) you'll definitely =
want
to bond the top mast to the bottom mast with a few pieces of good braid=
=2E=20
The two pieces, while fitting into one another, do get corrosion in the=

joint, and give the same wonderful noise problems.

Good luck!

>
>Send Email to jlgo@best.com.
>
>KE6IZS
>Mobile Radio Tech
>
>
I've had my Kenwood V7A for a month now. Mounted it day one in the
car and it has done great. I like the audio, and the features. My
only complaint about the audio is POSSIBLY my problem. I have a
speaker floor mounted, and when I drive 70 with the windows open, I
really have to crank it up to hear. So I'm sure it's my speaker
location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on
dashboard and radio under dash - speaker on floor. So my liking the
audio may be from the use of external speaker, not internal one. But
I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that
you can turn on or off for receive. Kenwood calls it AIP or Advanced
Intercept Point. I've had no problems in hearing far stations, and
can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's
advertise, it is built to ISO 9002 standards. These are very tough
and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it
when you turned it off, it powers up exactly the same way. If you
turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many
operating features in. I use it primarily for Day/Night changes. In
day mode, I have the display bright and the "beep tones" low. In the
night mode - Display is dim and beeps are loud. There are many other
ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only
one feature I would consider missing, that is the MUTE. When
listening to 2m and a 440 station comes on, neither band will mute
automaticly regardless of which is primary. =20

Good luck Joshua!!

>and they might be scared off by, say the Radio Shack employee who asks=
,
>"May I please see your Ham license?"

>What about mail order? Require a photocopy of a Ham license.

You are asking amateur radio dealers to become policmen then? It's
not up to dealers to determine or to enforce any rules on who can and
cannot operate transmitting equipment. And, not all hams carry copies
of their amateur licenses when they go into retail establishments...do
you refuse to sell to them? This is bucket 'o worms material.

Also, not ALL illegal transmissions are caused by unlicensed
operators. I'd venture to say the vast majority of illegal
transmissions are caused by licensed individuals or groups. Either
for some political agenda, personal vendetta or the like. With more
and more folks getting into the hobby we are going have a wider
diversity of personalities -- good and bad. MORE - this means of both
types - hence a greater number of infractions.

I have worked in the amateur retail business. I have sold
transmitting equipment to unlicensed individuals. There was and is no
law telling me to do otherwise. As a matter of fact it was my
understanding I would have been breaking laws by refusing to sell to
anyone.

We (as hams) don't really like this but for now there is not much we
can do about it except to remain self-policing and to do what it takes
- legally - to squelch these unhappy, psychologically challenged
persons. =20

This same topic seems to come up about every six months or so and has
been hash and rehashed. If you want to use analogies, etc. what about
someone with a Technician license? Not a Tech Plus mind you. Should
that person be prohibited from owning a piece HF equipment? They
don't have a license for it.... Should radios be manufactured for
each class of amateur license? So, when you upgrade your ticket you
have to upgrade your equipment also? If someone plans to become a
ham, why can't they have the transmitting equipment already in their
possession? There are a lot of things to think about. This truly can
be a bucket 'o worms.

> Jimmy Kahn, WA2ILK

Yes, I'd love to see the laws change where one MUST show proof that the=
y
have a ham license before they could purchase any ham transmitters. As=
for
mail order, if I place a phone order as KF6JHG, the call sign database
will have my address. If I want them to ship to another address, then =

a fax (or photocopy) of the license would be required.

I'll guess that Radio Shack wouldn't like that law. It might cut a lit=
tle
into their sales. However it would cut down on the sales of equipment =
to
the jammers and jerks.

I'm sure that some Bozo who wants to buy the equipment will find a way =

around the system, but such a law would slow or stop most of them.

73,

Bob KF6JHG

From: ve1rj@ns.sympatico.CA (Bill McFadden)
Subject: Yeasu FT-736R

I am wondering if anyone has any answers to a question I have about=20 the FT-736R.

I have just put in the 6M module and have played around a bit with=20 the scanning option on the rig. I want to be able to scan from say=20 50.100 to 50.200. During my research I have to have the squelch up in=20= =0Aorder for it to scan properly. Playing with the RF gain and the=20 Squelch I was able to get it to scan satisfactorly and it is able to=20= =0Apick up weak stations and stop scanning. I am using the pause button= =20
in so it only pauses for 5 secs then carries on. Stopping almost=20 immediately again because of the signal. This is good because I know=20= =0Asomeone is on there.
However, my biggest problem is the bloody beep it makes when stopping=20= =0Athe scan, when starting over the scan (using pms) or even when=20 hitting buttons.=20

Is there anyway in turning this beep off?

Tx in advance

Bill (VE1RJ)

Is the problem them or you. I have asked many questions of the people
at HRO and never had any problems. The sales people have always been
super and the service has been the same.
I guess that you had a bad day and took it out on them????

From: "Rick Pemble" <pemble@ix.netcom.com>
Subject: UHF antenna plans

Good for you in wanting to make your own antenna! Channel 25 has an au=
dio
carrier freq at 541.25 MHz (video extends 4.5MHz below). The ARRL hand=
book
and the ARRL Antenna handbook have how-to-build articles for antennas i=
n
the 70cm (420-450MHz) band. They include yagis, corner reflectors, etc.=

the build-to examples give frequency/dimension guides that will make it=

very easy for you to build
one for 540 MHz instead (it will be a little smaller than the ham freq=

versions).

If you can't (or don't want to) buy one (handbook) -- the local library=

(community or university) will have a copy.

30 miles isn't tooooo bad for those frequencies (depending on terrain),=
so
anything should improve. Ghosts are typically from
reflections so you might benefit from directivity more than gain.=20

Go ahead an experiment -- remember the age old quote "All antennas work=
-
some just better than others"

Cheers

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig
>
> Yeasu FT2500M
> Icom IC-2000
> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I can tell you that the Yaesu FT2500M is a superb radio. Lots of nice features, plenty of power, very rugged, and the best intermod rejection of any rig I've ever used. Works very well base, mobile or packet. Just one ham's opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

Subject: Need IC-25a repaired/replaced

Our school/scout IC-25a packet station died due to a bad ant. Our group is
out of money for this year and would like to find someone who could fix or
replace the radio for next to nothing. I believe the output driver is good
but the finals unit is shot. If you can help please contact me.

From: 218@sandh.com
Subject: News Rover -- Searches newsgroups for what you want - 218 0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for
messages about items that you collect. Once you tell it what to look for,
News Rover will scan a set of newsgroups and collect all messages that
contain what you are searching for. For example, if you are interested in
messages related to slide rules or calculators, you could specify a search
expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any
messages that match the search expression. This searching is completely
automatic, so it works while you sleep, work, or play. The search
expressions can be as simple as a single word, or they can be complex
expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

Aw, come on! We've used a light duty TV rotor for a HUGE TV antenna
on a tower. It was installed 16 years ago, and still works fine. I
haven't even replaced the wires yet (although I should).

Subject: **********PLEASE HELP ME WITH TEMPO S1 HT**********

Hi,

I recently atteneded a hamfest and bought a Tempo S1 2 meter HT for
$10. The unit came with the battery, leather case, and manual. The ve=
ry
first time I opened it up, I gave the unit 9.5 volts of power from the
power supply, and it worked. But then a wire ripped off, so I soldered=
it
back to where I thought it would go. I charged the NiCad battery, and
closed up the unit. When I went to turn it on, I found that the unit
won't transmit, the TX LED lights up but no RF power is emmited. Then =
I
tuned the radio to a local repeater which was in use at the time, and a=
ll
I heard was the rushing static. Can someone possibly point me in the
right direction? I thought I might have accidentaly grounded the anten=
na
wire, but I went though it all again and still no diffrence. If anyone=

has any ideas at all on this, please e-mail me, since I have very poor
access to the newsgroups (I have AOL.) Also any info on the Tempo S1 H=
T
is also very welcome.

Thanks in advance,
ADavydov1@aol.com

I guess that's the rumor. I bought AT-600 a couple days ago. =20

Almost any tranceivers can be modified. How about Yaesu50R ? same
thing. I think we shouldn't focus on AT-600 too much... I am sure
we do because of HTX-204...

>KE6IZS
>Mobile Radio Tech

I've had my Kenwood V7A for a month now. Mounted it day one in the
car and it has done great. I like the audio, and the features. My
only complaint about the audio is POSSIBLY my problem. I have a
speaker floor mounted, and when I drive 70 with the windows open, I
really have to crank it up to hear. So I'm sure it's my speaker
location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on
dashboard and radio under dash - speaker on floor. So my liking the
audio may be from the use of external speaker, not internal one. But
I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that
you can turn on or off for receive. Kenwood calls it AIP or Advanced
Intercept Point. I've had no problems in hearing far stations, and
can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's
advertise, it is built to ISO 9002 standards. These are very tough
and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it
when you turned it off, it powers up exactly the same way. If you
turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many
operating features in. I use it primarily for Day/Night changes. In
day mode, I have the display bright and the "beep tones" low. In the
night mode - Display is dim and beeps are loud. There are many other
ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only
one feature I would consider missing, that is the MUTE. When
listening to 2m and a 440 station comes on, neither band will mute
automaticly regardless of which is primary. =20

Good luck Joshua!!

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =
and=20
>one-way repeat functions". What is the one-way function? Sounds like=
=20

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

:Also, what features should I look for (and what do they do?) in=20
:a good, basic HT.=20
=20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out
of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

HAVE A 9420 W/CW ADAPTOR AND IT WORKS GREAT. THE ONLY PROBLEM IS THE MISSING NOISE BLANKER. TRY A PORTABLE SWL TYPE RECEIVER IN YOUR CAR TO SEE HOW BAD THE IGNITION NOISE IS, THE RIG IS FINE IN MY MERC BUT MY FORD HAS TOO MUCH NOISE.ALSO USE THE RIG INTO A HAMSTICK ON MY 22FT SAILBOAT AND OVER 50% OF CALLS ARE ANSWERED. I RECOMMEND THE RIG. K2PGB

Kenwook TS 430s in mint condition- hasn't been used in 10 years, but realligned (5/13/97) and tuned by Ham Central (New York) proof of service will be included. Radio has FM and AM boards installed- also CW filter. Also, have matching 430 power supply and speaker and up/down matching Kenwook desk top microphone. In addition, have high power Dentron Super Tuner and MSJ swr/power meter. Will sell as total package price or will sell components separate. For more information, including prices, email to markr@esslink.com
Lou

3992. Lafayette HE-45

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: "." <tboyer@erols.com>
Message-ID: <3382ECA1.6752@erols.com>
Source record: 174931

Hello to the group, and thanks for reading this post.

I was given a Lafayette HE-45 (6-mtr) xcvr. I do not know the condition of it, however , it appears to be in working condition. There is an 8-pin connector for power. I do not have this connector nor do I have a schem. to acertain the proper wiring. I am told that this is a direct to 120vac connection. There are also 6 xtal connectors and one marked VFO. I wonder if anybody knows what that connector actually holds? Is it in fact a crystal? Also, one of the xtal positions has been mod'd for a tunable circuit. I am hoping this is the VFO.

thanks for any help...

todd

email tboyer@erols.com or this group.

thanx again

3993. Swap Shops

Newsgroup: rec.radio.amateur.equipment

3994. ICOM IC 706 MK2 Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: Serge Scorset <efa@infoboard.be>
Message-ID: <3382F01A.6FA0@infoboard.be>
Source record: 174933

Hi,

I would like to have the modification in order to transmit from 1.6 to 54 mhz
continuously on my ICOM IC706MKII transceiver. Someone told me that I have to remove
3 diodes (d116,d118&d119) on the main board. Could someone confirm ? I need to know also the exact location of these components. I need this for my job, I'm working for a
telecommunication department in an engineering school.

Thank you for your time. 73's

Erik

I have already the transformation for the first version... I have the new one MK2 ! Tnx

3995. Re: HAM RADIO OUTLET SUCKS!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: k5dh@qsl.net

Source record: 174934

I'm sorry to hear you had a bad experience with HRO. My experiences with them have been quite different.

I've been dealing with HRO for many years. Here's my experiences:

Whenever I've called them for pricing or information, they have been friendly and helpful. They've told me what I needed to know, without a hint of "talking down to me". I have never identified myself over the telephone by name, call, license class, etc. They had no idea who I was, they only knew that I needed info. They gave it to me. It didn't matter whether I was asking about an expensive HF radio (like the $2,600 Kenwood TS-870S that I ended up buying from them) or small items like a tone board or a speaker/mic.

Whenever I've called to place an order, they've been fast, friendly, and even arranged to ship the order from another store so that the UPS charges would be less (on orders under $100, that is, since they generously offer FREE shipping on ALL orders over $100, while still offering consistently low prices). Again, when I placed the order, they had no idea who I was or what license class I held, until the transaction progressed to that point. They only that knew I wanted to buy the gear, and they sold it to me, fast and friendly. I have had one of their salesmen talk me into buying a CHEAPER item than the one I had in mind (I was buying an air-cooled 50 Ohm dummy load). Either one would have worked fine, but the cheaper one saved me $10. He didn't HAVE to do this... he CARED enough to do it.

I have dealt with four different HRO stores by telephone, and two of those stores in person also (Denver and New Castle). When I was in the two stores in person, the salesmen were friendly and courteous, not only to me, but to ALL of the customers who were there. There were no-code technicians asking "dumb" questions, and receiving good answers. There were old-time Extras (like me) asking "dumb" questions, and also receiving good answers. As far as I'm concerned, they give us all customer service like it's supposed to be.

I'd suggest giving them another try. And when you do, keep in mind that your attitude is as important as theirs. If you go into this with "a chip on your shoulder", you may indeed have another bad time.

BTW, I also have no complaints with AES, but HRO's prices are usually lower. Once in a while, AES is cheaper, but they don't pay the UPS charges, so it is sometimes a "wash". In these cases, I'll buy from HRO.

73,

Dean W. Hemphill, K5DH

4001. WTB- Old broadcast and pro-audio eqpt

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: yrplace@earthlink.net
Message-ID: <yrplace-2105970708380001@news.earthlink.net>
Source record: 174940

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

.Mark Linett

Dean K5DH

4006. Suggestions for general coverage transceiver wanted...

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: ronan <ronan@mail2.quiknet.com>
Message-ID: <33830F86.6AF2@mail2.quiknet.com>
Source record: 174945

Greetings, hamsters.

I am ronan, KB6NHQ, and have only been exposed to 2M/70cM, but now would like to move into other frequencies, namely HF.

I am looking for suggestions for a general coverage transceiver that can be used as a front end for determining the source of interferrence, as well as for conversations, etc.

There are so many models available -- I want one that I can continuously vary the frequency, maybe 'scan mode', then when I locate a source of noise, narrow the bandwidth, use a directional antenna, RDF, etc to locate the source.

So I would appreciate any thoughts from owners of rigs that can attest to the utility of such a rig. I do want to use it for normal ham operations so I want to have the capability to transmit, but it should be an ALL MODE unit.

right now I use a broadcast AM radio, my FT50R and am looking to expand my capability. I cannot afford a spectrum analyzer at this time.

thanks,

Ronan KB6NHQ.

4007. Tower/antenna 4-sale

4008. Schematic AEA Amp

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: Wes Atchison <wes@iphase.com>
Message-ID: <338305AF.3B1E@iphase.com>
Source record: 174947

Trying to repair an AEA LA-30 HF amplifier. It runs a single 30500Z. I would like to get a copy of the manual but the schematic is the most important information. Some etch on the control circuit board was burned up. Replaced that with a wire but have not found the real problem.

Glad to pay for copying and mailing of the infomation. If you could fax the schematic that would be great.

Thanks,

Wes

> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I can
tell you that the Yaesu FT2500M is a superb radio. Lots of nice features,
plenty of power, very rugged, and the best intermod rejection of any rig
I've ever used. Works very well base, mobile or packet. Just one ham's
opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

Subject: HAM RADIO OUTLET SUCKS!

1.... Are you a Ham?

2.... If you are, you should leave this message on their home page.

3.... You're experience is abnormal, in my experience.

4.... Did you act like an asshole?

5.... I prefer HRO to all the other sales outlets combined.

6.... Do you have a chip on your shoulder, because you are a no-code tech?

7.... I have purchased on seperate occasions, everything from an 850 to 2
pl259s and always been treated well.

8.... Have a good day.

From: 218@sandh.com
Subject: News Rover -- Searches newsgroups for what you want - 218 0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for messages about items that you collect. Once you tell it what to look for, News Rover will scan a set of newsgroups and collect all messages that contain what you are searching for. For example, if you are interested in messages related to slide rules or calculators, you could specify a search expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes both UUencoded and MIME base64 images, and it combines and reconstructs binary files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they are available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of newsgroups, selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup junkies! With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. I don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, and it beats Plukit-32 hands down!!

Subject: **********PLEASE HELP ME WITH TEMPO S1 HT**********

Hi,

I recently atteneded a hamfest and bought a Tempo S1 2 meter HT for
$10. The unit came with the battery, leather case, and manual. The ve=
ry
first time I opened it up, I gave the unit 9.5 volts of power from the
power supply, and it worked. But then a wire ripped off, so I soldered=
it
back to where I thought it would go. I charged the NiCad battery, and
closed up the unit. When I went to turn it on, I found that the unit
won't transmit, the TX LED lights up but no RF power is emmited. Then =
I
tuned the radio to a local repeater which was in use at the time, and a=
ll
I heard was the rushing static. Can someone possibly point me in the
right direction? I thought I might have accidentaly grounded the anten=
na
wire, but I went though it all again and still no diffrence. If anyone=

has any ideas at all on this, please e-mail me, since I have very poor
access to the newsgroups (I have AOL.) Also any info on the Tempo S1 H=
T
is also very welcome.

Thanks in advance,

I've had my Kenwood V7A for a month now. Mounted it day one in the car and it has done great. I like the audio, and the features. My only complaint about the audio is POSSIBLY my problem. I have a speaker floor mounted, and when I drive 70 with the windows open, I really have to crank it up to hear. So I'm sure it's my speaker location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.=20

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them. =20

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice. =20

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary. =20

Good luck Joshua!!

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =
and=20

=20
>a single band repeat function, but I don't want to make assumptions.

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set
the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

:a good, basic HT.=20
=20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out
of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

This has shown how little you can take constructive opinions. Have I ever used any of your comments to go against you? When will you ever grow up? Poeple like you is a waste of time even to post comments on an open forum like it here.

By the way, I feel very sorry that my country happens to be the country of your US of A. Asshole! I am so suprised that you cannot go beyond the social boundary as a HAM. Get with the program, please. You can also learn a lot if you can simply accomodate other people's opinion and provide yours as a suggestive idea. This world is not only YOU to teach other people lessons, but to learn from others as you grow up.

I am proud of my heritage and my other callsign. I worked hard for that and are you just jealous of it? The more you want to bash it, the more I'll uphold my ancestors and my pride.

Go get a life, please.

No 73 to you!

The problem is real and exists. When my girlfriend even talks in my car she causes the radio to do things. I have to disable the mike to prevent it from happening.

The question I have is... Do you give up the remote control operation of the radio when Kenwood does the mod? This this thing stinks Kenwood should never have let the radio go to market with this bug. Its an even bigger annoyance to have to send the mike back for the fix (which kenwwod will do for free). Other than that single pain the radio is pretty darn good.

Source record: 174963

I have owned these three HTs: Yaesu FT-470, FT-530, and Icom W2A. I've gotten rid of them for financial reasons, but want to get another one fairly soon. I really liked the looks of the Kenwood TH-79A(D) at the Hamvention.

Anyone have some comments on these (versus others, such as 51R and Icom T7A) ??????????

The only thing you give up is the annoyance. It seems the mike element
is hot during receive and since the radio responds to DTMF commands any
noises in the vehicle that it thinks are DTMF tones it does the
approiate action. ie: tones you hear when dialing a cellular phone, or
your girlfriends voice that hit the right tone, etc.

The modification turns off the mike element during receive, thats all.

End of problem.

I admit it is an oversight on Kenwoods part but they are trying to make
it as painless as possible.

I have a Valley Products Co. SDR 1000 receiver that i would like to convert over to EMWIN signal.

This is a receiver that will signal on the Ku-band.

I have changed the crystal and a changed some filters in the unit. But i still can not get a good data signal.

If anyone has any info on converting these data receivers, please pass it on.

I got the same mod fro a Ham in Italy who just purchased the Radio
from a Dealer. I have not heard a positive confirmation if the Mod
worked. I recommend waiting till more "adventurous" Hams do the Mod
successfully.

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig
>
> Yeasu FT2500M
> Icom IC-2000
> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I =
can
tell you that the Yaesu FT2500M is a superb radio. Lots of nice =
features,
plenty of power, very rugged, and the best intermod rejection of any rig
I've ever used. Works very well base, mobile or packet. Just one ham's
opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

From: 218@sandh.com
Subject: News Rover -- Searches newsgroups for what you want - 218 =
0517040010 FRK

Automate your collecting research!

News Rover is the ideal tool for searching through Usenet newsgroups for
messages about items that you collect. Once you tell it what to look =
for,
News Rover will scan a set of newsgroups and collect all messages that
contain what you are searching for. For example, if you are interested =
in
messages related to slide rules or calculators, you could specify a =
search
expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect any messages that match the search expression. This searching is completely automatic, so it works while you sleep, work, or play. The search expressions can be as simple as a single word, or they can be complex expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables newsgroups. You can use it to search for family names in genealogy newsgroups, or for any other type of information in any newsgroups you choose. And News Rover is ideal for picture newsgroups. It decodes = both
UUencoded and MIME base64 images, and it combines and reconstructs = binary
files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, work, and play.

o Automatically downloads messages and attached files so that they = are
available for instant access when you are ready to review them.

o Decodes attached files of all types (UUencoded and MIME base64).

o Displays a picture gallery of collected thumbnail size images.

o Selects messages based on include and/or exclude criteria to help you find a needle in a haystack and eliminate spam. You can even use complex selection expressions with AND, OR, NEAR and NOT.

o Supports multiple "interest groups," each with sets of = newsgroups,
selection expressions, message database, and picture gallery.

o Remembers files already extracted and eliminates duplicates automatically.

o Saves parts of multi-part files, searches for the missing parts, and rebuilds the entire file when the last part arrives. It even combines parts found on different days and in different newsgroups.

o Allows you to post Usenet messages and send e-mail messages.

o Operates on a schedule you set up to use your phone line only when you don't need it.

o Automatically dials the provider and hangs up the phone when it is finished.

o Works with almost all Internet providers and news servers.

o News Rover is multi-threaded so you can read messages and view
pictures while it downloads and decodes more messages.

News Rover was designed and written by real-life Usnet newsgroup =
junkies!
With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. =
I
don't know how much time I saved. I give your product two thumbs up!!!

T.B. says: "Great Job!!! I tried your software for the first time today, =
and
it beats Plukit-32 hands down!!

Aw, come on! We've used a light duty TV rotor for a HUGE TV antenna
on a tower. It was installed 16 years ago, and still works fine. I
haven't even replaced the wires yet (although I should).

Subject: Astatis D-104 Impedence

I recently acquired the mike but it doesn't work well with my rig due
to its (supposedly) high impedence. I need to know the impedence of
the mike so I can get a transformer to match it to my 600ohm mike
input on my rig (Tempo One SSB).

I've had my Kenwood V7A for a month now. Mounted it day one in the car and it has done great. I like the audio, and the features. My only complaint about the audio is POSSIBLY my problem. I have a speaker floor mounted, and when I drive 70 with the windows open, I really have to crank it up to hear. So I'm sure it's my speaker location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head on dashboard and radio under dash - speaker on floor. So my liking the audio may be from the use of external speaker, not internal one. But I use external speaker on every rig I have except HT's.=3D20

You mentioned the receiver - the V7A has, in effect, a pre amp that you can turn on or off for receive. Kenwood calls it AIP or Advanced Intercept Point. I've had no problems in hearing far stations, and can usually get back to them. =3D20

While the V7A is not built to "Mil Spec" standards as some Yaesu's advertise, it is built to ISO 9002 standards. These are very tough and a much sought after certification in the private/commercial world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left it when you turned it off, it powers up exactly the same way. If you turned it off scanning, it comes back on scanning. That is nice. =3D20

2. There are 4 selectable "Program Modes" that you can store many operating features in. I use it primarily for Day/Night changes. In day mode, I have the display bright and the "beep tones" low. In the night mode - Display is dim and beeps are loud. There are many other ways you can use these settings, even changing the step rate per band.

I don't think you will be disappointed with the V7A. There is only one feature I would consider missing, that is the MUTE. When listening to 2m and a 440 station comes on, neither band will mute automaticly regardless of which is primary. =3D20

Good luck Joshua!!

>Yaesu FT-51R

I own the FT-51 and like it very much for its use of alphanumerics in
the display. SPecifically, it allows an 8 character label to be
applied to each memory channel and the label is displayed along with,
not instead of, the frequency. It performs well, as I suppose all of
the radios you listed do.

>BTW, in the HRO catalog, for the Yaesu, it states "Built-in crossband =
=3D

The one way cross-band repeat is not an "in-band" repeat, but rather a
feature that allows the radio to retransmit a signal received on one
band to the other, but not the other way. I other words, you can set

the radio to retransmit signals received on a 440 frequency on two
meters, but not retansmit signals received on 2 meters on 440.
Vice-versa, as well of course.

regards, Don

:Also, what features should I look for (and what do they do?) in=3D20
:a good, basic HT.=3D20
=3D20
You should avoid any HTs which can transmit outside of the 144 to
148 Mhz amateur band. It is legal for you to use such a radio
since amateurs are expected to have enough knowledge to avoid out

of band txing. However, there is no point in being able to tx out
of band and having a HT that can not do so will avoid the temptation
and possible accidental out of band txing.

Subject: FT-2500M vs TM-261A vs IC-2000?

> I'm looking to buy my first "real" 2M mobile rig

>

> Yeasu FT2500M

> Icom IC-2000

> Kenwood TM-261A

I have no experience with the Icom or Kenwood rigs on this list, but I =
can

tell you that the Yaesu FT2500M is a superb radio. Lots of nice =
features,

plenty of power, very rugged, and the best intermod rejection of any =
rig

I've ever used. Works very well base, mobile or packet. Just one =
ham's

opinion. Best of luck...

Disclaimer: I have no connection with Yaesu, Icom, or Kenwood.

From: 218@sandh.com

Subject: News Rover -- Searches newsgroups for what you want - 218 =
0517040010=20
FRK

Automate your =
collecting=20
research!

News Rover is the ideal tool for searching through Usenet newsgroups =
for

messages about items that you collect. Once you tell it what to =
look=20
for,

News Rover will scan a set of newsgroups and collect all messages =
that

contain what you are searching for. For example, if you are =
interested=20
in

messages related to slide rules or calculators, you could specify a =
search

expression such as:

slide rule or calculator

News Rover will then scan a set of newsgroups you select and collect =
any

messages that match the search expression. This searching is =
completely

automatic, so it works while you sleep, work, or play. The =
search

expressions can be as simple as a single word, or they can be =
complex

expressions with AND, OR, NEAR, and NOT operators.

You can download a free demonstration copy of News Rover from:

http://www.NewsRover.com

But News Rover is good for more than just searching collectables

newsgroups. You can use it to search for family names in genealogy

newsgroups, or for any other type of information in any newsgroups =
you

choose. And News Rover is ideal for picture newsgroups. It =
decodes=20
both

UUencoded and MIME base64 images, and it combines and reconstructs =
binary

files that are split into multiple messages.

Here are some of the key features of News Rover:

o Scans newsgroups you specify while you sleep, =
work,=20
and play.

o Automatically downloads messages and attached =
files=20
so that they are

available for instant access when =
you are=20
ready to review them.

o Decodes attached files of all types =
(UUencoded and=20
MIME base64).

o Displays a picture gallery of collected =
thumbnail=20
size images.

o Selects messages based on include and/or =
exclude=20
criteria to help

you find a needle in a haystack and =

eliminate spam. You can even

use complex selection expressions =
with AND,=20
OR, NEAR and NOT.

o Supports multiple "interest =
groups," each=20
with sets of newsgroups,

selection expressions, message =
database,=20
and picture gallery.

o Remembers files already extracted and =
eliminates=20
duplicates

automatically.

o Saves parts of multi-part files, searches for =
the=20
missing

parts, and rebuilds the entire file =
when=20
the last part arrives.

It even combines parts found on =
different=20
days and in different

newsgroups.

o Allows you to post Usenet messages and send =
e-mail=20
messages.

o Operates on a schedule you set up to use your =
phone=20
line only

when you don't need it.

o Automatically dials the provider and hangs up =
the=20

phone when it

is finished.

o Works with almost all Internet providers and =
news=20
servers.

o News Rover is multi-threaded so you can read =
messages=20
and view

pictures while it downloads and =
decodes=20
more messages.

News Rover was designed and written by real-life Usnet newsgroup =
junkies!

With News Rover the news is ready when you are!

To learn more and download your free demonstration copy, visit:

&=
nbsp; =20
http://www.NewsRover.com

News Rover is getting rave reviews...

D.G. says: I downloaded News Rover last night... I ordered this morning. =
I

don't know how much time I saved. I give your product two thumbs =
up!!!

T.B. says: "Great Job!!! I tried your software for the first time =
today,=20
and

it beats Plukit-32 hands down!!

>

>KE6IZS

>Mobile Radio Tech

I've had my Kenwood V7A for a month now. Mounted it day one in =
the

car and it has done great. I like the audio, and the features. =
My

only complaint about the audio is POSSIBLY my problem. I have =
a

speaker floor mounted, and when I drive 70 with the windows open, I

really have to crank it up to hear. So I'm sure it's my =
speaker

location and the wind noise.

Also - I did a remote mount the day I bought the rig. Control head =
on

dashboard and radio under dash - speaker on floor. So my liking =
the

audio may be from the use of external speaker, not internal one. =
But

I use external speaker on every rig I have except HT's.=3D20

You mentioned the receiver - the V7A has, in effect, a pre amp that

you can turn on or off for receive. Kenwood calls it AIP or =
Advanced

Intercept Point. I've had no problems in hearing far stations, =
and

can usually get back to them. =3D20

While the V7A is not built to "Mil Spec" standards as some =
Yaesu's

advertise, it is built to ISO 9002 standards. These are very =
tough

and a much sought after certification in the private/commercial =
world.

Two of the nicest features I like on the V7A:

1. There is a way to program the V7A so that no matter how you left =
it

when you turned it off, it powers up exactly the same way. If =
you

turned it off scanning, it comes back on scanning. That is nice. =
=3D20

2. There are 4 selectable "Program Modes" that you can =
store=20
many

operating features in. I use it primarily for Day/Night =
changes. =20
In

day mode, I have the display bright and the "beep tones" =
low. In=20
the

night mode - Display is dim and beeps are loud. There are many =
other

ways you can use these settings, even changing the step rate per =
band.

I don't think you will be disappointed with the V7A. There is =
only

one feature I would consider missing, that is the MUTE. When

listening to 2m and a 440 station comes on, neither band will mute

automaticly regardless of which is primary. =3D20

Good luck Joshua!!

Sounds like=3D

=3D20

>a single band repeat function, but I don't want to make =
assumptions.

The one way cross-band repeat is not an "in-band" repeat, but =
rather=20
a

feature that allows the radio to retransmit a signal received on one

band to the other, but not the other way. I other words, you can set

the radio to retransmit signals received on a 440 frequency on two

meters, but not retansmit signals received on 2 meters on 440.

Vice-versa, as well of course.

:a good, basic HT.=3D20

=3D20

You should avoid any HTs which can transmit outside of the 144 to

148 Mhz amateur band. It is legal for you to use such a radio

since amateurs are expected to have enough knowledge to avoid out

of band txing. However, there is no point in being able to tx out

of band and having a HT that can not do so will avoid the temptation

and possible accidental out of band txing.

Todd,
AES told me the same thing last month when I called to get my 741
repaired. I took it up there telling them I wasn't overly concerned to
get it back ASAP. It was done in seven days!

>Bill

Here's my 2 cents worth. I was never in a HRO store, but I have dealt with the Delaware store many times via telephone. Everytime I called, I was treated well, my questions were answered, and the people on the phone offered personal opinions based on their own experience with the rigs. I have called for prices and was treated well (the same can be said for AES). Despite the fact that they probably take many, many phone calls during the day (probably while they are waiting on a walk-in customer), I can honestly say they always acted professionally. No complaints here.

One more thing. I've been a ham for 29 years and got my Extra back in 1974 when you got to face the FCC examiner. Despite this, everything in this world changes including our license classes and testing procedures. This no-code "beef" is wearing thin with me. The worst operators are easily found on select frequencies on 75 and 20 meters (you know what I mean). And sad to say, these are the guys who represent my "generation".

4041. Need IC-25a repaired/replaced

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-21 00:00:00 UTC
From: John Scott Mackey <jmackey@com.mcn.net>
Message-ID: <01bc65a6$624692a0$122da3cd@Pjmackey>
Source record: 175009

Our school/scout IC-25a packet station died due to a bad ant. Our group is out of money for this year and would like to find someone who could fix or replace the radio for next to nothing. I believe the output driver is good but the finals unit is shot. If you can help please contact me.

Well there's always the option of upgrading to extra class unless you
feel hopelessly locked into whatever class of license you do hold! A
common malady with no-coders. If you already hold an advanced class
license, elements 1C and 4B shouldn't be such a big deal. As they say in
the Nike ads, "just do it."

There's a range of Japanese cables sold in the UK with the name Kansai Tsushin Densen which includes a 5D-FB and it's good radio grade coax with a solid copper center and foam PVC dielectric. I've used 3 different sizes, 5D is the smallest, 8D the middle and 10D the largest. (These could even be the sizes of the cables in mm inside the jackets, but here I'm guessing and not sure.) The 5D-FB is about 5/16" diameter outside the jacket, so see if yours is the same. It's a bit thicker than RG-58 and far stiffer. I'm guessing that it's about the same size as RG8X but I don't have any here to compare.

According to some notes I put into my 1993 diary, here are the loss figures, along with Andrew 1/2" and 7/8" Heliax and some other cables often found in amateur station transmission lines. As you can see the 10D 1/2" cable is extremely nice stuff and far cheaper than the 1/2" Andrew line, but even the 5D that may be the same as you have is better than RG213. Others may have better data than these old jottings of mine.

dB/100m 100MHz 400MHz 1000MHz
5D-FB 5.5 12.1 18.7
8D-FB 3.9 8.5 13.0
10D-FB 3.1 6.8 10.5
LDF 4-50 2.24 4.66 7.68
LDF 5-50 1.2 2.56 4.30
RG58 39.5
RG213 17.6
RG142 12.6 27.6 44.6

From: bstevens@chipshot.Sun.COM
Message-ID: <5m1vsl$lub@centralnews1.Central.Sun.COM>
Source record: 174728

As the title suggests, I'm considering buying an FT-8000 or FT-8100. I might consider an FT-8500, but I suspect I can't spend that much :(

I'd prefer one in excellent or mint condition, although it will be mobile immediately (to replace an ht that isn't good mobile), so one that's been mobile _might_ be OK. I do want all the original manuals and parts (boxes aren't absolutely necessary).

If you have one you'd like to part with, please resopnd to:

brian@stevens.com (home)
brian.stevens@central.sun.com (work)

4063. ALINCO DJ580 MOD FOR FULL 432 BAND?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: David <76167.631@CompuServe.COM>
Message-ID: <5m2g0l$nk0$1@mhadf.production.compuserve.com>
Source record: 174731

Does anyone know how to modify the Alinco DJ580 (American type
with PL support) so that it can transmit on the full
432MHz American amateur band? The stock radio
does not transmit below 440 MHz.

The official and "unofficial" manuals do not include
a mod for this.

Please don't tell me about a mod that you have not
personally tried on your own radio.

Source record: 174732
Cross-posted to:
rec.radio.amateur.misc,rec.radio.amateur.equipment,rec.radio.amateur.digital.misc,comp.sys.palmtops,alt.comp.sys.palmtops.hp

just scrounged up a 7AH gell cell and wondering some ways
to charge it as I only have a 500ma adapter for charging. I
asume I need to just plug it in and periodically check the
voltage to prevent over charging?

Now for emergencies (was hoping to use it with ARES)...
If you can hook two car batterries together +_+ and -_-
can you do the same with gell cells? Read somewhere that
30 minutes with jumper cables would work!

What about pluging it into the cigarette lighter socket?
positive to positive again. The draw would only be 7A
right? So most car lighter sockets are good for 15A
and should not over heat? How long would this
take again?

4065. Re: MFJ 9420 rig--opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: Phillip <maccabeus@gatecom.com>
Message-ID: <01bc66b6$cf04a380$LocalHost@520d>
Source record: 174733

I have worked 21 states with my 9420. But I recently
added a mobile solution to correct the lack of noise
filtering. I had a grea time testing it out with a QSO
between Michigan and Texas while driving my Merc
Cougar. 9420 and a hustler whip. Heres how...

First RUN dont walk to you local radio shack and
ask the for cat. no. 21-543 DSP-40. they are out of
production but you may be able to get them to locate
one. I live in near detroit and they found one in Grand
Rapids (other side of the state).. Try hard because you'll
not find a DSP unit anywhere else NEW for $25. This will
be a very handy item for use on other equipt as well. It
will get rid of alot of interference and give a narrower filter
to eliminate interference from the atmosphere, other
stations operating nearby, and electrical noise nearby.
Contrary to those who prefer the $150 DSP units I find 3
CW filters and the SSB filter fine for my needs. The DSP
Does not do digital modes but DOES too work on SSB. I
own an MFJ-9420 which has no noise limiting capabilities
and find the DSP-40 perfect. Between it and the noise
filter below(for ignition noise on the power line) I can now
run mobile 20M. The 3 filters can actually be used on CW
(to cut out adjacent operators) and also I have tried it on
SSB to eliminate some of the QRN. I find the medium to
be a good compromise for SSB. For what I paid Ild not buy
a $100 unit. I was fortunate to try our club-presidents
unit first and was quite satisfied. I was worried when I found
they were out of production.

next get cat. no.270-055 20A heavyDuty noise filter
and a 3outlet accessorysocket. [000] <-looks like that
solder the filter and tape to the bottom. put a 15A cigarette
lighter plug on it. This will give you 15A filter supply.
you now can use it for 2M equiptment or go 20M mobile.
this eliminates the ignition noise that prevented me from
going mobile. the noise went right to the speaker and
prevented me from listening to any reply.

mind you I contacted 21 states without either of these additions
I just could not operate mobile. I mostly use 2M for mobile
anyway. put a pronto on locating the DSP though. newer DSPs
have more beeps and whistles than most need and cost $150.
I got to try out my RS DSP from a club member and was impressed.

Others I have talked to cant figure why RS stopped producing them.
Now there may be 100 units available statewide. It will be the
best $25 of your investment.

for antenna I use a Hustler Whip and a 3Mag heavyduty mount.
I would recommend a lower wind-resistant modle for high Xway speeds.

73 and talk later.
enjoy the hamfests

Given that human nature is such that those who have negative feelings are
at least twice as likely to respond, that isn't all that many. I've been
dealing with HRO for over 25 years and have never been disappointed. I've
only been following this thread off and on, but it looks like many of the
complaints represent unrealistic expectations.

Dave:

The Kenwood TH-79 is a nice rig but requires opening the radio to do the extended Rx mod on UHF. The Yaesu 51R is way overpriced for what you get. The Icom T7A is also nice, and a recent price cut at some dealers brings the cost down in the $280 range. The T7A, like the Yaesu 50R, does not receive simultaneously on both bands. My favorite, because I own one, is the Icom W32A.

4072. IC-Delta 100 Triband Mobile. Opinions?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: Julian Frost <jfrost@odaiko.ss.uci.edu>
Message-ID: <Pine.LNX.3.95.970522093955.3939H-100000@odaiko.ss.uci.edu>
Source record: 174775

Hi,

I'm looking for opinions on the IC-Delta 100 triband mobile radio from
those who currently own one, or used to own one.

I understand that the control head is in constant digital communication
with the radio body, and that under some situations, that communication
can be interrupted (eg. by spikes from refrigerators in a mobil home,
etc). If that happens, the radio locks up and has to be switched off for a
while before switching it back on (Icom has a service bulletin about this,
apparently, but no fix).

Any other oddities with this radio?

Thanks,

Julian

4073. Problems with IC-31E. Need help!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: frode@sp067.cern.ch
Message-ID: <frode.864319263@news.cern.ch>
Source record: 174776

I am posting this for a friend who has problems posting to USENET groups.
Please post your answers with help etc. here or mail him directly at:
jd@nera.no. Many thanks.

73's Frode, F/LA2RL

I was trying to run the IC-31E on external power using the cable intended
from Icom, observing correct polarity (black =neg.supply).
The powersupply was set to abt 6 volts. The battery was fitted, and it was
close to empty.
The lock key was put in Lock position. As I was afraid of overcharging the
battery , I sat the pwr-supply
for current limiting. I discowered a pulsating current from the pwr.supply,
Probably the low-power function
you have on theese radios started its normal operation.
Then I touched a butten when reaching for the IC-31E. I discowered the
display was blank.!!
Removing the ext. pwr cable and replacing the battery with a charged one
did not help, I could not get the radio on!
Tried resetting without ereasing the channels programmed. Same problem.
At last , by plugging and unplugging the ext. pwr cable the RX functioned,
but the RX draws too much current!!!
With power off it draws abt. 200mA (the batt. removed).
When I measure the voltage by using the radios keys and display, it shows
only 0,8 volts!
Help needed!

4074. Looking for info on repeater controllers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: "Chad Johnston, KC8ADE" <webmaster@nuwaysupply.com>
Message-ID: <01bc66d4$04829d60$4e4e99ce@chadj>
Source record: 174777
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Hi!

My club is located in northern Michigan, and I'm interested in replacing the controller we're currently using with something a little more current. We've got fewer than 50 members, so there's not a lot of $$$ to play with. Here's the type of features I'm interested in:

ALL FEATURES OF A "NORMAL" VHF/UHF CONTROLLER, plus:
Multiple courtesy tones
Autopatch
Programmable speed dials
Voice ID
Voice messaging for announcements, time, etc.

I'm not looking for voicemail features; that's a bit too much of an added expense.

Currently we're running a HPC-201 from a little place called Maggiore Electronics, but the guy who can support these controllers has since passed on, so they aren't much help. This unit cost the club about $250.00 quite a few years ago, and I can't seem to find one with similar features for much cheaper!

I know that controllers aren't cheap, but I'm almost positive that there's at least ONE out there for less than $900.00!! I'm not even ruling out a mailorder kit of some kind, as long as the functionality is there.

ANY INFORMATION WOULD BE GREATLY APPRECIATED!!!

Thanks in advance. Please email me with your response, in addition to any posts to the newsgroups.

73,

Chad Johnston, KC8ADE

Stock, out of the box, from the factory, the default RX/TX range
for the HTX-404 is 440-450-MHz. The manual gives a key sequence
to unlock 430-440 but that's it; nothing outside of the amateur band.

Oh so important point, nowadays. Considering what I've seen of other
customers in most stores I visit many do have an attitude problem.
I don't have that problem, though. :-)

Dean, for the most part I'll agree with you about HRO. On the phone,
almost invariably they've been quite friendly although, depending
on the store and time of day, sometimes terse. I've talked to the
Las Vegas store as well - very friendly!

BUT -- when I was living in northern Virginia the Woodbridge HRO was
but a 45-minute road trip. Despite that, myself and some friends
found ourselves preferring to take a Saturday to drive across the
Chesapeake Bay, up the Eastern Shore, to New Castle, DE. The folks
there, in person and on the phone, have been so much more friendly.
Delaware also has no sales tax but the gasoline spent offset that.
Still, the road trips were worth it.

On more than one occasion (three to be exact) I've gone into the
Woodbridge HRO and scanned the shelves to see what was new and, busy
or not, was totally ignored. I went up to the counter and very
patiently waited until one of the sales critters finished a conversation
and had a chance to wait on me. Again, I was ignored (with US$100's to
"burn") even after one of them walked right by me, looking me straight

in the eyes as he passed me. The friendliest I've been treated at the Woodbridge store was during a "Yeasu Day". This was way back when the FT-530 was just arriving in the local stores. I had a nice little chat about the 530 with one of the sales people. Later I realized that this gentleman was from Yaesu and not one of the usual sales critters.

Oh, at a number of hamfests in the Balto-DC area I mentioned to the organizers about getting HRO to show up to increase the vendor count. Many doubted that they could get the Delaware crew to come down into Woodbridge's "territory".

My experiences, as well as similar experiences from close friends have me keeping HRO the last-to-call on my list. That is beginning to change now...

From: don.phelps@infoway.com
Message-ID: <864324212@infoway.com>
Source record: 174788

The Ignorant Expert (IE) is to be found amoung the amateur radio operators
and newsgroup posters. This bane on an otherwise enjoyable hobby
expounds as an expert on what the other person is doing wrong;
but is totally ignorant, and proves by example, how obnoxious it
is to judge another.

I have modified a Gonset 6 meter linear to work out of band at 60 MHz,
removing the key shaping circuits for a much more rapid rise and fall
times, that would generate obnoxious key clicks.
The fact that I was building (cheaply) a fourier transform
nuclear magnetic resonance spectrometer, the third to be built in
the world and publishing the results in a scientific journal,
and yes, keeping the radiation within the shielded sample chamber,
made this legal.

But if I discussed it on the air, or here, there would be those
IEs to tell me all about the sins of operating out of band.
Seems IEs are everywhere. In their ignorance, they can not
perceive they are not experts on what everyone else is doing.

For Sale:

I have a Icom IC-271H 2-Meter all-mode for sale. This rig is as new, "No Scratches" non-smoker. The IC-271H is a base rig that runs on 12V so will go mobile. It matches the IC-751 & IC-751A HF rigs, Same in looks, 4 3/8" high, 11 1/4" wide & 10 3/4" deep.

Has 100 Watts out All-Mode. Memorys, tone-board, scan ect. I have shipping box, 12V cord, hand mic and book.

$650.00

Thanks,
Boyd N6DMF

I have made two purchases "incognito" from the Salem New Hampshire HRO
I am pleased to say that on both purchase times I was treated well by
the Newer Employees and also the Mgr and Asst Manager. I suppose all my
negative posts about them has changed their attitude. I saw the Manager
deal politly with an irate customer and solve the problem so that the
customer was satisfied. I didn't see any of the "old time salespeople"
who had a "chip on their shoulders". Perhaps they moved on to a
different employer. I will continue to make purchases from this store
and may actually pay by credit card but then they would know my identity
Previously I sent a nasty E-Mail to the Manager and felt my life would
be in danger if I identified myself in the store.

How about giving me your sources for your claim that the "vast majority"
of their customers are happy with the service at HRO Clint? In the
replies I've received, most in email, it's about 60:40 in the negative.
I'll give that a may get more negative votes because I was in the
negative as well but it's sure no "vast majority" of happy customers.

4101. Alinco DJ-G5TY Expanded Rcv?

Pat Wilson wrote:
>
> 1.... Are you a Ham?
It doesn't matter if I am a ham or not. I am a customer, I deserve good service. They don't check if I am a ham or not.

> 2.... If you are, you should leave this message on their home page.
I've sent mail to on the HRO website, zero reply. Probably had troulbe sounding out the big words.

> 3.... You're experience is abnormal, in my experience.
I'm glad for you.

> 4.... Did you act like an asshole?
Yes, of course I did. What the hell kind of question is that? I had questions about differences between two radios last time I was there. When then guy didn't know the answer he literally shrugged his shoulders and said "I don't know.." I'm asking why one radio costs $50 more than another and he can't tell me, that's a big deal to me. I get better service at Nordstrom's buying a $300 dollar pair of shoes.

> 5.... I prefer HRO to all the other sales outlets combined.
The term outlet is another pet peeve.

> 6.... Do you have a chip on your shoulder, because you are a no-code tech?
I'm not the one with a chip. It's the poor guys who feel they were screwed by the FCC for letting people in without learning code.

4122. C508A antenna on my FT-50R?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-22 00:00:00 UTC
From: jeffj@scott.net
Message-ID: <3383b217.31195567@news.scott.net>
Source record: 174848

I believe that in the past someone mentioned that the Standard C508A antenna will work with the Yaesu FT-50R. I'm curious if anybody is currently using this set-up? If so, is the performance better that with the stock Yaesu "duck"? Does it have the little rubber skirt that covers the SMA connector on the FT-50R? Any comments would be greatly appreciated as I hate the stock "duck" and am not real happy with the SMA-3 (it's too long) and the Diamond SRH519 doesn't seem much better than the stock antenna.

I've got the radio and I had the problem. Simply change the
default mic setting within the menu as it relates to programming
and you'll be all set. Not a mod - just a setting. My cellular
phone tones interacted with it - thought I was going nuts! :-)

I went into HRO in Salem, NH yesterday and tuned one for about 30 minutes and just sort of went around the front panel. Seems to be a very nice radio. It has a variable knob on the left side near the S meter marked "NL" and turning it seemed to be the AMOUNT of DSP applied - and once I discovered this knob, I was fascinated with the NOISE LEVEL (my guess as to what NL stands for) and how I could back out perhaps 90% of all of the background static and noise floor sounding noise. It was very impressive. By the same token, I was on 20 meters. When I tune around on 10 meters and even more so on 6, I don't hear the same kind of noise - which is one of the cool things about a lot of the atmospheric stuff not bugging us so much as we move higher and higher in frequency.

Don't you wish we could RENT these radios and try them out for a month at a time and then SELECT the one we liked best? Tough to play the radio ahead of the purchases!

With a little more information I could probably help.

What band?

What mike?

Probably RF feedback if on 40/80M. Ferrite cores (split variety) around
the power cord where it goes into the radio will help or stop it.

If it is all bands then,

Carrier oscillator setting,
Carrier balance,
Spurious adjustment,
Final bias.

Those are starting points.

I am looking for a KDK DM-T11 mic. It works with the KDK FM 2025 and
other
similar KDK fm's.

Tnx for any information anyone has about where to find one of these mics.

depending on the 2SAT some you had to remove a diode and reinstall the
out of band diode. seems you may have one of these units.

Heathkit DX-40 transmitter for sale $50.00 (US) plus shipping. All original, no mods, has all knobs, meter, etc. Front panel an 8.5 - 9.0, cabinet has been repainted not great but then not bad. Missing xtal cover panel on rear. Works fine.

Will also consider trade for D-104 mic with a 2-prong Amphenol connector.

Thanks for reading.

>
> 73's
> Chuck
> WD0ASJ
hello Chuck and everyone else-a friend of mine built the 2 to 6
transverter and has had good luck with it-they are good perfomers
and
well engineered, and take about 8 hours to build, + or - depending
on
your skill level. I built the 20 to 6 transverter and have found it
to
be an excellent performer also, and will handle accidental 100 watt
inputs
(oops!!) with nothing more than cooked resistors in the attenuator
pad.
By the way, I chose the 20 to 6 unit so I could work 52.525 FM with
my
"opened" FT900 (16.525mhz) as well as the usual lower band SSB,
although TenTech doesn't recomend using the unit above 52 Mhz.

>I think I am interested in SSB + CW only... (ie, FM not necessary).

The Radio Shack HTX-100 is a good performer, and cheap on the used gear market (typically $100 to $125). It works SSB and CW, puts out 25 Watts PEP, and performs generally well.

The Uniden HR-2510 and HR-2600 are also good performers which have AM and FM in addition to SSB and CW, but they usually sell for $175 to $225 on the used gear market, and they do not perform any better than the HTX-100 (the circuitry is remarkably similar, in fact).

There are other 10m rigs on the market, all priced much higher.

73,
Dean K5DH

4168. TRADE -- FT-243 and similar xtals, 80/40/30/20m freqs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-23 00:00:00 UTC

I have the following crystals FOR TRADE ONLY:

FT-243 holders: (these are FUNDAMENTAL crystals, not overtone!)

7156, 10105, 10130, 10140, 14060, 14125

Note that the 14060 is NOT a 7030 crystal doubled!!!!!

Fit FT-243 sockets, but larger holders similar to CR-1A:

1810, 1812, 1815, 1817, 1820, 1845, 1860, 1870, 1990

3/4" pin spacing, larger pins than FT-243 (like CR-1A pins):

3560, 7038.88

I will TRADE these crystals, one-for-one, for FT-243 and similar
crystals on 80m and 40m CW frequencies (3500-3725 and 7000-7150).
I will NOT sell them! They came from an estate, and I promised
the executor that I would not re-sell them, only trade them, and
I intend to keep that promise.

73,
Dean K5DH

Perhaps someone has run across this problem. I cannot seem to locate my manual. Somehow, I hit a certain combination of buttons and now I cannot access about 25 memories. Most of these memories are skipped, but some are not (CHS ON). The display shows the letters 'AO' in the upper right. Any ideas?

Of course, I will find the manual right after I see an answer.

Matt, there really isn't much of a calibration for this monitor. Since the gain is usually adjusted for the application, the calibration basically consists of making sure that the amplifiers are capable of a certain gain factor (seems like it was something like 1 volt full screen deflection, hard to remember as I haven't done one for years), and low frequency square wave response of the amps. It's not a particularly sophisticated instrument, although typical Tek high quality, it was intended as a low frequency x-y monitor primarily for OEM use; hence the easily accessible gain adjustments. If the one you have is not working properly, it's not likely that calibration will correct the problem.

May 23, 1997

The KB8UYZ Amateur Radio Page now has a Rig Review Page, which can be accessed at http://kb8uyz.com/newrig.htm. The current featured radio is the Icom 706-MKII, which we saw while in Dayton ... quite the radio!

Browse through the features, and then surf on over to KB8UYZ Amateur Radio, located at http://kb8uyz.com.

New rigs will be featured often, so visit again!

Hello,

I am looking for a mod for the ICom 281H that will allow you to transmit
out of band. I then can use it for ham radio and for emergency services,
since I am a Police Officer. Any help would be appreciaited.

Kenwood is aware of the problem. Your choice is to either send in the mike or ask the kit be sent to you for self repair. Perhaps by now the fix is already been done to the newer V7A's.
The mike problem only exit's here when the mike control is on. When it is shut off there is no problem. To test to see if yours is one of the one's that will go nut's just scan the 440 band where paging service's are and watch what happens when you hit on a service that send a series of DTMF tones. Mine when nuts playing a George Benson CD!
So far Kenwood has NOT sent me the kit and I raised holy hell with them at the Dayton Hamvention. I have been waiting for this kit for about 2 months now.
I sold a Kenwood 733 to get this rig and wish I had the 733 back now.

On 2 meters, a 100' run should have about 1.5 dB loss, which would be
closer to 10 watts of loss instead of the 20 watts you are seeing.
Likewise on 70 cm the loss should be about 2.5 dB, or about 15 watts.

Do you have a good match so the meter is really seeing 50 ohms resistive
in both cases? What kind of antenna and could the power meter be
detuning the antenna if it is close proximity to the antenna when
making your second measurement?

By the way, the losses you are seeing are closer to one would expect
for RG-8 foam. If the connectors aren't properly installed they
could contribute additional loss in the form of reflected power.

73,
Todd

If you are experiencing high loss, you might want to check the SWR.
The higher the SWR, the higher the transmission line loss. ALso, the
ARRL Handbook has a chart of loss figures you might reference. Most of
the magazines show this as well. If you have a good match, losing 50
watts is what you would expect from R^8X, not 9913.

I just purchased some 9913 type cable. I put my power meter on the radio side and connect to an antenna. The power meter says its putting out 50 watts on 2 meter and 35 watts on 440.

Then I moved the power meter (inline) to the antenna side of the coax. So the antenna is between the end of the coax and the antenna.

On that side of the connection the power meter only shows 30 watts on 2 meter and 10 watts on 440.

I am aware there is line loss but is this typical for a 100 foot run of 9913 flex coax?

Thanks for your help!

> 73 de Morel, 4X1AD

I saw it at Dayton and was favorably impressed with the approach taken. However, given the environment in which it was being displayed, it was impossible to determine whether the receiver was any good or not. I'd say this is true for any equipment being shown there. They did seem to have a better antenna hooked up to it than was hooked up to Winradio or the Ten-Tec computer shortwave receiver, but still I wouldn't want to make a judgement based on it.

It is an interesting question as to whether this is the direction HF will take. They have a very nice spectrum scope on it and there are a number of things you can do under computer control that you can't do with a stand alone radio. However, I do miss twiddling the knobs. It will be interesting to see how this blossoms in the coming years.

OK, so what do you do when the widow/widower of an SK wants to sell
off the equipment? Or, when somebody cleans out the basement, and
decides to get rid of all of that "radio stuff" that Grandpa left there?

You're trying to put all of the responsibility on the seller. How about
letting people make their own decisions, and prosecuting those people
who *use* the equipment illegally? In case you haven't noticed, we're
not (supposedly) operating under the Napoleonic legal system here in the
U.S.

Of course, I never would have gotten into amateur radio unless I had
access to the old Swan rig that I bought from a local ham. Amazingly
enough, I was even responsible enough not to transmit with it until
I had an appropriate license. Why assume the worst about people, until
they prove that they deserve the reputation?

>ideas?

AO is the auto power off feature. To turn it off turn the rig off. Push SET while turning the rig ON. Push SET several times to get to the AO menu. Rotate tuning dial to turn off. Then hit the DUPE keyy to exit mode. For the memory problem sounds like you have memory skip turned on. To turn off do the same thing as above but turn the tuning dial until CHS displays CHS-OF. Hit DUPE when done.

>thanks all...
>

I'm not familiar with the specifics of the Drake amp, but have used MANY amps thru the years. My comments will not attempt to respond to the internals of the Drake amp, but I WILL point out that it is virtually *POINTLESS* to do what you are suggesting if your purpose is to make any increases in your received signal that even BEGIN to be perceptible. The difference between 1 KW and 1.5 kw is a non-perceptible 1.5 db at BEST, and the only item of significance that will occur will be;

1. More wear and tear on your amp.
2. More heat in your shack.
3. Greater radius of TVi, BCI, and more angry neighbors.
4. Greater profit margin for your local power utility.

Do yourself a favor, and treat yourself, friends and neighbors, and your amp nicely, and they will all reward you with a much longer, kinder relationship!

> Thanks, Jim WA1GPO

Hi, Jim. I looked into this conversion a few years ago (still have the 4740). I couldn't find any way of doing it short of making up a separate IF board. I don't remember the details, but changing the reference oscillator crystal also changed the IF frequencies in a very bad way. Unfortunately, I don't have the schematic any longer (loaned it to a friend, he lost it). I've never seen a radio set up the way the 4740 was designed. Too bad, because the transmit audio is superb. The receiver and the popping squelch were aggravating, though.

The IC-R1 does not have SSB as an operation mode. ONLY AM, FM, and Wide FM. No wonder it did not work on SSB, it is not capable of demodulating SSB.

Mine seems to randomly change bands....had the radio on VHF when I went
to bed and woke up to UHF.....very strange...microphone control was ON

Does anyone know, is there a way to switch bands from the
microphone....(but not using the function keys on top ...like th PF key)

I would like to be able to do this using my HT remote from the radio and
my HT doesnt have a PF key....

Same here. Bought a MFJ TNC/Mic switch box with the wrong board in it. They took it back and sent the right one no problem. They had to open the new boxes to make sure the unit had the right board in it. I have bought from that store several times now with no troubles at all and friendly service. I think with some stores you'll have your not so caring employee. Best to let them (the manager) know about such employees by the way. That is IF they were rude and unhelpful....

If I were to walk into a Ham Radio Store and didn't have my Ham License with me, my Driver's License says who I am and where I live. If I tell the sales person I'm KF6JHG, the call sign database will show a match with my name and address. Thus, that's the proof that I have a license.

I know of no study saying who the jammers are. It's likely we'd find that some have a license and some do not. However unless one has something, like case studies, one can't say that the majority are licensed or not.

The only real solution is for the FCC to crack down on all the jammers and drag them into court. However with all the Federal cuts in spending, that isn't going to happen. If fact, many of the jammers know that and laugh at the people they're jamming, saying, "Ha Ha, you can't touch me!"

A Civil Lawsuit is possible, but the cost of doing it would exceed what several Ham Radio Clubs could afford. Even if they win, the award would never cover all the legal costs. :-(

> > persons.

Most of the the more experienced hams that I've talked to tell me to NEVER respond to the jammer. Pretend that you don't hear him. If need be, just end your conversation ("OK, great talking with you, 73s, KF6JHG clear.") and go off the air. If you must stay on the air, because it's a public service event, have another channel to switch to. Then say, "OK, we're all

going to the OTHER channel now." The jammer won't know what the other channel is.

I've heard other hams say, "self-policing of the bands"; however, I'm not sure what exactly that means. Is it just what I've listed above or is there something else than can be done?

I'd like to hear from others as to what self-policing would be.

In an ideal world, anyone could purchase a transmitter, but only those with the proper license would ever transmit. The next best thing would be to have the FCC come down hard on every jammer. Neither is going to happen that way.

Right now it's easy for anyone to become a jammer. Just go to your local Radio Shack or Ham Store and buy equipment, no questions asked. Requiring some sort of proof of license for the purchase of ham transmitters (new or used) would make it harder for the un-licensed jammer to obtain their equipment. Not impossible, but harder.

I might have a deal that i cant pass up but need more information on rg-8 coax cable.
What i have a possibliity of buying is 2 500 foot rools of older radio shack large rg-8 coax still on the woden spools for a total of 1,000 feet.

I need to know what are the freqency limits of rg-8 coax and other limitations plus what this normally sells for since its parts number is discontinued?

james

Be advise, there are a great number of different types of RG 8 coax, with
such differences as stranded or solid center conductor, foam or solid
dielectric, various shield and jacket types, All combine to make different
characteristics.

Hello Mark,

I bought a used Uniden HR-2510 3 years ago. It works AM,FM,CW and SSB.
It runs about 25 watts. Uniden makes a newer version of the HR-2510,
the HR-2600.

The Radio Shack HTX-100 (I think that's the model) is very close in
desing to the Uniden HR-2510.

Ranger is another popular rig, actually 2 rigs. One rig runs about 25
watts and the other runs 100 watts. There is about $300 difference in
the prices new.

John, that's why they invented the Dremel Mototool! (smile) With that very thin cutoff wheel, and a bit of patience, you can cut durn near anything. Watch it when you do, polystyrene tends to heat up and flow very easily, so you'll have to cut a little bit, then break away what moves out of the slot with your finger, then cut a bit more. After you get done, you can use Testor's model cement to glue it back together, IF your cut seam is small.

Good luck!

A reasonable idea, but who do you think is going to enforce these
laws? The FCC? I hardly think so. The FCC can't or won't do anything
about the numerous rule violators we hear everyday now.

James, um...You want specs for RatShack cable, hu? Well.....In the first
place, honestly, RipOffShack cable is generally reguarded as the
absulute worst cable you can buy. In my opinion, I guess it's OK, but I
wouldn't buy it, and they charge 2 time more for it then anyone else
does. Anyway, about the specs... frequency limits: Well, RG-8 doesn't
exactally have a "frequency Limit", but it is very good cable up to
about 150MHz. Here are the spec:

dB LOSS per 100 FEET For RG-8/U
.09/30 MHz 2.3/150MHz 4.7/450MHz 6.7/900MHz

If you don't know, 3dB of loss is 1/2 of your signal. For example, if
you are transmitting 10 watts, and you have 3dB of loss, then you would
only be transmitting 5 watts if signal. With 6dB of loss, you would only
have 2.5 watts of signal, etc...
Also, that cable should be good for up to about 475 watts at 150 MHz,
and 225 watt at 450 MHz.

These specs are not for Radio Shack cable, but are from another cable
company, but should be about the same. And in here, the cable sells for
.28$ a foot for 1,000 ft or more.

I hope this has been helpful. If you want to reply, PELASE reply to

Don't forget to at least check in with the Northwest Saturday morning swap Page. This is an "on the air" net that covers the Pacific Northwest (and then some) each Saturday Morning, and then posts the net on the web. We also take e-mail listings, read them on the air, and then post them.

See it at http://www.chatlink.com/~rickt/swap.htm

Hope it helps,

Ron, N7TAW

I would be glad to hear what you have to say.

For a factory-built box, it is hard to beat the venerable AEA MM-3 Morse Machine. They show up fairly regularly on the net for $100-150.

If you need something with even more bells and whistles, you will probably need to build a Super CMOS Keyer III available as a partial kit from Idiom Press for about $60.

Perhaps others on the net can help you choose between them or others.

Good luck.

I thought it sounded great. i only got a look at it for a few mins because of the crowds but had a chance to talk with the CEO of Kachina. Kachina makes commercial HF gear for export and wanted to branch into the US market to supplement existing business.

I thought the concept of Kachina was clever...remove all the hardware associated with controlling/operating the radio (displays, knobs, buttons, optoisolators, etc) and use software to do the work instead.

The downside is using an expensive computer to replace buttons and knobs, but with multitasking this shouldnt be a problem.

The head guy also said K1EA has expressed interest in writing contest software to control the Kachina. should be interesting.

Would i buy one? mebbe...after all you big guys get one and we make sure kachina is in business to stay, hi!

From: thomas.g.booth@den.mmc.com
Message-ID: <thomas.g.booth-230597195058@ls-bootht-c.ast.lmco.com>
Source record: 174912

In article <dgfEAnBDG.5II@netcom.com>, dgf@netcom.com (David Feldman)
wrote:

> If you have an idea of what the Carson Bandwidth means in FM transmission
> could you give me a quick rundown or a reference?

The "Carson Bandwidth" is the estimated RF bandwidth of an FM signal, which
is computed using Carson's Rule.

IIRC Carson's Rule was developed before WWII, and (again, IIRC) is named
for John Carson who did a fair amount of work on modulation theory in the
'20s & '30s. I can't cite the original source but you can find discussions
on Carson's Rule in any decent communications textbook.

One way to express Carson's Rule is:

BW = 2(deltaf) + 2(fmod), where
deltaf = peak frequency deviation,
fmod = modulation frequency.

An alternative expression for Carson's Rule is:

BW = 2(deltaf)[1 + 1/(beta)], where
beta = modulation index = deltaf/fmod.

For example, the estimated bandwidth of a broadcast monophonic FM signal
where the maximum deltaf = 75 kHz and the maximum modulation frequency = 15
kHz is:

BW = 2(75 kHz) + 2(15 kHz) = 150 kHz + 30 kHz = 180 kHz.

As I noted above, Carson's Rule is an estimate, because (at least in a
theoretical sense) the bandwidth of any FM signal is infinite. Another
technique to estimate the bandwidth of an FM signal is to determine the
sidebands beyond which all higher order sidebands are less than some level
(say 40 or 60 dB) relative to the unmodulated carrier. This technique will
give bandwidths somewhat larger than that given by Carson's Rule.

Hope this helps -

TGB

Here in Clark County I did much the same thing. The Tech stuff is an easy one for me. And once I learned that I could go to Radio Shack and buy a book for my wife to study we were off on the adventure. Trying to FIND an amateur group is somewhat difficult without a RADIO. I did try to call some of the local groups, but just got the "club answering machine" and never a call-back. Luckily for us, the local Portland (PDX) area has a HRO store that IS in the phone book, and I got some numbers that I could at least find a VE exam within 60 miles.
I now belong to the local club, and ARES/RACES. They also now have a listing in the Yellow Pages. All in all, it has been a good experience so far 3 yrs.
later,
h

Antenna Specialists make excellent antennas. However, 140$ does seem a
little strong!

> Obviously, since the aerial is the most important part I want to get the
> best, but I don't want some huge aerial sticking high up on my car.
> What can you suggest?

I would suggest something along the lines or a K40 or Wilson 1000. The
quality is acceptable and you should be able to snatch one for much less
than 140$.

A 102" whip mounted on one of the back corners of the truck seems to be
pretty hip around these parts. however, you'll get better overall
performance from a whip like the above-noted mounted in the center of
your roof. For best performance, you really have to drill a hole in the
roof and mount the antenna permanently. You may not like this idea but
let's face it, when you go to sell the truck a small bucket of bondo and
some touch up paint will completely conceal it. Either that or just
shove in a hole plug and hope for a short buyer. <G>

If you are concerned with being heard, you could install an outboard
power amplifier to the rig. Bear in mind this is illegal. However, the
noise is often so thick on CB that you need more than 4 watts to "make
the trip".

Cheers!

From: sandy@sandy.com
Message-ID: <5m8k85$ag1@surf.com>
Source record: 174638

You're invited to "See The Quality, Feel The Power"
of the latest Alpha Linear amplifiers at Alpha's
new web site:

http://www.alpha-power-inc.com

For additional information about Alpha amps,
please contact Scott Ehrhorn at:

Tel: (970) 535-4173
Fax: (970) 535-0281
Email: sales@alpha-power-inc.com

Alpha/Power was founded more than a quarter century
ago as ETO (Ehrhorn Technological Operations) to
design and manufacture the best possible maximum-
legal-power, continuous heavy duty, HF linear
amplifier for radio amateurs.

Alpha/Power (ETO) amplifiers contributed to the
expressions brick-on-the-key, maximum legal-power
and all modes, no time limit to the lexicon of
amateur radio. They pioneered the no-compromise
desk top amplifier, hands-off no-tune-up operation,
full break-in (QSK), standard 160 mater coverage,
and microprocessor-controlled automatic bandswitching,
tuneup and remote control.

Alpha/Power (ETO) also has pioneered realistic buyer
protection with long term limited warranties (never
prorated and now an unequaled four years), and the
money-back guarantee.

Please respond directly to Alpha, NOT to me! Thanks.

:
:Charles Francer N1RPD

When I live in Ca, I used to shop at several HRO locations. Note- this was
10 years ago, so the employees may no longer even work there.

The Oakland store had very friendly and helpful staff, while the Burlingame
salesmen right across the bay were the opposite.

I think its just a common problem of Amateur Radio equipment dealers and
managers assuming they can turn ham operators into sales people. They
would probably have better luck hiring used car dealers and then having
them study and get a license. :)

Hams, with all the good things they do in electronics innovation and public
service, are still on the average generally not the best "people persons".

Its too much of a seductive temptation to hire your best ham buddy as a
salesperson, rather than go out and get someone really qualified.

Thanks, Ed

Since the FCC is unwilling to enforce it's own piracy laws on the Ham bands, your statement about "prosecuting those people who *use* the equipment illegally" won't happen.

"Sellers" as a group don't have a vested interest in the Ham bands. "Hams as a group" do have a vested interest. In my opinion, Hams are less likely to sell a Ham transmitter to someone without a license than "Sellers."

Every year, the piracy problem on both the HF and UHF bands gets worse. We need to try our best to stop this, or at least slow it down. If only Hams were permitted to sell Ham transmitters, it would certainly help.

Years ago, the FCC used to require CBers to have a license to broadcast on their 11 meter band. So many people broadcasted without a license, that the FCC eventually gave in. Now you don't need a license.

Imagine if one day, there were so many people using the Ham bands illegally that the FCC decided to "relax" it's licensing laws on the Ham bands. "After all, if so many people want to use the Ham bands illegally, maybe the laws are wrong." Scary thought.

73,
Jimmy

Note: I am posting from a friend's home. My e-mail address for
return is algo@bellatlantic.net

I recently returned to the hobby after 30 years. I have been dealing
with the HRO store in Delaware and have received excellent service and
advice. Went down in person to get my new HF transceiver. They
installed the optional filters and put the rig on the air to confirm
that it worked, actually completing a QSO. Their prices are very
competitive, particularly since they do not charge me for shipping to
NJ, and things usually arrive in 2 business days. The only time I
have been able to significantly beat their price is on specially
priced items sold at major hamfests. No complaints whatsoever from
me.

Hi

I was wondering with the ADMS software, I wish to use a different offset than the ADMS software will allow. I can get this into the template by programming the radio, and uploading it to the computer and as long as i dont try to alter the offset, it will remain as uploaded, but is there any way of making the ADMS program let me select an offset other than .6, 1 or 5 MHZ?

> Peter
>
>
Well Peter, you have a real dilemma on your hands. The best mobile antenna
for CB would be a 9 foot whip mounted on the roof. Anything else is a
compromise. Some people mount this stainless steel whip on their back
bumper to reduce the overall highth. The Wilson K-40 antenna is a good
choice as it is shorter but still very effective. Of course you can use a
shorter antenna and a small (25-50W) R.F. amplifier to make up for the loss
of transmit range. Do not go overboard on the amp as you can not talk to
someone you cannot hear. Good luck in your quest for the ultimate signal
from your mobile. Let us know what you come up with as we mobilers are
always looking for a better antenna.

I believe after the INITIAL charge - you had better go slow.

My gel cel says max 1.75 amps after first charge.

I would just find a good "wall toad" you know those little
transformers that all ht's come with, that is rated at 12v and
anywhere up to 1.0 amps, and hook it up for a while. Monitor with
Volt meter like you said.

Good luck

Dave

Keep in mind that the longer the antenna (up to quarter wave), the better
it radiates. Those small heavily loaded jobs are pretty good dummy loads.
The stainless whip is the cheapest and usually best. $140 seems pretty
pricey. Gud luck. 73's W1DB

The FCC does not have the power to "relax" it's licensing laws on the
Ham bands. The FCC has nothing to do with International Treaty.
Congress would have to "relax" the laws in order for what you imply to
happen.

Cheers!

4330. Two FB mailing lists (QRP)!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: bry@mnsinc.com
Message-ID: <33884620.3889513@news.mnsinc.com>
Source record: 174665

I have found two Great QRP E-MAIL lists!

The first is KNIGHT LIGHTS QRP - a group that started in North Carolina, but they allow folks all over to join in on the fun.

To subscribe:

You can send mail to "majordomo@acpub.duke.edu" with the following command in the body of your email message:

subscribe klqrp

Here's the general information on KLQRP:

The KLQRP list is for discussion of activities like technical projects, special operating events like Field Day or expeditions to the NC Lighthouse locations, get-togethers like meetings at member's houses, events like the hamfests, or other special events.

Here is a bit of philosophy from the list manager (Dave, WA4NID). Let me say that I do NOT plan to be a list policeman, in the sense of regulating or moderating the topics of discussion. Everyone is urged to freely post to these lists and suggest topics for consideration. It is hoped that the lists can become one mode of communication for KnightLite members and other interested hams, which encourages camaraderie and progress in amateur radio pursuits of all types. I hope that people will use these lists to keep in touch with the group as a whole, and to arrange meetings with specific members, and to discuss any QRP or radio-related ideas or plans.

==========

The next is probably the BEST QRP list in the world! G-QRP, where you can meet up with the likes of George Dobbs and the boys that STARTED the current wave of interest in QRP, long ago!

To subscribe:

list, you can send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

unsubscribe gqrp-l bry@mnsinc.com

Here's the general information for the list you've subscribed to, in case you don't already have it:

Welcome to the GQRP-L mailing list!

This is the informational file for the G-QRP mailing list.

The gqrp-l mailing list was founded by members of the G-QRP club as a focus of QRP activity for QRP operators who have access to the Internet in the UK, and further afield.

The list exists for the discussion of technical matters, QRP operating, QRP events and other QRP-related topics. It is intended to be UK orientated and in this respect is not intended to replace the existing QRP mailing list at netcom.com.

There is a simple but strict editorial policy to keep this list a QRP mailing list, not for it to replace uk.radio.amateur, the rec.radio news groups or any other general discussion forum about amateur radio.

How to join the GQRP mailing list:

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

subscribe gqrp-l

How to leave the mailing list:

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email message:

unsubscribe gqrp-l

How to send mail to the list:

send your mail to "gqrp-l@blacksheep.org"

your mail will then be sent to everyone on the list.

How to receive the daily digests:

If you'd rather not receive each individual message, but would like a bulk mail file sent daily containging all that day's messages to the list, then :

send mail to "Majordomo@blacksheep.org" with the following command in the body of your email

message:

subscribe gqrp-l-digest

Remember that this is instead of receiving the
individual messages, so you don't need to subscribe
to gqrp-l as well.

To stop receiving the digests:

send mail to "Majordomo@blacksheep.org" with the
following command in the body of your email
message:

unsubscribe gqrp-l-digest

Rules on use of the list:

Very simply, please bear these in mind when sending
mail to the list

1. No profanities please, this list may be copied
to packet-radio BBS sites.

2. Messages should be of direct interest to QRP
operators. eg:

a. Technical remarks and discussions relating
to QRP equipment

b. Discussions about QRP operating

c. Announcements of contests, QSO parties etc
d. Discussion of operating achievements
e. Anything else which might be of interest to QRP
operators.

3. Please do not over-quote when replying, most
people on the list
pay for their connection to the internet.

4. Whenever possible, reply direct to the sender
rather than the list.

5. Requests sent to the list to unsubscribe from
the list will be ignored! Send these requests to
majordomo@blacksheep.org (see above)

Archives of the list

The list archives can be browsed on the World
Wide Web - point your browser at
http://www.blacksheep.org:8080/gqrp-l/index.html

For great Ham Radio resources on the web, VISIT:

4331. Re: TH-78 cloning mode

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: rlcooper@annap.infi.net
Message-ID: <5m9kn2$7lf$1@nw003.infi.net>
Source record: 174666
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

Just press and hold the 0 key while turning on the radio. First, choose a clear 70 cm and set the PTT to this. When the radio powers up the display will read "CLONE". Do this with a second radio and whichever one you press the PTT on will download it's memory to the other. Be sure both radios are configured for the same number of channels. It may not work well if you have the ME-1 installed in one and not the other. Also, and to my disappointment, it will not clone the alphanumeric messages.

Its still quite a nice feature and it does work. I just recently cloned a second-hand 78A for my wife. I have also used the clone feature of our 732A's.

Good luck, 73, Rick/N3BUT

In article <01bc6487$7619dbe0$e5deb7ce@qe-001>, "Mike Havener" <mhavener@peinc.com> says:

I am interested in purchasing all kinds of compressor/ amplifiers, older microphones, mic preamps,mic mixers and other professional broadcast and recording equipment for my collection and recording studio.

Brands such as Neumann, AKG, Telefunken, UREI, Teletronix, Altec etc.

Especially interested in anything by Langevin and RCA.

The older the better, and basket cases are always welcome.

Thanks in advance.

Geeeeee..... Everybody wants more governmental control over what they do. At least thats what I read here. Have a government agency police sales of ham gear. What a shitty idea. Next thing you know, it will be necessary and OK with people to prove that your bowels are full before you can go to the john.

Ignore the illegal operators. On local repeaters it usually doesn't take long to know if a station is legal or not.

> --
> 73,
> Butch

I notice when someone takes on an unpopular opinion they get labeled with words like "asshole" and "tirade" and "chip on your shoulder" when all I am asking for is good customer service. I know the term "good" is relative and maybe I am expecting more than anyone else but your mention of my possibly being sued for talking about the horrid service I've received at Ham Radio Outlet is laughable. You obviously haven't read enough because the "vote", if want to call it that, seems to be 50/50. I'm certainly not alone in my opinion that's certain. I'm glad to see there are people defending HRO because one sided debates aren't much fun. You, however, are acting like a little kid with nothing to add to the conversation. Grow up..

>
> Charles Francer N1RPD
I suppose this is where the trouble begins. I don't want to be treated "fairly" whatever that is. I want to be treated special, like I have a pocket of money and they need to be nice to me to get it out of my hand. It's really that simple.. if I go to Macy's and I don't like the service, I leave and go to Nordstrom's. Of course I've only done that once because those outfits, atleast the Stanford stores, know about great customer service. You just can't do that with Han Radio Outlet because they are the only game in town, and they know it. Where are you going to go when you don't like their service? Mail order, sure, but most people.. including myself.. enjoy buying a radio and walking out the door with it. Mail order will always come in second in that case.

So I don't want to be treated fairly, I want to be treated like the money spending customer I am. I want to know they appreciate my business and hope I will come back in the future.

> --
> Bill WA8INZ

Why do I have to "give it up"? I'd like to think free speech and expression of different opinion is welcome here. I'm not condemming anyone for shopping at Ham Radio Outlet. I'm just letting people know what I am think. It seems as if some people became defensive when I spoke badly about HRO. I don't know if it is because they were afraid they'd look silly for having spent lots of money their while ignoring the horrid serivce. I don't know if Ham Radio Outlet is the only dealer in their area so they just don't have any other choice. Whatever the case, I should be allowed to express my opion and tell my story. If you don't like it, don't read it. I'd never tell someone not to tell it though, that's opressive.

4347. Charging ICOM battery pack

Newsgroup: rec.radio.amateur.equipment

I have an Icom IC-A22 (aviation) with its stock CM-166 nicd pack and the supplied BM-112U charger. I've noted that the battery pack gets warm within an hour of charging and started thinking... If the battery pack is 600mah rated, and the charger block says it is a 12v, 300mA output, how can the recomendation be for 15 hours of charging? Shouldn't it be more like 3 hours? (150% of rated capacity). Is there a typo here or am I missing something? Have I been overcharging my nicd pack at c/.5 all this time?

Doug Gerard

4351. Who knows anything about Cubic Astro?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: ktidc@aol.com
Message-ID: <19970525165200.MAA27300@ladder01.news.aol.com>
Source record: 174686

I've got a Cubic Astro 150C w/power supply. Since I'm inactive, I'd like to sell it. Does anyone have an approximate value on one? It works great, QSK to die for, tough as nails, etc. It's an unusual rig, but always served me well.

Thanks,

Don't reply to this listing directly (I used AOL) instead

I need help finding a schematic for two old GE mobiles (currently used as local repeaters), especially the wiring for the control head as the controllers are about to be replaced, and the wiring of the old ones us a mess.

the numbers listed on the ID plaques are:

RG56TFS66, or N.P. 243349

and

YG56KJJ66, or N.P. 243349

They appear to be the same radios with different options.

Thanks to all,

Ron, N7TAW

>james
I think it becomes a question of how good a deal you are getting. The
cable is certainly not the worlds best (I was always amazed how flimsy
the braid appeared) but it will certainly work for average
applications, especially in the hf range. Obvously, I wouldn't
recommend it for that 500 foot run to the 450 mhz yagi. I got a 500
foot rool of rg8X mini cable a couple of years ago for ten bucks and
had no trouble finding uses for it at field day, and other odds and
ends. If I had that kind of deal on an old roll of RG8 I'd grab it.
But if it is priced in the $100 or more range, I'd pass, because I
wouldn't pay 10 cents a foot at a flea market for it. 73 gus

4356. TM-241A MIC NEEDS REPAIR

Newsgroup: rec.radio.amateur.equipment

IF ANY ONE HAS INFORMATION OR COULD LEAD ME IN THE DIRECTION OF HELP I WOULD APPRECIATE IT. I WAS IN AN AUTOMOBILE ACCIDENT AND THE MICRO-PHONE CORD OF MY KENWOOD TM-241A WAS PULLED FROM THE RADIO. THE LOCAL DEALER CAN REPLACE THE END I NEED BUT THE TROUBLE IS FINDING OUT WHICH WIRE FROM THE MIC GOES WHERE? THE DEALER SEEMED MORE INTERESTED IN SELLING ME THE ENTIRE MIC! I OPENED UP THE MIC ONLY TO FIND THE WIRES GOING INTO A CIRCUIT BOARD WITH LITTLE OR NO LABELLING ON IT. THERE IS 8 LEADS ON THE RADIO, THE SCHEMATIC SHOWS ALL 8 BEING USED BUT ONLY 7 COMING FROM THE MIC? UNFORTUNELY THE SCHEMATIC IS OF THE RADIO END ONLY, NOTHING ON THE LAYOUT OF THE BOARD IN THE MIC. THE RADIO IS IN WORKING ORDER; A REPLACEMENT MIC IS ABOUT $70 AND THE COST OF THE PLUG IS ONLY ABOUT $6. IF ANYONE CAN GIVE MY ANY INFO I WOULD GREATLY APPRECIATE IT. PLEASE E-MAIL ME AT markjack@netrover.com

Thanks Mark (VE3-UCD)

4358. WTB Kenwood TS-820 digital readout

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: wyatt6gun@aol.com
Message-ID: <19970525172200.NAA29525@ladder01.news.aol.com>
Source record: 174693

I would like to purchase a digital readout for the Kenwood TS-820. It is my understanding that the add on readout is different that the one for the TS-820S. It is important that I am looking for the add on (internal) readout for the plain TS-820. Will consider a basket case TS-820 with digital readout.

Thanks.....Wyatt

4359. FS Kenwood TH-28A

Newsgroup: rec.radio.amateur.equipment

From: dgsholar@gte.net
Message-ID: <5m9tg6$8vf$1@news10.gte.net>
Source record: 174694

Kenwood TH-28A for sale. Excellent HT with 440 receive and 2 Meter receive and transmit. Can operate crossband well, receive on 440 and xmit on 2 meters.

Comes with Kenwood speaker mic (SMC-33) with three function buttons. Also a W&W extended battery 7.2 V and 1500 mAh. (standard battery included of course).

This HT also has included the ME-1 option. This allows the radio to store upto 240 memories. A real power house for a small HT.

$185.00 - an excellent price for all these goodies.

Dave

I would hope that any exchange of ideas over the Net would be a meaningful
exchange. The fact that we can't agree doesn't matter, because we can cover
the points and counter points of ideas. Maybe even consider different points
of view.

However, if all you can say is, "unh-huh.....(yawn)", why bother to post your
answer?

If you don't care for what I think, don't read it.

4365. Kenwood V7A Problems!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: Todd Snyder <kb9nvh@bluemarble.net>
Message-ID: <33889B55.5770@bluemarble.net>
Source record: 174700

Im the proud new owner of a Kenwood V7A (for the past week or so) and here are my first impressions: (the other radio I own is an Icom Z1A HT)

I was at dayton and I first purchased an Icom 2710H ($509). I got it home and found (I should have know this before but....) that the radio had no alph-numerics (unlike my Z1A). I then found that the cross band duplexing was hardly mentioned in the manual and in no way did it tell you how to implement it. At first I assumed it wouldn't do it since it wasnt mentioned. The code and tone squelch are optional on this radio (about $140 bucks for both). (you need the DTMF code option to remotely change frequencies)

I traded the radio for a Kenwood V7A (same price). The V7A comes standard with code and tone squelch, Alpha numerics and the manual goes in depth on how to implement the cross banding both one way and two.

First impression of the V7A was great!!! Modes, settings and functions are relatively easy to use compaired to my Z1A (but not a no brainer like others have described).

The radio is in every way equal or superior to my Z1A (HT) except the scan mode, although it allows you to skip saved memory channels (via setting the "lock" attribute for that channel by going in through the menu. This is not as easy as it could be).

Unlike the Z1A the Kenwood will not let you choose to scan "all" saved memories or just the unlocked ones. The Z1A allows you to do this and is a poor attempt at banking.

(Why dont the radio manufacturers take a lesson from the scanner manufacterers and add banks to their memory channels)

The Icom 2710H looses no sensitivity when using the radio in VHF/VHF or UHF/UHF mode.....but the Kenwood does. The Kenwood goes from .16uV to .26uV when using both sides on the same band....(this hasn't been a problem for me yet)

Problems I have encounterd so far:

Cant seem to change bands remotely from an HT keypad (you can change bands from the mic PF key). This is important for being able to remotely control both sides of the radio.

With mic control turned on noises in the room can (and will) randomly set and change functions in the radio (this is bad). Supposedly Kenwood has a fix for this now.

After playing with the radio for the first day or two..it seemed to be acting strangly so I reset it and started over (it was just as well since I could do a better job at it the second time)

Today, after scanning all morning, I responded to a call and found that the repeater I was talkning on sounded off frequency. I moved up 5khz and that was it...the signal came in good now...but my tone squelch did not work and there was no way I could set it. After investigation I found that my recieve was off by 5Khz but my TX was fine. and tone squelch was hosed....

I had to reset and after that..all was fine again..(except now I have to put all my alpha numerics in for a third time...)

To sum Up...I am worried about this radio....I dont want to be resetting it every two days...I seems that the radio still has some rough edges to work out. Once these problems are defined and fixed this radio will probably be the best value dual bander on the market (IMHO).
The display is unique (blue dot matrix). Hopfully the radio can have its software updated (ROM) as they fix these bugs.

If you have any questions or comments please respond here so everyone can benifit from the discussion....

Todd Snyder (KB9NVH)

>audio filter.
>

Hi....just thought I would pass along my experiences with the IC756. I upgraded from the IC745 to the IC756 and am very happy with it. I knew I wanted the unit as soon as I saw it advertised.

I have found the DSP adequate but what REALLY shines on this unit is the Noise Blanker circuit. I have had S7-S9 noise levels that the NB circuit took to an S3 or below but DID NOT degrade a recieved signal. The major limiting factor here is the noise must be pulse type noise, such as motor noise from a car ignition system etc. It will not do you any good on something like computer hash, lightning crashes, etc. The DSP seems to work fairly well.

>
> >William Lee

Legality dosen't matter. Actual performance dosen't matter. What matters
is how can I impress my friends with the amount of money I dumped into
this crap.

These guys buy antenna gadgets for insane prices that have absolutely no
measurable effects, screw up their audio with processors and reverbs, add
in a "roger beep" that's 20 dB overmod, operate on any frequency they can
get their gear to run on, (remote control users.. TOO BAD!)

In actual fact, if the band is open, you can work the world with 5W (on 10
meters, where it's legal). If the band is closed, then no amount of power
will help. the only use for all this junk is a nightly screaming match.
Repeat
in every town out to the edge of ground wave propagation, and it's no
wonder
you can't use CB for anything useful anymore.

Back in my CB days, I used to get a lot of fun by outperforming very
expensive
base stations from a 5W mobile rig. Of course I read and understood the
ARRL antenna handbook, and actually installed my system properly..
The total cost of my antenna mod was about a nickel.

Still, they don't care what problems they cause for other users in the fire
and
police bands, ham bands, TVI.. Just as long as they can out-shout the
idiot down the street, that's what matters.

4375. Collins 561S-1 HF receiver

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: PA2JBC <a0927429@dsbmail.itg.ti.com>
Message-ID: <01bc6955$f8509ae0$8f0aaa9d@pc-tir22.pac.sc.ti.com>
Source record: 174710

I am selling my Collins 561S-1 receiver. This is a late model with the LED frequency readout.
The radio is pristine, original condition, no mods.
I had new USB and LSB Collins filters installed, the steel version, as the old (plastic case) filters had too much insertion loss.
It comes with the original manual (no copy), an original memory backup battery that plugs in the back,
a spare RF module, and a spare front panel and switches that I once found at a ham fest

I also have the 19" rack & original speaker for it

I am asking $900 + shipping

Please respond to A0927429@dsbmail.itg.ti.com

4376. Wanted: Manual for AVO CT160 valve tester

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC

fit the 727r,dont care about the cells inside just the case.

4378. Wanted: HW-8 manual

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: hz37@dial.pipex.com
Message-ID: <3388b9dc.90411493@news.dial.pipex.com>
Source record: 174713

Hello,

I have recently acquired a Heathkit HW-8. It works, after a fashion
but has low output and less than perfect audio. I have bought the HW-8
Handbook but I am keen to try and obtain the original HW-8 manual as
supplied by Heath.

Does anyone have a copy they would like to sell, or better still,
could someone photocopy the manual for me? I would gladly recompense
any expense!

Many thanks. You can reply to my home email address:
al@boltons.demon.co.uk

or my other work email address: al_bolton@mon.bbc.co.uk

Would anyone know where i could get some of those hoods that fit on the back of a chassis mount PL239 for shielding. I haven't seen any of those for 20 years but i know they are still being manufactered because i seen them in a Digikey catalog a few years back, but now that i need some they don't carry them anymore. Would appreciate it if you could steer me in the right direction.

4380. Re: Charging ICOM battery pack

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-25 00:00:00 UTC
From: griffin@jgfl1.allcon.com
Message-ID: <EAr2LA.30E@jgfl1.allcon.com>
Source record: 174715

AFAIK Icom battery packs contain circuitry to control the
charging process; just apply 12-15V to the appropriate connector
for about 14 hours. However, the contacts on the bottom are
connected directly to allow for an external charger.
The drop-in charger connects directly to the cells and can
be used for fast charging. I'd recommend checking the
manual of the charger.

Hope that helps,
73, Jens, DB9LL

4392. ICOM 756 Oscillator fixed??

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-26 00:00:00 UTC
From: kevinm@infinity.ccsi.com
Message-ID: <5mapnmsij1@quest.ccsi.com>
Source record: 174485

The QST review of the 756 indicated the noisy hfo had been fixed.
Has anyone had experience with the modified radio? With the old hfo,
reciprocal mixing with a 9+40 received carrier would give the carrier
10-15 KHz wide S8 sidebands. Is the modified radio better? Thanks.

James,
It's been my experience the "cheap" cable sold at RS is seldom a good
deal. Think about it. Your going to likely install some or all of this
outside in the sun and elements. My experience is it will begin to
quickly contaminate. I recommend you buy the best cable you possibly
can for your application. Use gel filled, xelon jacketed, cable if you
are going to be in the elements.

If Radio Shack had the power to create a new class of radio service (FRS) do you think they'll allow a piece of legislation that says only licensed hams can SELL equipment? They're lucky if they can get sales help who can read! You can't even get legislation that says you must POSSESS a valid amateur ticket to buy ham gear lest Grandma might want to buy that HTX-242 for little Billy, the ham.

You didn't post what VOLTAGE your gel cell was designed for!

Without that, or some way to figure out from the description of a
part number that we might be able to cross reference to voltage,
there is no answer to the question!

Plugging a 1.5 volt gel cell into a 12 volt nominal charger could
be a disaster! :)

Now to anticipte a bit... :) If this *IS* a nominal 12 volt cell, then
you can charge it with any charger that has more voltage than the level

to which it has decayed. So-called 12 volt lead-acid car batteries have a peak charging(ed) voltage of about 13.6 volts DC. The higher the charging voltage is across a discharged cell, the higher will be the current drawn. At roughly the 13.6 volt level, when the battery becomes fully charged, the current will go down.

Your 500 MA charger may or may not have current protection in it. It *might* be suitable to charge the gel cell, assuming the design voltage range for it is OK for the cell. It may be that it will work fine, just take about 14-20 hours to fully charge the cell. An ammeter in series with the charger will telll you if the draw is over the 500 MA level or not, assuming the whole mess is the same nominal voltage level.

Batteries that are *identical* can, sometimes, be connected in parallel. Note that even they be physically alike, the cells inside them may be slightly different due to aging. Therefore, yes, you can gain current capacity this way and also gain run time for equipment fed with batteries in parallel, but be prepared to also find out that one battery may actually discharge the other one due to a weak cell you do not know about!.

The most important thing to know about all this is something you touched on, but didn't comment about. Be *very* sure, when you parallel two batteries, *not* to get the polarity wrong. Of course there will be lots of sparks if you make an error, but less often, should you get things welded together or clamped solidly, by accident, you can be a *very* badly hurt soul. Under massive charge/discharge scenarios, batteries EXPLODE. Mis-used, they can burn you, blow acid on you, blind you or whatever, and, set fire to things all around them.

High capacity alkaline cells are a real problem for this, as are gel cells.

I hope nobody takes you to task for posting your request. A lot of us may not realize you may be a book ham. We were all that, once. I've tried to help with what you asked in that light.... assuming you were seriously asking for help...

Count the days until FRS goes the same way. I'm sure there will
be idiots trying to "shoot skip" on UHF.

Round' here, the 154 MHz VHF "dot" channels are already plagued
with "I'm stepping on you" idiots. I turned on the radio one
night and swore I was listening to CB channel 14.

It is just amazing what happens when technology is placed into
the hands of the "average" person.

Cheers,

Hi Gery,

I picked up a Schurr paddle a few months ago and while I am no CW speed
demon I sure enjoy it. I have a Bencher and there is no comparison the
the Schurr has a light yet very sturdy touch. I have mine adjusted so
that the gap is fairly small and the spring tension is much lower than
the lowest adjustment I can get on a Bencher. If you want to spend that
much money It's worth it.

PS - I have the full sized model (haven't tried the portable one)

All kidding aside, you could consider taking one of the small
fiberglass antennas from like Comet or Diamond, the multi-band models
that are only about 6ft. tall, paint them black, mount it on the patio
and affix a lampshade or other concealment to it. It will not affect
your pattern and being on the 19th floor, 4.5db on 2m and 7.6 on 70cm
should be plenty of gain. And besides, it won't look like an antenna,
so the condo. association should have no problem with it. Think of the
possiblities.. 73..

Ok, here's my sad story.

I got a new Kenwood TS-570D on Friday, hooked it up and loved it. Very nice rig. I'm running it into an MFJ vertical that has reasonably low SWR on all the bands I use.

On Sunday, I made a contact with Grenada, tuned down 20m and found a station from Belfast. I couldn't work him. I look at my power output and it is about 8 watts maybe (the dial is at 100W). I push the AT button, and it shows infinite SWR and clicks until I stop it. I took the AT out of line and I still have just a few watts out but my SWR is about 1.2:1.

I verified all the numbers with an external power/SWR meter and they are correct. I then swapped in my TS120S (yechh) and it works fine with 99 watts out.

OK, so it will have to go in for warantee repair. My question is: I have heard some people have had trouble with the auto tuner tuning into 3:1 loads. However, it seems to me that this trouble would go away if you took the AT out of line, right? So this is probably something else. My primary concern is did I fry this thing somehow? I don't think so, but I don't want to get it fixed and the fry it again.

BTW, I did remove the case, and nothing seemed amiss (no burned parts or anything). Any comments?

This message isn't meant to be a slam on the 570. I liked it very much -- especially for RTTY and CW. If there is any problem its that the DSP lets you hear people who probably can't hear you with their old receivers! Not a bad problem to have. Even then I worked 6 countries, and 14 states in 3 days, Worked 3 RS12 passes, and had a blast.

73,

Al WD5GNR

I use it now to work 41 metres and 75 metres (overlapping with 40
metre and 80 metre HAM). I also have the remote VFO for it. I have not
tested the Xmit circuits yet since I do not have a ticket...

Hi

As Im going to have an inspection to my station I need to have my
radio transmitting only in the following frequencies:

1830-1850
3500-3800
7000-7100
10100-10150
14000-14350
18068-18168
21000-21450
24890-24990
28000-29700
All in KHz

What can I do to chnage my rig in order to trasmit only in these
frequencies?

Thank you very much, Andre Brandao,

I used to have good luck with a 5/8 wave "Firestick" top loaded coil type- they've got them as short as 2 ft long, which work very well even at highway speeds with a 6 inch mag mount set- can get both of these at your friendly neighborhood truck stop for a total of about $20! Also works great as a scanner antenna.....but not so hot on 2 M!

If you ask a question remove the anti spam or expect a reply here..

Since the TM732A does not have a diode D124 and D124 I guess you are
talking about D213 and D214.

They are the tx-rx switching diodes and NOT-AVAILABLE at radio shack.

D213---MI407

I am looking for any type of Motorola control head for any model of transceiver. I will be using this for a specialized project and only require it to have a place for these controls: volume, squelch, mic connector. Howeve these items do not have to be present since I will have to install other components in these spots.

Dig deep into those junk boxes and let me know. I will reimberse shipping costs and will be willing to pay a small price if needed.

Source record: 174543

Hi,
I have for sale a Yaesu 2 meter FT-290 multi-mode (SSB/CW/FM) rig,
complete with mobile mount, hand mike, separate NI-Cad battery pack,
batteries, and charger. Includes manual. Rig has never been run mobile,
just in my shack, and is clean but has a few minor scratches. The reason
I'm selling it is that I replaced it with a Yaesu FT-736. Also I am a
non-smoker.
$500.00 Prepaid shipping to lower 48.

4453. MARS mod for FT-920

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-26 00:00:00 UTC
From: "Robert L. Willsey" <w4nul@mail.brightok.net>
Message-ID: <3389EF39.4E8E@mail.brightok.net>
Source record: 174546

Does anyone have the mod for the new FT-920 to put it on the AF MARS frequencies?? I just got mine and was told it would be several weeks before I could get the mod as I need to send the license for MARS operation to the company before I can get it. My AF MARS call is AFA4IO. Any help would be appreciated.

BTW the radio is really nice and the dsp unit in it works great!!

73 de Bob w4nul@brightok.net

4454. Re: Blown Diodes

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-26 00:00:00 UTC
From: "Barry L. Ornitz" <ornitz@tricon.net>
Message-ID: <01bc6a2b$ceefeee0$367fb0cc@ornitz.tricon.net>
Source record: 174547
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.boatanchors

The 1N3487 is a little bit of an oddball since its reverse voltage rating is 1200 volts.
The forward current is rated at 400 mA. If the voltage to the diodes is such that more common 1000 PIV diodes will work, use the common 1N4007 diode. To be extra careful, replace each 1N3487 with two 1N4007 diodes in series - thus giving a higher safety factor. At typically less than a dime each, the extra 40 cents is well worth it.
The 1N4007 is rated at 1 amp forward current and 1000 PIV.

Here's an update for all. It seems now that having the ACC2 plug plugged into my RTTY TU when Windows is running is causing the problem! The wiring goes to a serial port to the FSK, AF in/out, PTT, and GND.

So! I'll report what I find out. At this point it seems to be either a bad connector or something with the ACC2 connector. I can't figure out why any of those inputs would do it. BTW, the TU does work when the software is running.

Thanks for everyone's help.

4457. Question About IC-2AT Battery Packs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-26 00:00:00 UTC
From: keymaster@stlnet.com
Message-ID: <864692225.14365@dejanews.com>
Source record: 174550
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

Can anyone help me with a small problem I'm having with an older Icom IC-2AT?

I bought this radio in the early 1980s and it refuses to die so I decided to buy a new battery pack for it. The pack I bought is the ICOM BP-4 which does not contain NiCds but has room to insert regular dry cell batteries. When I attached the new battery pack to the radio, there was no power to it. I double checked the batteries to make sure that they were good and I also checked to make sure that they were inserted correctly. When I use my older BP-3 NiCD battery back (purchased 5 or more years ago), the radio works fine.

I noticed that the new BP-4 does not have a round steel ball on the top of the battery pack as does the BP-3. It appears as though this is one of the contacts for power. I wonder if this might be the problem. I asked ICOM if the BP-4 was compatible with the IC-2AT and they said "Yes". Is it possible that my IC-2AT is too old to be used with the BP-4? Am I overlooking something obvious?

Any help you guys can offer would be appreciated!

Thanks!

From: Chris Thompson <cthompson01@sprynet.com>
Message-ID: <338A1880.34AB@sprynet.com>
Source record: 174552

I have an RS HTX-212 that is only putting out 20 watts instead of the specified 45. Does anyone have the shop manual for this rig? If so, would you please tell me which potentiometer controls the output power?

I would like to try to correct the problem myself before sending it in for service.

FYI: I'm running the rig with an antenna set up of less than 1.5:1 so its not backing down the power because of a mismatch.

Please respond via email

Chris N1NIQ

Make sure the contacts on each of the two halves of the BP-4 case are
making electrical contact when the case is assembled. That is the weak
link in the design.

4464. Questions for FT-51R owner... (51R vs. TH-79)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-26 00:00:00 UTC
From: Matt Staroscik <staroscik@sowest.net>
Message-ID: <3389BEE8.948@sowest.net>
Source record: 174557

I am torn between getting the Kenwood TH-79 and the Yaesu FT-51R. I have a couple of friends with the Kenwood, and I am familiar with its features. However I don't know anyone who owns the Yaesu, so I have to rely on catalogs and the net to get familiar with it. I have a couple of specific questions that I have been unable to get answered, and I hope a FT-51R owner can take a minute to help me out...

First, is adjusting the squelch a multi-step operation? (Is there a dedicated squelch control on top?)

Second, the paging features - does it use plain DTMF, or something else to send pages? (I want to interoperate with my Kenwood buddies. The TH-79 listens for DTMF tones you can send manually, I hope the Yaesu does too.)

Lastly, any considerations for operating the unit in an RF-busy area such as Los Angeles?

Many thanks in advance for your help. Post or email replies, I follow the group...

4469. Problem with IC-31E

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-27 00:00:00 UTC
From: frode@sp067.cern.ch
Message-ID: <frode.864735903@news.cern.ch>
Source record: 174375

I am posting this again for a friend, LA8WF - Jon, who has problems
posting to the USENET groups. He is in need of help to get his IC-31
functioning again. Please reply directly to Jon at: jd @nera.no
or post a follow-up to: rec.radio.amateur.equipment

Many thanks.

73's Frode, F/LA2RL

I was trying to run the IC-31E on external power using the cable intended
from Icom, observing correct polarity (black =neg.supply).
The powersupply was set to abt 6 volts. The battery was fitted, and it was
close to empty.
The lock key was put in Lock position. As I was afraid of overcharging the
battery , I sat the pwr-supply
for current limiting. I discowered a pulsating current from the pwr.supply,
Probably the low-power function
you have on theese radios started its normal operation.
Then I touched a butten when reaching for the IC-31E. I discowered the
display was blank.!!
Removing the ext. pwr cable and replacing the battery with a charged one
did not help, I could not get the radio on!
Tried resetting without ereasing the channels programmed. Same problem.
At last , by plugging and unplugging the ext. pwr cable the RX functioned,
but the RX draws too much current!!!
With power off it draws abt. 200mA (the batt. removed).
When I measure the voltage by using the radios keys and display, it shows
only 0,8 volts!
Help needed!

4477. R. Langston's connector's are unsafe!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-27 00:00:00 UTC
From: toms@inconnect.inconnect.com
Message-ID: <5mf4j8cfi3@news.inconnect.com>
Source record: 174383

I was looking through the Digikey catalog where I found the connectors R. Langston sells for $.84 unit price (quantities of 1). The current rating on this connector is only 11 Amps. Unless your radio supports seperating the positive lead into two seperate pins, this will draw excessive current for the connector. The same applies for the negative. This is only unsafe if your radio has only two pins (+ and -). On my IC-738, it will work OK because ICOM parallels the leads into the radio to seperate the current. QST should let people know this since they are accepting the advertising in the back of the mag.

Can someone tell me about undocumented key combinations? I think there may be a way of entering any frequency in the VFO limit memory M(1 sec)+4 and M(1 sec)+7. I�ve been trying to figure it out but unsuccessfully. I cloned a TH-79 to my TH-28 and it's doing 118-512 continuous but I'm still not happy...

>Is there an easy way to reduce the output power on this radio? I need
>to reduce power on 75m to avoid an rfi problem.

Sure... just turn down the mic gain on SSB or the Carrier level on CW. Power output will be reduced. You can go down to just a few Watts by cranking back these controls.

4490. HF -> 6M & 2M Transverters

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-27 00:00:00 UTC
From: Todd Schroder <schroder@erols.com>
Message-ID: <338B5ED4.3AEE@erols.com>
Source record: 174396

Does someone know of any manufacturers who make HF to 6M and 2M transverters? I am interested in trying 6M and I would like all-mode 2M capability but I am not interested in paying for a 6M rig or an all-mode 2M rig. Are HF to 2M transverters practical? I believe Ten Tec makes kit/assembled units. Are these the only currently produced units available? Are there older models from other manufacturers worth considering on the used market? I remember having 6M and 2M transverters with my Heath Mohawk receiver, but those were for receive only. If anyone has transverter experience, could you pass along some wisdom?

Thanks,
Todd

: Obviously, since the aerial is the most important part I want to get the
: best, but I don't want some huge aerial sticking high up on my car.
: What can you suggest?
: Peter

The best performance will be had by using a full length 1/4 wave
whip (102"). They actually look OK on a pathfinder when mounted on the
back bumper at one corner.

If you desire a somewhat shorter antenna, and don't mind mounting
it on the roof, then a base-loaded whip will perform well. There's
basically 2 kinds of these (this is oversimplified, but will give you
an idea of what's important for efficiency)

1) Steel whips about 35" long. They tend to radiate mostly from
the whip; the bottom loading coil is used mainly for matching.

2) Steel whips about 51" long. These usually are designed so that
the coil radiates some of the signal as well as the whip. They
tend to be more efficient than the #1 type. (K40 is one of many
in this class)

All bottom loaded antennas perform poorly if the coil isn't
positioned so that it's free of metal obstructions.

If you want to mount a whip off the corner bumpers or side of a
vehicle and don't want the size of a 9' whip, then I'd recommend using
a top loaded whip (your standard 4' white truckers antenna). These
antennas move the current node as far up the whip as possible which
increases efficiency, and are better able to deal with unusual ground
plane irregularities found when corner-mounting.

I too am a newly licensed Ham! One of my class instructors had a Yaesu FT-51R and so I had someone to talk to, the actual unit to play with. Well I bought one and am very happy. It's kind of pricey... $479 (HRO) for the higher power (battery voltage) unit. Also bought a Premier AL800 dual band antenna since it close to 60 miles between me and some of the repeaters I purchased a extra Ni Hydride battery, a must else you are off the air when the battery goes! The little rubber duck antenna worked but the AL800 gives me better signal strength. Hope this helps!

Well, I'm not saying that anyone should buy an amplifier just because
damn near everyone else has one. <G>

The reality of the situation is that you need a lot of grunt just to get
across the street when the noise level is high. The standard mobile
install of a VHF-lo commercial two-way radio is 50Watts, with most
running 80W+. For VHF it is 25Watts and UHF 25Watts as well. Most
repeaters are running 50-100Watts.

If 5Watts is "good enough for anybody", I've seen no evidence of that!

Cheers!

> I am not familiar with that model.
>

I know this wasn't directed a me, but I have an FTV-700. I believe it uses the same modules as your DM-901, but only one can be installed at a time. I have the modules for 144 and 432 Mhz. It takes about 3 to 5 minutes to swap them is you use all the screws. It is designed to work with the Yaesu FT-77 HF transeiver that has a special low level output and an input from the transverter to latch out the tranceivers finals. It works very nice.

The current rating is the same as the connectors used by ICOM, etc. The 20-amp radios all double-up and use two pins for each polarity.

For 2 meter you might try the ventenna, mounts over the vent pipe on the top of your roof, totally hidden. If you are talking HF, you have to use the antenna tape, and mount it around the eaves of the house.

Good Luck N1WSA

Source record: 174567

You guys who operate QRP protable will be interested in this gadget I found at Walmart. It's called "Handy Power System" and sells for $25. I found it in the automotive battery section. Basically, It's a self-contained, battery power system with a built in charger, flashlight and multible power jacks for most anything. Indicator leds keep you informed of the charge level. It is supposed to supply 4 amp hours which should be plenty for a day in the field with a qrp or 2 meter ht. Another nice feature is the shoulder strap and carying handle. Charging voltage can come from either a 12v wall wart or from the cigar lighter in the car. At $25 I found it hard to pass up.

I'm going to use it while mobiling. My TenTec qrp rig requires super regulated dc voltage that I just can't get from the car's system. I'll just put the power system behing the driver's seat and plug the rig into it's one of 2 built in cigar lighter jacks.

No, I don't work for Walmart. Just thought I'de pass along a nice accessory for your station.

>>"Yes". Is it possible that my IC-2AT is too old to be used with the
>>BP-4? Am I overlooking something obvious?

If the 2AT battery connections are like the IC-A20 aviation transceiver
(and I think they are), the little steel ball on the top of the battery
pack is a *charging* contact. It's used for charging the battery pack
when it is mounted on the radio and the radio is supplied with external
13.8 V. Since the BP-4 is for non-rechargeable batteries, it won't have
this contact.

The contact for discharging the battery is a small screw off to one
side of centre. Common ground is the metal rails that the pack attaches
to the transceiver with.

You might try calling MPD in Owensboro, Kentucky. They are the
former GE plant, and now make the planar triodes. It's been a few
years since I represented them, but I think they still make them. I
know they make some for their own use in amplifiers and oscillators.

Good luck with your search.

I am French. I am going this summer to the USA (NY and Philadelphia).
My uncle is a ham radio. He would like to get some information about
this product : MFJ-259 SWR Analyzer.

- Where can I find it in NY or Philadelphia ?
- What is the price ? Do you have any adress which sells them at the
lowest cost as possible ?
- What is about V.A.T. ? Especially when you export a product from
the USA to France ?

Thanks for all the information you can give me.

4540. Rotor OR-2800 and RC2800P-A (Ctrl.Unit)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-28 00:00:00 UTC
From: Thomas Krull <df1hx@flux.hh.provi.de>
Message-ID: <m37mgjtk4j.fsf@flux.hh.provi.de>
Source record: 174223
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

Hi !
I recently bought the Rotor and control unit mentioned above. After instal-
lation both worked fine for a couple of days...
However, when i push the CC or CCW bottom in Mode 0 (manual mode) on the
control unit, the rotor starts moving into the direction desired, after
releasing the bottom the rotor stops, but the display continues to
count until the 'Limit' is reached and the box is 'dead', no reaction on
any command, i have to reset it by turning off/on. The counting stops when
i push the the bottom 'opposite' to wanted direction, i.e. 'CCW' when 'CW'
was the direction i wanted to 'go', this causes the box to 'crash' again,
no more commands accepted.
I tried to program the unit according to the manual but no luck, when en-
tering mode 3, the unit counts to limit again after pushing 'CW' or 'CCW'
slightly and the box crashes too. Mode 1 (manual preset) shows same problem,
the counting does not stop when releasing the direction bottom.
Resetting the box to factory defaults (mode 6 -> save) did not remove the
problem.
Wiring (checked) is ok and dry.

I brought the control back to the dealer, since this is a matter of waranty,
but i am curious about the reason, i guess something in the control box
went mad...

thnx ahead and 73s,
de Thomas [DF1HX]

A lot of good stuff would go to the dumps.
Also, I told a guy he needed a license, but that I would help him get a listening antenna up so he could study code.

A fews weeks later, I bought his entire shack, inherited from his deceased father-in-law, for a C-note. He had ignored my good advice and paid the price for putting a KW on an untuned antenna.

Blown fuses, blown resisters, gassy tubes, not hard to fix, but he had used up my patience when he went illegal.

Oh, well.

>Matt Staroscik KF6IYW "It's not a doll -
>staroscik@sowest.net it's an ACTION FIGURE."

Well Matt, here's my 2-cents worth. The FT-51R (and I don't own one) is very
expensive for what you get, it's at least 50 bucks more than the K'wood. Also,
every Yaesu HT I've ever owned or heard has puny audio.

The K'wood TH79A is a nice rig, but if you want extended Rx on UHF, get ready
to open the rig and work on surface mount technology. Or, pay someone who can.

My suggestion? The Icom W-32A. And, I do own one. Recent "price adjustments"
have the W-32A in the $350-360 range. That's about $40 less than the TH-79A
and $100 less than the FT-51R. The W-32A has a hot receiver that goes
virtually "everywhere" with a simple keyboard mod, audio is good, display and
keypad are great. Oh, BTW, I'm not an employee or in any way connected with
Icom, I just like the radio.

I have an 85 dodge and have a severe problem with static from the spark plugs, despite putting in new plugs, wires, cap and rotor, nothing seems to eliminate it. I've added a filter on the two way radios at the battery and they are clean on TX but weak receive signals are still prone to static. Even a ht in the car with no physical connections suffers from this problem! I have mag core suppression wires, but I'm wondering if there is a better spark plug I could use? Any suggestions?

Ten-Tec makes kit and assembled transverters; I believe their offerings include 20M -> 6M, 2M -> 6M, and a 2M (don't recall if it's 20M or 10M input) unit. Either QST or 73 has done a review of the 20M unit in a recent issue.

Down East Microwave makes transverter kits, likely for the higher bands.

I recall Drake had a 20M -> 6M/2M transverter for their T4x/R4x models.

I have an AL-80B i bought new in DEC 96. Thus far it has met all claims
by AMERITRON and my expectations. Plus the relay is fast enough for me
to use it at night for 40 meter pactor links to conus. Good bang for the
buck!

Well, they are easier to install but when I put a cable made up with a pair on my HP network analyzer and a precision termination, the best reuen loss was 14 dB (at 1296- my freq of interest). This compared with 24dB return loss with the old style N's. They may be fine at 70cM and lower.

From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <01bc6bbc$29aa94c0$37d1bbcd@pemble.ix.netcom.com>
Source record: 174298

Check the output voltage of the charger without any battery connected. It should
read 12.0 to 13.5VDC (what mine is - service manual says 12.5V at 0 ma load).
If the voltage is OK, does the red LED on the wall plug transformer turn on when you plug it into the battery?
with the battery un-connected, the LED won't come on. it comes on when there is current flow.
If the light doesn't come on, try shorting the output connecter through a 120 Ohm Resistor. The light should come on.
According to the service manual, the rated DC current is 42.5ma at 5.5V loaded - a 120 Ohm resistor will draw that.
-- with your meter, measure the current through the resistor

If the voltage is OK, and the current is OK -- then it is your battery.

Good Luck

A couple of notes before I go. I rebuilt a battery once and it was no good. 2nd try (a few years later - OK)
not all batteries on the market are good, apparently.

also: the charge unit is nothing more thant a 10V / 42.5 Ma xfmer with a single diode and a 100 Ohm
resistor in series. Should be easy to build.if you can't find a replacement

cheers

FS: Packet setup for $25

I have for sale a Bell 202 modem, plus all the parts
and instructions to put this on the air for packet
use. It works much like the new BayComm modems, and
in fact uses the same software. The modem is external
and plugs into the wall. All parts are included to
wire your HT or mobile radio. Basically, the only
thing you have to do is create the cable to go from
the modem to the radio using the supplied components
to detect the PTT and feed the audio. Also a regular
old 25pin cable is needed for between the computer
and the modem. You don't need to be an EE to figure
out this little homebrew project, but a simple knowledge
of soldering, etc. is suggested. A good amount of literature is
included with articles from ham radio magazines as well as
schematics on how to make the patch cable. I'm
reselling this item as I bought it myself a few months
ago for the same price. I plugged in the modem to the
wall, and it turns on and appears to work fine. After
I received the equipment, I never got the chance to
make the cable and get it on the air since. At this
point, my packet connections on the radio are being
used by an autopatch, so I don't really have the means
to use this item conveniently. It can't compete with
high-end TNC's, but hopefully someone else
can use it to get started on packet for a low price.
Included is the software, modem, parts, literature, and
schematics. I ship only USPS, and only in the CONUS
with a prepaid USPS MO. If you would like to purchase
or have a question, please email reply me. Thanks.

Source record: 174305

There's a mod posted somewhere on the internet for faster scan speed, expanded RX for 800 MHz but it doesn't work and I think Bill Cheek's book explains how to expand the memory.

I don't have any of these mods but I am looking for a selectable step rate mod. The scanner scans at 5kHz steps in VHF-LO and VHF-HI, 25 kHz in AIR and 12.5 kHz in the UHF band (380 to 512 MHz). The step rate is band dependent on this model.

Does anyone have a schematic or service manual so they can see if a switch can be added to manually select the logic for the step rate?

This would be very useful for someone with the PRO-2021 and a GRE Super Convertor setup (806 to 912 MHz). Some usages in the 800 and 900 MHz band use step rates other then 12.5 kHz.

Can anyone help me out?

> there any filter that can help quiet this?
>
> Thanks,
>
> Lee H.You really need to determine the source. We have seen a number of cases of CATV leakage from CH19 that is ON frequency- no filter can help here. Pagers account for over 95% of 2M intermod- you should be able to hear the annoying pacsog modulation if this is the case. Pager or other well defined interference has been taken care of thousands of times by our patented notch filters- they are small, allow uninterrupted general coverage RX and can be left in line on dual band rigs. Available through A.E.S and many other distributors or direct.
If the problem is not from a well grouped set of offenders, a bandpass filter is your best bet. Stay away from the small units that require +12V- they have a LOT of RX loss. DCI in Canada makes a fine bandpass filter.

: Before making dedicated VHF/UHF all mode radios, YAESU had RX-TX
: transceivers for FT-77 and FT-707. Maybe you can get one of these but
: I can tell you it's difficult. They put up to 25 watt in 70cm, I
: think.

: 73s
: Mark Dickens

FT700 would also work with the FT 757 for your choice of 6m 2m, or 432MHZ
one at a time.
Kenwood Had the FTV 520 for use with the TS520 and the TS 820
Down East Microwave still sells Hi performance Transvertors for 2m 6m
220mhz 1296 (maybe 2.4 gigs too I don't recall).
Traditionally most transvertors had an IF of 28mhz for use with most
HF rigs. Ten Tec produces a 6m unit with IF at 20meters or 2 meter band.
The reports have been most favorable. I bought the 2meter IF vewrsion over
a year ago and havn't put it together yet. Be aware too that there is no
"bypass switch provided with the 2meter IF version (unless there has been
a design change since I bought mine). Minor inconvience. The 20 meter has
a bypass for the input/out putline.

Want a KDK-2015/6 or Icom-22A or something like that.
Basically looking to pay well under $100 for an old beat up
2mtr no frills no memories, synthesized 10watt or more rig.
Doing packet, of course, don't need much for that.

If you have something please email

tim@new-era.com

4593. Yaesu FT-530 and CTCSS squelch

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-28 00:00:00 UTC
From: mconner@neonramp.com
Message-ID: <338bc5aa.13660452@news.neonramp.com>
Source record: 174432

I was wondering if there was a mod or other cure for the CTCSS squelch problem I have on my Yaesu FT-530. When I use the CTCSS squelch to filter out "normal" traffic, I find that the squelch breaks for a short time during normal speech on the repeater. Is this common for other rigs, or is it more prevalent on the 530? Is there a cure for it short of buying another HT?

The reason this is so annoying is that our area will soon go to CTCSS encoding on the repeater output during severe weather and I'd like to use the 530 to monitor for this but not wake me up when someone with just the right tone of voice causes the squelch to break.

4594. Re: ? about my Icom IC-751A

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-28 00:00:00 UTC
From: kd2a@traknet.com
Message-ID: <338b767d.3874083@news.emi.com>
Source record: 174433

Ihad a similar problem with my 751A except 80 and 40 sounded bad, 20 through 10 were ok. I believe the problem was in the PLL circuit and was caused by several lifted, cracked or otherwise cold solder connections on various chip caps. The Icom repair person told me this was a typical IC-751 failure. Sure sounds like it! Icom out sources repairs on older units and it takes about eight week. Not inexpensive but my radio works fine now.

Put a 100K resistor across EACH diode when doing this to equalize the
reverse
voltage when the diodes are not conducting. Use 1 Watt carbon comp
resistors
for high breakdown voltage.

4596. FS: FT-911 HT

I have a Yeasu FT-911 1.2gig ht for sale. I took this unit in as part trade on some computer work I had done. The amateur operator that owned it, hadn't used it in about 2yrs. Needless to say, the radio is in almost brand new condition.

There isn't any 1.2 gig activity here in Las Vegas, so I'd like to sell it and put towards another rig, possibly an allmode 6meter.

I has all the docs, charger, battery, ant. If you know this radio, it's a pretty nice one. Keypad, encode/decode built in. All that good stuff.

I'm asking $350 obo and I'll pay shipping.

My friend has a DJ-580T dual band ht. For some reason the UHF side has lost it's transmit. It will receive.
The VHF side works on both TX and RX. If someone wants to try their hand at finding out what the problem is with this, they can have it for a song.

He's asking $150 obo for it. It's no good to him the way it is. He wants to put the money towards another dual band.

Let's see if we can help him. Thanks.

From: mmcoop@smtp.net-link.net
Message-ID: <5mg3j0$ds2@leol.net-link.net>
Source record: 174441

I've got an older Kenwood 2600A handy talkie. The little charger that originally came with the radio doesn't seem to be charging the batteries properly. The PB-26 batteries charge only to about 5 volts. Does this sound like a bad charger? (Note: I have refurbished one of the battery packs so if the charger was working I would get a normal charge.)

Does anyone know of a charger that will work with a PB-26? Kenwood used to make two "ST-2" and "MS-1".

I have had a few of the AL-80s over the years and they worked
very well. Suggest they be run on 220 volts and now days, the
solid state radios may not be a "plug-n-play" with the PTT
relays in the amps. So give some thought to that.

Another issue is that there are used AL-80s kicking around - typically
at pretty good prices - about half of current list. So keep a sharp
eye and maybe save a few bucks.

There is an informal group of amateur radio operators that use Macintosh computers called "Macnet" with > 800 members world-wide.

We stay in touch with each other via packet & Internet and we have a HyperCard stack that tells the story of each of us called "Macnet Roster" that list

o CALL SIGN @ HOME PBBS
o FULL NAME
o Street ADDRESS
o CITY, STATE, ZIP
o INTERNET ADDRESS
o MACS USED
o RADIOS USED
o SOFTWARE USED
o PASSIONS
o COMMENTS

Macnet members can then communicate with one another directly or use our Macnet Moderated Mailing List to pose comments or questions to all of us on the Net.

To join Macnet, put YOUR INFO (via EMAIL or via disk using TEACH TEXT on a formatted disk in a self addressed and stamped disk mailer that is in a large envelope clearly marked "ROSTER").

Or connect to our home page via the WWW http://www.mv.com/ipusers/wd1v

-------<sent to all new Macnet Subscribers & Macnet Roster Updates>---------

Welcome to Macnet!

A trip to my home page also reveals there are many superb files and programs for amateur radio operators that want to use Mac computers. See more details in January 1997 QST, page 100. http://www.mv.com/ipusers/wd1v/

* Ham Radio Test Simulators - where you can go from Novice to Extra Class practicing the actual tests right on your Mac! Check out the info on the new NO CODE license or scramble your neurons and learn Morse on the Mac too!

* Macnet Email Reflector - send an Email to all Macnet users on the Internet.

* Macnet Roster - a virtual "Who's Who" HyperCard stack with > 800 entries giving the names, addresses, phone numbers, of radio operators all over the world that are using Macs. Check out their projects and

their passions and put a design on your Mac Radio future. See what neat things are being done with Macs and Ham Radio!

* Mac Ham Radio Software Listing - as the name implies, its "The List" of the latest - much of it with FTP links so what you see is what you can get your new programs with just a click.

* Ham Radio.FAQ - compiled on a Mac with a lots of links to great Mac FTP sites for radio, electronic engineering, and similar data.

I have dealt with the Woodbridge,VA HRO for about 7 years now (nearly all of that as an Extra class ham) & spent thousands of $$$$'s there. I can say that they r very kind & helpful. But they r just people.
I try to be understanding of closing times,etc. Usually if a customer treats them w/respect, they really try hard. Nevertheless, I have heard a few dainbramaged cases needlesly hassling the employees. There is a difference in asking info & being a jerk-I know, I've worked in retail for years. I know what BOTH sides of the counter r like. Many people cannot say that.
Many times,either on the phone or in person, they (HRO,VA) have taken time to answer MANY questions as honestly as they can. For example. I
went to HRO one saturday AM (a 4 hour drive 4 me) & was all set to buy one dualbander (I believe an icom) & wound up buying a kenwood. Why?
The salesman was very familier from his own experience with the kenwood & , after hearing of my specific interests for the rig, nailed it down to that rig. I have been VERY happy with that purchase! Anyway, it wasn't on sale, nor were they pushing that rig. I have been very happy with the service. Just remember that HRO (or AES,EEB) is NOT burger king! Ham gear is VERY complex & often times hard for ANYONE to answer some questions!
BTW, I have been talked out of unnecessary purchases more than once!
Just my 2 cents worth....N4ZGT

> 73...de VE3TIZ

I purchased a new Cherokee AH-50 6 meter handheld at the Dayton Hamvention for $250. The Cherokee importer had a booth there and they had "seeded the market" with a few radios that were being sold by dealers.

I believe AES carries the C.B. line and the importer is at "www.wirelessmarketing.com".

The radio comes in a nice small handheld package. The radio has a very solid feel and seems well constructed. The plastic seems to be C.B. grade but with care, should last just fine.

The antenna is only about 6" tall, a very be compromise on 6 meters but it seems to work very well for its size. (I just had a QSO through a 6 meter repeater 30 miles away and was heard just fine.)

The unit lacks a DTMF pad and only has 5 memory channels. It comes with a nicad battery and overnight charger. It has full CTCSS encode and decode and they may be set independently.

The radio is very easy to use. Frequency selection requires a few keystrokes (no rotary knob).

Now for the important part, R.F. performance!...

The receiver is excellent. I have used it mountaintopping, on a groundplane on a 50' tower, and in downtown environments. We have a TV Channel 2 in the Bay Area. I have never heard any undesired stations. The receive audio is very good. I wish the receiver would receive outside of the 50-54 MHz amateur band.

The transmitter is rated a 5 watts high power (I don't recall the low power mode). The audio reports I received have been favorable. The BNC antenna connector got pretty hot after 10 minutes of rag-chewing and further inspection showed that the radio has a heat sink inside that is bonded to the BNC connector. This seems like a good idea for cooling.

It is important to remember the limitations of a 6 meter handheld. You must either be near a repeater, or in unobstructed simplex range.

Would I recommend this radio? Absolutely yes! It seems like a real good value if you can find a discounted price. I've had a lot of fun with this radio.

I'm glad to see more interest on the part of hams and manufacturers in the 6 meter band.

>

I didn't want to do it that way, as i want to tune thru a band of
frequencies
and keep the offset (To find a repeater). If I use the split box the TX
freq stays as it was. The splits are still u/u, v/v.

Cheers
Sean

Got mine yesterday and apart from not knowing how to find my way through the menu options yet, I love it already, though 2m repeater operation seems a little complicated. That could just be me not used to pushing the correct buttons yet.

TX audio has been given very good reports and I had my first QSo's yesterday into France and this morning into Southern Italy, both on 50MHZ . Can't comment on CW or HF.

> Pedro Bastos

You can open your reception without having to open the radio or cut anything. Hold PTT + VFO and, while holding these keys, press POWER. Your radio is now receiving 118-136(as before), 136-174 and 400-520. I have tested it in a TH-28E and I don't know if it works with TH-28A.

Before making dedicated VHF/UHF all mode radios, YAESU had RX-TX
transceivers for FT-77 and FT-707. Maybe you can get one of these but
I can tell you it's difficult. They put up to 25 watt in 70cm, I
think.

I just bought the AL-811 and have used it for a week. I can say that it does what it is advertised to do. It loads up well and it gets out well. It doesn't run screaming hot where you could boil water on top of it. I don't know what else to say except that it does what it is supposed to.

I have never run a linear before this, therefore I am not a source of knowledge for comparisons.

Well Greg, I drive from state to state a lot and very seldom hear anyone on the 146.520 calling freq. I monitor it all the time and call out about every 50 miles or so but seldom make a contact. Sometimes its a long way between repeaters. On the other hand the CB channel 19 is always active with weather, road, and bear conditions. Also those truckers can tell some very good stories. True, there is a lot of trash in there, but sometimes you can find a real jewel amid it all. Radio is Radio regardless of frequency.

Hey! I have a GREAT idea! How about we make it a law that every radio, in
order
to be allowed on the airwaves, accept a "smart card" which every ham is
given which
allows transmitting priviledges in accordance with the license! And the
radio then
transmits a data burst with the license info! These radios could of course
be remotely
de-activated, and could even have GPS in them so the gov't knows EXACTLY
where
all of us are!

Just kidding, but I'll bet a lot of people would go for this...

They seem to work, although on HF you won't notice if the impedance was
askew.

They are like the PL-259 (UHF) connectors, but that bothers me because of
the
high heat needed to solder the braid to the shell. I worry about melting
the
dielectric and making the center conductor off-center.

Try a U.S. Roboitcs 33.6 WinModem part number 1125 at Sams for $90.00 but
make sure that you send in the U.S. Robotics Fast $40.00 rebate. Thats
only
$50.00 and its upgradeable to 56.6k.

Bond everything with heavy braid. Engine to frame, engine to firewall, firewall to hood (two places) and in some cases, exhaust pipe to frame. Dress the wiring close to the engine - use wire clips if necessary.

I had a '66 Ford that I built a totally shielded ignition system for using RG-8 braid over the plug wires, a coffee tin around the distributer cap and tall 9 pin tube shields over each plug. Worked great, but it was hell to maintain.

I am looking for a source for rubber feet for a radio. I am not interested in the stick on rubber feet or the one's that you screw on with sheet metal screws.

The type I am looking for are the type that you push up through a hole in the bottom of the radio and it pops into place. I believe Heathkit used this type on feet in some of it's older radios.

I checked Radio Shack and couldn't find any of this type. It's basically like a rubber plug.

4650. Re: Help***Icom IC-T7A serial pin config for comp interface????

>seanr@cts.com
You forgot the ten componets in the DB-9 that make up the level
converter in the ICOM cable. The radio requires 5 volts not the plus
and minus 12 volts a serial port will give to the radio. Hooking up
the T7A direct to a serial port will destroy the radio.

Source record: 174248

I've purchased the HT and I agree with the previous comments and like
to add a few myself. First!! I only paid 199 for mine at AES in
Milwalkee on May 4th, maybe it had something to do with the AES Superfest.
I also purchased the soft case to protect the "CB" plastic and it covers
the HT very nicely although it is a tight fit. Keypad entry would be nice
but the function key works well and QSYing is an easy task. Reciever
sensitivity is good but alas there are no repeaters where I live.
A friend of mine has the ADI AT-400 and the battery works on the
Cherokee six meter, but my battery does not fit his very well. I've seen
the AH-27 by Cherokee and it looks identical but it is for the CB band.
From the different WEB sites I have visited I have found out that the AH-
27 is very modifiable and it would seem that the the AH-50 would do the
same.
On an outside antenna I can easily work out to 15 miles on simplex and
since the band is geting better I fully expect the rig to reach out from
my favorite recliner. I have worked about five miles with the ducky
antenna.
Rumor mill has a Cherokee all mode ten meter in the works, I know they
have a 11 meter version. So this company for being a "CB" company I think
they have a winner here. and I hope they are working on more.

: else.

I have both a Schurr Profi and Bencher. I now only use the Schurr paddle and love it. It's heavier than the Bencher and I find the paddles are at a better height for me! As for the "feel", well I think it's "harder" than the Bencher but that's the way I like it!

I would advise trying one before purchase as they are expensive. I bought mine at HRO Sunnyvale so I'm sure that other HROs must stock them.

>>Walker N5KZZ

For comparison purposes, I have an L4B, 30L1, HT33B, Alpha 89, and an Ameritron AL82. I like the AL82 and believe it is the best buy in an Ameriton amp. It uses the same power supply as the AL1200 and AL1500, but more available and less expensive 3-500's.

I once had an AL80A and that was a good amp as well.

Just soldered up some a week ago. No problem at all to solder the
braid to the shell. The N's I had were not plated with a shiny
material, just a dull-looking shell. What I did, before soldering
the connector on, was to tin the connector body before putting it on
the cable. The connector took the solder quite readily. BTW, I
use a Weller soldering station with a wide, 700 deg.F tip for this.
If the ones you have have a shiny coating/plating, file that off,
apply flux, and tin the connector body before putting it on the cable.
When it was time to solder the center conductor/pin, I changed to a
narrow 700 deg.F tip. This is really the hard part, as the only
place to put solder is in the little inspection hole in the pin. If
you tin the center conductor before putting the shell on, test fit
first; it may not work with tinned 9913.
Good luck.

> the shell without sever damage.
>
> Does anyone know how to open the FNB-25 battery pack without destroying
> it?
>
> Any advice appreciated.

We opened many FT530 battery packs by squeezing the sides in a vise until the joints crack. Then we remove the arrow sticker on the top and force it open from the top. Use moderate force and work slowly since the batteries are glued inside the case and hold the cover halves together. The glue will yeld slowly. If you work from the bottom, You will break two plastic tabs that hold the halves together.

If you work delicately, The case will snap together and a piece of tape on top will help hold them while not in the radio.

I would like to get some info on the Johnson Courier. How many watts out, finals, AM only, years of manufacture, etc.? Also what would be a fair price to pay for one of these amps.
Thank you very much for your help.
Skip Tyson KE6YRZ

4673. Off Topic: Scanner Modification

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-29 00:00:00 UTC
From: "Kent R. Frazier" <kfrazier@nmsu.edu>
Message-ID: <338DA486.4C644F40@nmsu.edu>
Source record: 174266

I know this is off topic, but I thought this group might be able to answer my question.

Is it possible to modify a Radio Shack Pro-33 scanner to receive between 174 MHz and 380 MHz? What are the legal issues, if any? My interest is in receiving the Military Aircraft bands in this range along with the Ham band.

Thanks,

Kent

Source record: 174268

Kenwood TS-50, New price @ AES=$1019 -- Asking $750
Kenwood AT-50 Antenna tuner, New Price @ AES=$329 -- Asking $245
Kenwood YK107C CW Filter, New price=$129 -- Asking $90

All in excellent condition, no scratches or marks. Original boxes and manuals. Purchased new 3/94. The AT-50 was used only about 30 minutes, I ended up using an SGC tuner instead, because of the type of antenna. It has
served me well, but I no longer need a small radio. I have upgraded to a TS-850.
I'll pay COD shipping.

Title: Info abt PHILIPS IC's???

[��� TST HOST v1.42b, Local time: Thu May 29 16:29:12 1997 ���]

Hello all.

I'm looking for the features and pins map of this IC's:

1�) TDD1742T (PHILIPS)

2�) N82S185N (SIGNETICS) PROM. (It's an usual 18 pin's IC)

This last IC is the PROM that programs the frecuencies of the TX/RX
channels in a comercial transceiver.

I want to modify the PROM info to transmit in 2mts amateur band.

If you know something about this please tell me it.

I acknowledge it avant.

Thank's.

I need to be able to reprogram this unit, as I frequently travel
from one area of the state to another. The only shop that I have found
that is capable of reprograming this unit is in yet a third part of
the state which I have visited once in my life (when I got the radio).
If anyone can help me, please e-mail me at the address below. I have
no idea what model the radio is as the label has fallen off. All I
know is that I got it about 7 years ago. Please help!
I will gladly buy both the required programming cable and software.

Thanks,
Keith Hammond

4682. ICOM IC-V68 FEATURES????

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-29 00:00:00 UTC
From: millerk@xtrabox.com
Message-ID: <864931207.29527@dejanews.com>
Source record: 174325
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I recently purchased an ICOM IC-V68 transceiver.
The book that came with the radio is VERY basic
and does not describe how to use any features
such as the memory or channels. The person who
sold me the radio showed me these features, but I
am thinking that I must be missing OTHER features.

Are these documented anywhere, possibly on-line
where they could simply be downloaded?

Please e-mail me any replies at: millerk@xtrabox.com or
millerk@xtrabox.com

Thank you in advance!!!!

More power on 2 meters (20 watts now) and a quieter fan (yippee)
But still has the ridiculous repeater offset problem.. You have to turn
the thing off and go into setup mode to change your direction of shift.
I heard another fellow here describe it as brain dead - I'd have to say
that was hitting the nail on the head. Anybody know a way around this?

Is there a preferred manufacturer for carbon comps that handle high
voltages? The Allen-Bradley RC32 style 1 watt resistors are only
rated at 500 volts, according to the latest Newark Catalog.

Well I sell them for $229.00 at this time. Nice little unit, accepts the MA-27 mobile comm adapter, plus most of the other options. The case is Lexan Plactic and tuff enough to withstand most anything. This company is going to have many more CB and Amateur products over the next year.

John J. Thornton (jjt@gte.net) wrote:
: John Stefani wrote:
: >

: > dealer sells them for $399 CDN (full list). Any comments on this rig?
: > I'm a bit worried about buying a ham radio from a company that is
: > predominantly a C.B. manufacturer, but hey...
: >
: > 73...de VE3TIZ

: I purchased a new Cherokee AH-50 6 meter handheld at the Dayton
: Hamvention for $250. The Cherokee importer had a booth there and they
: had "seeded the market" with a few radios that were being sold by
: dealers.

: I believe AES carries the C.B. line and the importer is at
: "www.wirelessmarketing.com".

: The radio comes in a nice small handheld package. The radio has a very
: solid feel and seems well constructed. The plastic seems to be C.B.
: grade but with care, should last just fine.

: The antenna is only about 6" tall, a very be compromise on 6 meters but
: it seems to work very well for its size. (I just had a QSO through a 6
: meter repeater 30 miles away and was heard just fine.)

: The unit lacks a DTMF pad and only has 5 memory channels. It comes with
: a nicad battery and overnight charger. It has full CTCSS encode and
: decode and they may be set independently.

: The radio is very easy to use. Frequency selection requires a few
: keystrokes (no rotary knob).

: Now for the important part, R.F. performance!...

: The receiver is excellent. I have used it mountaintopping, on a
: groundplane on a 50' tower, and in downtown environments. We have a TV
: Channel 2 in the Bay Area. I have never heard any undesired stations.
: The receive audio is very good. I wish the receiver would receive
: outside of the 50-54 MHz amateur band.

: The transmitter is rated a 5 watts high power (I don't recall the low
: power mode). The audio reports I received have been favorable. The BNC
: antenna connector got pretty hot after 10 minutes of rag-chewing and
: further inspection showed that the radio has a heat sink inside that is
: bonded to the BNC connector. This seems like a good idea for cooling.

: It is important to remember the limitations of a 6 meter handheld. You
: must either be near a repeater, or in unobstructed simplex range.

: Would I recommend this radio? Absolutely yes! It seems like a real
: good value if you can find a discounted price. I've had a lot of fun
: with this radio.

: I'm glad to see more interest on the part of hams and manufacturers in
: the 6 meter band.

There is a guy here in California who built a solution using a PIC
processor. I bought one but haven't installed it yet. It uses the computer
port to do its thing.

Fits inside of the 706, don't know is the space is available in the Mk II.

I`ll probably see him this weekend. With shipping $35-$40.

4701. Re: New 2 piece N connectors.. any good?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-29 00:00:00 UTC
From: Rick Pemble <pemble@ix.netcom.com>
Message-ID: <01bc6c86$c6797f80$38d1bbcd@pemble.ix.netcom.com>
Source record: 174344

The 2 piece N connector relies on a soldered connection to the braided shield just like the PL-259. I have two problems with that. 1) to heat the back shell to the temps needed to effectively solder the braid, it is almost inevitable to melt the dialectric. 2) the mechanical connection of the classical N used the torque of the backshell to hold the connector and the co-ax together. with the two piece, the solder joints constitute the only mechanical hold. and it isn't much!

I have used several 2 piece connectors recently because it was all I could get. They work -- but I heavily taped the backshell to the coax to keep the connector from twisting free.

The old design worked, and was good -- the new one is cheaper to manufacture.

cheers

4710. New Yaesu FT-920 vs Good Ol' FT-990

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-29 00:00:00 UTC
From: WmLB@prefer.net
Message-ID: <338E1E50.71BA@prefer.net>
Source record: 174353

I suspect it may be a little premature to be asking this question , but has anymore recently acquired a new FT-920? Or had some "hands on" experience with one Would appreciate getting your initial comments on this rig. I am "Yaesu" person who is wondering if this might be a viable replacement for my good ol' FT-990..(now officially discontinued except for existing inventories I guess)

Just off the top.. it looks like I would gain some pretty good DSP capabilities but lose a internal power supply which the 920 does not have. HRO actually selling the 920 for less then what I paid for the 990 back in about 91 or so...

Any comments would be appreciated

Bill, KN6FJ

Olsen, I cannot comment about the other antennas, but the Icom marine antenna/MN-100 is built like a tank. The dipole elements are stainless steel, as are the eyebolts that come out of the cast aluminum center box. The center box is heavy, and is meant to be bolted to a mast with stainless steel "U" bolts provided.
The drawback is that the center "load" is a resistor, i.e., a dummy load antenna. But it really does load on ALL HF frequencies. Manufacturers stated gain is -6db, but if you are on a boat surrounded by salt water, thats not such a problem.

Hi,

Is there somebody who has the pin assignments of plug 14 of this old (at least more than 10 years) R&S receiver. The plug is normally attached to the power-supply, which I'm missing, and has two rows of pins (labeled 1-8A & B). Any description on what comes out and goes in would be great. This would help me in building my own power-supply.

73s, ON1DJU

4723. Re: Kenwood V7A Problems!!!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: Paul Nicolay <paul_nicolay@merck.com>
Message-ID: <01bc6cc6$6560d320$6e036536@merck.com>
Source record: 174124

Following modifications are possible:

1. Wide band reception (Conversion A) - K destinations outside 800Mhz band support
2. Cross band repeater (Conversion A and B) - Completed with K destination measures
3. Page answer back (Conversion A and B) - Completed with K destination measures
4. DTMF remote - Operates even without conversion, but some items function when Conversion A and B are made.

Conversion location:
Remove the power cord from the main unit, remove the upper/lower case, flip down the panel, then operate.

Factory setting destination jumper table
Bit Destination (K, M, E)
3 R542 (W501) O X O
2 R543 (W502) O X O
1 R544 O X X
0 R546 O X O

(O: Jumper, X: No jumper)

Conversion A - Reception wide band (already dealt with for M destinations)
E destinations - Eliminates mounted chip jumper resistor R546 (0 Ohm)
K destinations - Cuts the mounted jumper wire (W501)
Conversion B - Repeater/answer back (Already dealt with for K destinations)
Chip jumper resistor 0 Ohm added (R92-0670-05) - The chip removed in Conversion A can be used in Conversion B. When adding or eliminating the chip jumper resistor, be careful not to peel off any of the printed cicuit pattern and not to harm any other parts.

ALL THESE MODIFICATIONS ARE THE RESPONSABILITY OF THE OWNER !

Theoretically, a 400 amp-hour battery should last 800 hours at that rate.
.437 amps is pretty large amount of current for a receiver to draw
just the same. It should not pull more than .1 amp.

Check your alternator. You should measure 13.8 volts across
the battery while engine is running (close to this anyway).

If you have a lame alternator, that could explain it.

Thanks to our wonderful (!) government, I think the taxes alone are more than
$5/can.

I had this problem last fall with my mobile 757. Disassembly proved complica-
ted, so I settled for some teflon lube dripped on the shaft and a little heat
and a little vice-grip turning once in a while. I had the rig face up and
repeated the process for about a week until the lube fully penetrated and made
the tuning smooth as butter, better than new. Time solves many things. K9ZAT.

Split mode would work fine if all repeaters shifted in one direction
-- they don't. Split mode just offsets by the setting you choose in the
initial setup mode. (power on and lock together) As far as I know you
have to change it (the offset) there -- unless you know something I
don't.. (which is possible)

the battery probably is not a 400 AH 12VDC battery. Might be 400 cold cranking amps. (sales lingo). I would guess that most car batteries (guess) have about 30 to 50 AH rating at a 1 amp discharge rate. This means you should be able to run a 1 amp load for 30 to 50 hours. Higher load rate for a shorter time. Example 30 amp load will not run for 1 hour.

Now your problem. Turn off your loads. See if the battery still goes down over night. The battery could be bad. The altenator could have a diode that is leaky. This would discharge the battery when the car was not running. See if there is current being drawn from the battery that cant be explained.

Drop me an e mail if this sounds all fishy.

> don't.. (which is possible)

Actually, it's pretty easy to do... though I can never remember the
procedure when I want to! I'll try to remember it, and check it when I
next get the chance (& repost if necessary):

1) The off-set is the default 600KHz.
2) Go to VFO mode, and select VFO B.
3) Dial in the *Transmit* frequency.
4) Press and hold the Split key (until you hear beep-beep and
see "Split" on the LCD).
5) Switch to VFO A.
6) Put the settings in the memory.

It sounds like more work than it is. All you're really doing is dialling
the frequency in the "other" VFO and putting the TX frequency there
instead of the Rx frequency. Works like a charm.

Like I said, I keep forgetting the exact procedure, but what I have
outlined above is pretty close and I'll repost if it's incorrect.

Source record: 174136

Greetings all Kenwood TH-75A owners and experts,

I recently aquired a used Kenwood TH-75A and would like to ask a
few
questions about it. From looking at the schematic, I was curious what
D2, D3, and D4 do exactly to the operation to the radio.
I would like to modify this handheld to transmit up at 470 to
480 MHz.
Is this possible ??? Have any of you documented what each of these
diodes does ??? I used to own one and used it in the 450 to 460 MHz
band for commercial 2-way transmissions at the 2-way radio shop I used
to work for. I know that I had to "tweek" the UHF VCO.
Also, I would be interested in purchasing the service manual for
this
radio. Does Kenwood still sell service manuals ??? Any one have one
they would like to sell ???
Thanks for any and all info. You can email me directly at:
mgladu@warwick.net

As a retired auto mechanic [18 years] and now elect.engr., I find the fact that a 525CCA battery is being used in a '96 vehicle rather suspicious. As I look at a battery replacement guide, I see replacment batteries listed with ratings from 650 to 1100 CCA. I have personally put a 1000 CCA battery in my '79 Olds with a 455 cid engine that use the diesel starter left over from the orig. motor. Orig. setup was two [2] 525 CCA Delco Freedom batteries for the diesel setup. I would check the alt. output voltage [as another person suggested] with a digital meter.At 2000 rpm , the voltage with a charged battery and accessories off should be a minimum of 13.8 and a maximum of 14.8 volts. The alternator is probably rated at 80-94 amperes max. output. If you can put a shunt inline with the negative battery cable, you can get the real lowdown on where all your electrons are going. Seems to me, a trunk light draws about 200 ma. And I have left lights like that on for more than overnight with no low battery conditions. The best test, however, would be to put a shunt rated at 100-200 amps at the alternator output [hot lead] and see how many amps are being pumped back into the battery after you find the vehicle unable to start on its own. With a known goo battery found accidently run down, after jumo starting, the initial current out of the alternator will 55-70 amps, and the charging rate will taper off fairly quickly [5-7 min] to about 15-20 amps. then the rate will drop much more slowly as the battery approaches full charge. the output current must drop almost to zero or the battery probably has a bad cell, new battery or not. Cranking the motor for 30 seconds on a charged battery must display a minumum of 10.5 volts at the battery or their is something wrong.

Hope that helps....nothin' worse than bein' stuck when you gotta go

A good battery should be in the range of 50 amp-hours. At .4 amps,
the battery should last about 100 hours. Where did you measure
the current? At the radio or at the battery? If you measured
it at the radio, check the current draw at the battery. If it
is significantly different, pull fuses to find what is drawing
power.

To see if it is your charging circuit or your battery,
you can measure the charging voltage and current, or you
can put the battery on a AC powered charger and see if
the battery goes dead again after a full charge from
an external charger.

> KA0DXM
no, .42 amp should run for days on a GOOD battery. I'd suspect your
battery capacity is low (buy a new one) or check when radio is off is
there still a substantial current draw easiest way is to disconnect
your
battery, put a 2 ohm resistor in the line and measure voltage accross
the resistor then use ohms law. If there is, check why, i've seen glove
compartment and trunk lights, and even under the hood lights stay on.

small drain, but it hurts bad because they're aways on.

4752. WWW Message Board Experiment

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>

WWW Message Board Experiment

Folks,

May I engage your services for an experiment...

As you know, I set up a "Personal Web Server" on my
home computer running Win95. Previously, the server
had only a copy of my web page...

But, now...

I have taken the mirror of my home page off and installed
an automated message/discussion group faility called aptly
"Short Circuits"...

Please go to my home page http://www.qsl.net/k7on and click
on the rotating arrow and while I'm connected you'll be then
connected to my personal server where you can access the messages
entered by you and others.

It is threaded and resembles a Usenet newsgroup, but will not
be spammed as it is not connected to the Internet by a static
IP address...(this is part of the experiment, BTW...)

Please give it a shot!

I'll be watching for messages on there and I've put 2 already myself.

73, Brian http://www.qsl.net/k7on

4753. IC 706 Repeater Offsets (+/-) "How To"

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: Julian Frost <jfrost@odaiko.ss.uci.edu>
Message-ID: <Pine.LNX.3.95.970530191720.10986A-100000@odaiko.ss.uci.edu>
Source record: 174154

Refering to programming positive offsets on the ICOM 706, I wrote...

> Actually, it's pretty easy to do... though I can never remember the
> procedure when I want to!

Here is the procedure for programming both Positive and Negative offsets
on the IC-706:

Both cases assume that the default 600KHz offset is set, that Quick
Split mode is enabled in setup (the default), and that you are currently
in VFO mode...

Negative Offsets
================
1) Dial the *RECEIVE* frequency into VFO A.
2) Press and hold the SPL (Split) button for 1 second (until you hear
the double-beep).
3) Set PL.
4) Press and hold MW (Memory Write) to put it in a memory.

Positive Offsets
================
1) Dial the *TRANSMIT* frequency into VFO A (that is, the RX
frequency + 600KHz).
2) Press and hold the SPL (Split) button for 1 second (until you hear
the double-beep).
3) Switch to VFO B
4) Set PL.
5) Press and hold MW (Memory Write) to put it in a memory.

As you can see, it's VERY easy to do. You don't need to mess around
changing the start-up options (which involve turning the 706 off, then on
again, then off, then on again!). Programming a positive repeater offset
requires exactly one key-press more than programming a negative repeater
offset.

Julian

Auto batteries hate to be deep discharged. If during the alternator problem your battery got really flat a few times, or has gotten really flat few times since, your battery is probably shot.

Try charging the battery up fully (nice long road trip), and measure the voltage across the battery with a voltmeter as soon as you park it, engine off, headlights on. Then immediately disconnect one of the cables (losing all the presets on your car radio, but then you've been dealing with that all ready, I guess). Come back the next morning, reconnect the cable and before you start the engine again measure the battery voltage with the headlights on. I think you'll find the battery voltage much lower. The battery will have self discharged over night.

When battery discharges, its plates shed lead (which is later redeposited during charge). Sometimes when the battery is deeply discharged, the plates warp from their own weight, or some of the shed lead wedges across the bottom of alternate plates causing an internal short which discharges the battery when it is just sitting there.

Hope this helps

Gray

4756. Value of FT-990AT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: WmLB@prefer.net
Message-ID: <338F0892.77AF@prefer.net>
Source record: 174157

I am thinking about buying the new FT-920 and selling my FT-990.. (Yeh, I know it may not be totally the best of decisions.)

Anyways.. I need to try to figure out what a reasonable value is for the 990 now..

Bought it in 1991
Internal Power Supply (AC)
All Filters (250hz, 500hz, 2.0K and 2.4K)
Clean Unit, (nobody smokes here)
No problems I am aware of. I use it for SSB and digital for the most part (not into CW)
Don't have the original containers anymore,; the manual is a bit dog eared and crunched, (but it's all there)... do have the original hand mike and will consider throwing in the SP-6 speaker and a YS-60 (I think) headset.

So whatdaya think a reasonable asking price might be?

I, too, had downloaded their GUI and played with it for a while. The initial feeling of the software to me is acceptable.

This new concept really requires a 2 part evaluation: Software and Hardware.

As a software engineer, I believe that the GUI is a very subjective thing to talk about. Programmers write codes according to their understanding of __HOW__ the machine works as well as the underlying object oriented anatomy. On the other hand, users want some totally different things such as the classy look and such. Without investing more ergonomic features to a software means that the program is hard to use (or sell).

The good thing is that new features can be added in the future, if the radio itself is designed to accomodate that down the road.

It is still has yet real talks about the performance of the TX/RX/Digital mode/SSB/DSP/etc. These are some different issues.

I wonder if the radio is immune to my HP Vectra VL 5/166 desktop computer. It is a FCC Class A certified equipment.

This is a daring concept because almost all of us are so used to knobs and buttons, plus $2K is a heavy investment for many people. IMHO, unless the tranceiver and the software really shine, the market will need a _L_O_N_G_ time to sbsorb this idea. I believe this is a good place to start, though.

My suggestion to Kachina is to work hard on making a good solid radio and write a good function library, as well as to keep the design open and modular. Sell the radio along with the function library for garage programmers/HAMs to make the baby really shine. For example, Nothern Telecom made its key switch system for small companies around the world. They also release firmware upgrade and development tool kits. All of a suddent, a tradional phone switch has added powerful features like Automatic Call Distribution, Call Accounting, and etc.

Just think of the potential of a computer controlled radio both inside and outside of the ham bands. For recreational purpose, how about a computerized remote controlled airplane to fly patterns? Wouldn't that be fun?

Much like Microsoft, they developed the operating systems and allow others to access to its core service with their tools, while Intel to make the chip set. Look how successful PC's are today!

I got flamed last time when I talked about modular implementation on ham gears. I can care less about that! We are on the internet! I don't understand why there are people who can never took constructive ideas that are different from theirs.

So much for now. I know that there are fans out there. You don't have to flame me.

Best 73!

From: Greg Knepp <Greg_Knepp@amdahl.com>
Message-ID: <338F564F.7F5B@amdahl.com>
Source record: 174163

I'm a new ham looking for info on cloning an IC-T2A. I think the radio is cloned via a very simple 2 wire cable I could make myself. I further think the cloning is accomplished by entering a special "mode" by pressing a special key combination while turning on the radio.

Anyone out there know the secret, or a specific ICOM news group I could try?

Thanks,
Greg

>Skip Tyson KE6YRZ

THOSE amps were made in the 50s and 60s, were good for about 500 watts SSB, PEP, and about 100 watts max on AM. A "FAIR" price is difficult, depending on condition - many of those amps were kit-built, and construction abilities varied greatly. But a really good one might be worth about $150 or so. By the way, they had NO input impedance matching circuit, so modern solid state rigs might have a problem driving one, and these amps also lacked internal antenna switching, so some external system must be provided for current rigs.

4778. Re: Arcron Radio Controlled Clock Review

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: n4xy@bellsouth.net
Message-ID: <338e6412.11260762@news.atl.bellsouth.net>
Source record: 174187

Hi Bob... ONE of us-maybe both-has a bad unit... I have both clocks as well... MY Mega will ONLY work well in upstairs (e.g. above ground) windows, nowhere in the interior of the house w/o a lot of missed days... whereas, my Zeit ARCRON has percolated along from day 1 on my operating desk in my basement, 3 feet below ground, 6 or 8 feet from the nearest window. I use SWATCH via the Internet for my time anyway, but I'd REALLY like to improve the MEGA since I LIKE that anachronistic sweep second hand A LOT!!! I have considered surgery and an external (to the clock-NOT the basement) loop ant and preamp... but you make me wonder if they have a US repair center, since it could very well be flawed in the front end.

By the way, I DID get my Atomic Standard: An EFRATOM Miniature FRS Rhubidium Atomic Frequency Standard set for 10 MHz and, to keep it calibrated, a REAL WWVB Receiver: a TRACOR 900B with chart recorder. Short term on the FRS is 5x12... and it takes 3 days for to set it properly using the Tracor and charting. The FRS was RFE and the Tracor LOOKS new. Does need some setting up, and wiring and such, and a shielded loop and preamp seems about the best idea overall for input. I did get a Stabiline for a power source, and have a chunky AT&T battery backup I THINK will be OK when I replace the batteries.

Please pardon the BW guys... I should have used a personal email but got carried away... it DOES apply to WWVB stuff. Thanks.

4779. Spurious 2m emissions from the MFJ 484B DSP

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: John Charles <jaycee@midmarsh.demon.co.uk>
Message-ID: <Qx59FEAosqjzEwM7@midmarsh.demon.co.uk>
Source record: 174188

I have used my MFJ 484B tunable DSP to good effect on HF but recently
I've been using it on the SSB section of 2m and finding a lot of
spurious signals emitted by the filter.

Have others users noticed this - is it a 'feature' of the MFJ - can they
be suppressed?

I've tried running it from a 12v battery in case they were getting back
through the PSU but that made no difference, nor did connecting the case
to my RF earth. These emissions are still picked up when the DSP is
disconnected from the Rx. Physical distance between the units is about
18in. They are not strong enough to register on the S meter - just
annoying when tuning through the band to find weak continental
transmissions.

Out of interest they are noticable at:
144.231
144.255
144.263 *
144.271
144.279 *
144.343
144.351
144.359
144.391
The ones marked * being by far the strongest.

Any ideas on other possibilities for supressing them?

BW John (UK)

I need 2 items for my Icom Z1A

I need a belt clip for this radio. I recently bought this radio used, and the belt clip was missing. I use this radio when mountian bike riding and with out the belt clip, it's a pain.

Also - I need any dead nicad for this radio:

BP- 171, BP-172, BP-173 or BP-180

Or I can use the dry cell battry case BP-170

Is this stuff laying around your shack and you want to sell it?

Dave

4783. HELP - INFO on HF Rigs

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: dgsholar@gte.net
Message-ID: <5mmc32fse1@news5.gte.net>
Source record: 174192

My son and I are both working on our upgrade to General

We are looking for a good HF rig around $1,500 or less.

I'm asking for advice on Kenwood, Yaesu and Icom rigs in this range.

I'm drawn to the ICOM 706 Mark II because of it's 2 meter and 6 meter ability's. Would love to hear from any and all who like or don't like this rig.

Or if you considered this rig and went with another type instead, ie Yaesu or Kenwood - please let me know.

I don't want to waste a lot of $$ (who does) - so help me out folks - share some of that wisdom with me please!!!

Thanks

Dave KE4YDY and
Joel KE4ZXQ

4784. Amperage draw on car battery - what's acceptable?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: "Chad Johnston, KC8ADE" <webmaster@nuwaysupply.com>
Message-ID: <01bc6cf1$d0dd1840$594e99ce@chadj>
Source record: 174193
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap

I've got a '96 S-10 Blazer with a 525 CCA (standard) battery. I had the alternator go bad on the vehicle back in January, and the dealer replaced it under warranty. Ever since, I've never been able to leave my mobile rig "on" overnight, without having to jump the vehicle to get it started in the morning.

I know plenty of other amateurs who leave their mobile rigs on 24-hours/day. I have it hooked to an external DC-powered speaker, which is switched with my ignition. So, the mobile can't even produce any audio through it's own speaker (which would draw a tiny bit more amperage).

I've checked the radio out. It's an Icom IC-2350H. On standby-receive is draws 0.42 amps. Is this outrageous? I know other amateurs in the area who leave their mobile rig on, their cell phones charging, and a spare HT charging 24-hours/day with NO problems.

I think it's the battery. The dealer I took it to charge me a whopping $91.00 to charge my battery up and tell me it was my aftermarket equipment that was killing my battery overnight. I kid you not. I could get home from my weekly 500 mile trip (which should do a great job of charging my battery), and the next morning -- click! The vehicle won't start.

The mechanic was telling me that the vehicle's battery is rated for a 20 ma (that's 0.020 amps!!!) draw, and anything over that is beyond it's rating. Excuse me, but I should be able to leave my vehicle sit for a MONTH with a tiny little draw like that -- and then when I go to start it, it should JUMP to life!!!

I'm just looking for a little information on what these batteries can handle. Currently, I have a "factory" 17ma draw for normal accessories like the clock, etc. So, if we add the draw from my mobile rig, we come up with a 0.437amp draw. HOW LONG SHOULD MY BATTERY LAST WITH THAT DRAW??

Any and ALL information will be greatly welcomed. Please email me with your responses, in addition to any posts to the newsgroups.

73 and thanks!

Chad Johnston, KC8ADE

For repeater offsets just use the split mode, works fine.

The tuning knob on my FT-757 GX II has become stiff and has a "gritty" feeling to it. I have tried adjusting the tension screw with no luck. I don't have the service manual so I was wondering if anyone out there knows how to disassemble the tuning assembly so that it can be cleaned and lubricated.

TIA

I wish you luck but you are up against two problems. First, collectors of the equipment you specified are not all that common. Second, I don't think you are allowed to by human beings these days so if you want a collector the best you can expect is to borrow of hire him rather than buy.

4796. FT290R or 290R Mark II for sale?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: greenbay@tcd.NET
Message-ID: <199705301442.IAA22269@tcd.net>
Source record: 174205

John:

What model is this? I bought my FT290R way back in 1983(?) for $300 in mint condition with all accessories. If you are selling the newer FT290R Mark II then that's another thing. If that's the case please post the whole model number. I'm sure we're all going to see the same thing with the Icom 706's when the Mark II's start showing up on the FS lists when some newer whiz-bang rig comes on the market. People will want to know which version of the rig is being offered.

I notice that the FT290R Mark II is being discounted again. Perhaps Yaesu has a new portable SSB rig in the works. Anyone heard any rumors.

73,

Gary, N7ARE

>
> Bill, KN6FJ
I have the FT-920 and like it. It was a bit confusing to use at first but that was because of all the options available. The receiver is very hot! It has better gain than a FT 690 on six and the 690 is a one band radio! The preamplifiers (sp) for hf and 6 meters work very well. The DSP unit is much better than the MFJ or Timewave 9+ that I have used with my Kenwoods TS-140 and TS 450s. I like the way you can choose to tune the xmitter and/or the receiver for a match.

I am really enjoying the rig and have moved the Kenwood to my truck for mobile use.

I think that you can get a better price from RT Systems. This is where I got mine. Check QST or call 800-723-6922. I am very pleased with the way they did the deal. The shipping was fast and done when they said also.

BTW I am not with the company. I live in OK and this was my first purchase from them. It won't be my last.

Message-ID: <01bc6d0f$aef26730$490a69dd@huckle>
Source record: 174211

Does a web site, etc. exist somewhere that highlights features, user comments, good, bad,and the ugly about various HF rigs? I would like to compare various rigs that I have no personal knowledge of but might see at the next hamfest...I know you can always look up the QST product reviews, but those don't give real in-the-field reviews and can't tell you about problems that cropped up 2 years after manufacture. Maybe we should all just pick one favorite rig that we own and use and write it up. Then someone could host a single web page pointing to the individual reviews....

4803. Re: drake l4b full power?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: res@cmprime.cis.att.com
Message-ID: <5mmuvv$m5m@anchor.cis.att.com>
Source record: 174212

: internals of the Drake amp, but I WILL point out that it is virtually
: *POINTLESS* to do what you are suggesting if your purpose is to make any
: increases in your received signal that even BEGIN to be perceptible. The
: difference between 1 KW and 1.5 kw is a non-perceptible 1.5 db at BEST,

A common misconception.
This statement might be true if you are talking about a strong signal
on a quiet band. In that case yes, the ear cannot hear the difference.
Now consider this, however:
1.5 times power increase is 2 db. Consider the 2 db as one possible
improvement that you could make to your total system gain, along with such
things as cutting down feedline loss, improving the gain of the antenna,
raising the antenna. All added together COULD result in 4-5-6 db of gain,
which makes a BIG improvement. Of the things mentioned above, that
2 db of amplifier gain costs you almost NOTHING to get ! Do it !
And just ask any DXer what advantage 2 db gives him in a pileup and see if
you get the same "POINTLESS" response you got above !! I can tell you this,
2 db in a pileup is a MAJOR improvement that will make your signal stand
out in a major way from the rest of the din.

4804. Re: HAM RADIO OUTLET SUCKS!

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: Mark Skjerve <mark@pcis.net>
Message-ID: <01bc6d18$d4a754f0$f4ebe5cd@mail>
Source record: 174213

I have never pesonally been to HRO, but just recently ordered a radio from them, and had a good/bad experince with them.

I ordered a Yaesu FT-8000 recently, I knew what I wanted, did my homework, checked prices on most all vendors on the 'net that published prices and HRO as the cheapest BY FAR on this radio.

Called to place the order, got a sales guy who could hardly speak english, ordered the radio on a monday and paid a extra $10.00 for 3 day shipping. Wendsday rolled around and no radio, called and got a tracking #, only to find out that the radio was shipped that day (three day's after placing the order). I repeated the address to the sales person 4 times on the phone (like I said, he could hardly speak english), and he still mispelled the city and the zip code was wrong. I did get a shipping number, and the radio did arrive the following monday, although I was really worried that UPS would ship it back to HRO because of a mispelled address, but I did get the radio. Never called them back to complain about getting back my $10.00 for 3 day shipping, oh well, they were $50.00 cheaper on the radio than anybody else I could find, so I didn't worry much about it.

Only other comment, I requested 4 times in the last year on their web page to send a catalouge, and never recieved one. After placeing my order for the radio, I got a catalouge in the mail 3 day's later without asking...

My 2 cent's worth...

4805. Kenwood TS-530SP information, am looking for

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: astro@bai.reno.nv.us
Message-ID: <5mmvr0$s5g$1@news.greatbasin.net>
Source record: 174214

Am seeking information on the Kenwood TS-530SP (Serial No. 6030076)

I'm a newbie ham (Tech Plus, KC7WDC), and am interested
in finding out more about the new radio on my desk.
I would appreciate any guidance you might have as to
where I might find:

a service manual
a copy of the QST review of this rig
when this model was in production
what the original retail price was
what the HAM community views are on this rig
any text or discussions of specific operating/maintenance issues with this rig

Thank you for your time.
I'll soon be operating in CW on 40m, evenings, Reno, Nevada

Nice to see a CBer not being knocked for a change.
I'll agree to dissagree on the mobile amp Will, my friend G3NNY and
myself run full legal in the mobile, to say we get jealous/sarcastic
comments from the megabuck base stations with a dummy load on a stick
for an antenna, is a severe under-statement. We have a much modded
BugCatcher and on 160m we can rattle most loudspeakers around the
country, even the dummyload on a stick op's with a deaf receiver.
We're trying to tell them to get their act together, and we're only
running a 13'6" whip. TopBand, a most difficult band to master!

I, too, had downloaded their GUI and played with it for a while. The initial feeling of the software to me is acceptable.

This new concept really requires a 2 part evaluation: Software and Hardware.

As a software engineer, I believe that the GUI is a very subjective thing to talk about. Programmers write codes according to their understanding of __HOW__ the machine works as well as the underlying object oriented anatomy. On the other hand, users want some totally different things such as the classy look and such. Without investing more ergonomic features to a software means that the program is hard to use (or sell).

The good thing is that new features can be added in the future, if the radio itself is designed to accomodate that down the road.

It is still has yet real talks about the performance of the TX/RX/Digital mode/SSB/DSP/etc. These are some different issues.

I wonder if the radio is immune to my HP Vectra VL 5/166 desktop computer. It is a FCC Class A certified equipment.

This is a daring concept because almost all of us are so used to knobs and buttons, plus $2K is a heavy investment for many people. IMHO, unless the tranceiver and the software really shine, the market will need a _L_O_N_G_ time to sbsorb this idea. I believe this is a good place to start, though.

My suggestion to Kachina is to work hard on making a good solid radio and write a good function library, as well as to keep the design open and modular. Sell the radio along with the function library for garage programmers/HAMs to make the baby really shine. For example, Nothern Telecom made its key switch system for small companies around the world. They also release firmware upgrade and development tool kits. All of a suddent, a tradional phone switch has added powerful features like Automatic Call Distribution, Call Accounting, and etc. Just think of the potential of a computer controlled radio both inside

and outside of the ham bands. For recreational purpose, how about a computerized remote controlled airplane to fly patterns? Wouldn't that be fun?

Much like Microsoft, they developed the operating systems and allow others to access to its core service with their tools, while Intel to make the chip set. Look how successful PC's are today!

I got flamed last time when I talked about modular implementation on ham gears. I can care less about that! We are on the internet! I don't understand why there are people who can never took constructive ideas that are different from theirs.

So much for now. I know that there are fans out there. You don't have to flame me.

Your scanner is picking up the RF generated by the charging circuit in
the stobe light. I don't know what the circuit oscilates at, but
basically you've got a bunch of square waves generating harmonics
charging a capactor. The only thing I can suggest is to move the
antenna as far as possible away from the strobe light.

4819. Arcron Radio Controlled Clock Review

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-30 00:00:00 UTC
From: bnb@mindspring.com
Message-ID: <33913530.16539510@news.mindspring.com>
Source record: 174371

I finally received my Arcron Zeit "ARCRON Radio-Controlled Desktop Clock Executive WWVB". That's what it's called in the manual coming with the clock. This is the clock advertised in QST, SWL magazines and several mail order catalogs, selling from $109 to $149.

I have been trying to get all the WWVB clocks that I can, to see how they compare. I have had a Junghans MEGA Desk model for several years, got an Oregon Scientific Time Machine less than a year ago for $89.95 or there abouts, and also have recently purchased the Junghans MEGA Alarm and a MEGA Wall clock.

My personal opinion of the Arcron Zeit:

PROS:

1. A signal strength indicator: bars which let you see where in a room to get the best signal, and how best to orient the clock. A very nice feature when setting up the clock the first time, especially during the day, when the signal will be the hardest to pull out of the noise and interference.

2. The backlight is more uniform than the Junghans MEGA Alarm, but that may be because it has a smaller display. Brighter than theTimeMachine's dim green.

3. Can manually set DST or Standard Time, in case it misses the change. Don't know if this is really of value or not, my TimeMachine and MEGA's never had any problem with the seasonal change.

4. Can show two different time zones at once, of course you lose the date display when you do.

5. An abbreviated instruction card is attached to the bottom of the clock, a nice touch.

CONS:

1. Not as sensitive as the Junghans MEGA's. It would not lock on in locations where the MEGA's would. My office/study is in our basement, below grade. The MEGA's lock on to WWVB whether on the wall or on lower bookcase shelves. The Arcron had to be on the top of the bookcase, near the ceiling to lock on during the day. The Time Machine would NOT sync in the basement, it has to be up in my 2nd floor bedroom.

2. Much smaller display than the MEGA or Time Machine. The MEGA uses the whole front panel of the clock for it's display, The Arcron's display size is 1 1/8 inches high by 1 7/8 inches wide. The character

height of the hh:mm time digits is 3/8 inches. The MEGA hh:mm are 1/2 inch high and the display is 3/4 inches high by 4 3/4 inches wide.

2. Even though the ad in the magazines shows 12/24, that is a "randomly chosen"? date display for December 24. The clock will NOT do 24 hour time. But, neither will the others.

3. Design is much more complicated to set up, 4 pushbuttons, not labeled on clock, so you have to refer to the manual or the chart on the bottom of the clock for their function. Button/switch function are marked on the Time Machine and the MEGA Alarm.

All this said, the Arcron does keep great time, don't see any drift whenever I check it during the day. And yes, I am the guy who sells Junghans MEGA clocks at discount, but I chose to sell them because I like them. I have had the MEGA Shelf/desk clock for over 3 years and it has been trouble free.

And anyone that sold it to you, if you don't have the proper certification that you are an authorized technician as governed by the applicable section of 40 USC Part 82 would be liable for fines in excess of $10000. Quite an expense to make a pittance on a $5 can of refrigerant, don't you think.

Are you a government agent trying to ferret out sellers of illegal refrigerant?

Are you one seeking to entrap an unwitting, or uninformed, or crooked, or illegal importer, or dumb, innocent guy that just happens to have a few old cans he bought years ago, and then turn him/her in for the sizeable reward to be gained?

While I am a certified technician, and while I'm not sure I fully agree that the shift to alternate refrigerants was warranted, I would still say, "Bite the bullet. Make the shift. It might make the atmosphere a bit better for those who follow us."

That's correct. Under some conditions, some people can discern a
smaller change by ear than I db, but on average for the population,
1 db is the smallest discernable change in sound level.

3 db is perceived as *twice as loud*, so it is quite significant.

The db scale is, of course, a log scale because the human auditory
response is also logarithmic.

In the initial set menu, setup repeater offset to be -600 kHz and setup
split to be +600 kHz. Now you can use repeater offset for those repeaters
using negative offset, and split for those repeaters using positive offset.
Simple really, but Icom should have known better.

Typically the problem is thermal. These things get *very* hot and the metalization in the module fails. Make sure the replacement is properly installed with heatsink compound and makes an intimate thermal connection with the heatsink. Add a fan if your mounting location doesn't have good air flow.

Poor thermal design is a chronic problem with Kenwood VHF+ radios. They all have problems with it to one extent or another, and the 732 is among the worst.

>buy things?

You mean besides an antenna? That's pretty important if you're going
to operate. Now if you operate HF, the best purchase may be an antenna
tuner. Most solid state rigs expect to see a 50 ohm load, and few *good*
HF antennas provide one over an entire band. (If the SWR is flat across
the band, you're probably measuring a dummy load.)

The other priority is probably *test equipment*. You can never have enough.
If you can't measure something, you don't really understand it. This list could
grow very long, but at minimum you need the basics, multimeter, scope, RF
power meter, etc. The exact RF test gear you'll want depends to an extent
on whether you operate HF or VHF+.

Another shack accessory I consider essential is a *computer*. It is useful
for *many* things in the ham station. It can host design and analysis software,
it is needed for digital operation, it can log, it can serve as your callbook, etc.

The list of accessories you might want can go on and on depending on what
you like to do in ham radio. For example, if ATV is your thing, you'll obviously
need a camera and monitor.

It's likely that it was just the alternator's time to go. From the description
of the failure, the bearings seized, and that's a mechanical problem, not
an electrical one. It doesn't sound like you were attempting to draw excessive
power from the unit.

>AC. Too bad Toshiba didn't leave a 12V DC port on the outside of the
>case. That would have made it more mobile-friendly.

Yeah, but lots of laptops want 18 VDC (that's what their wall warts supply)
to charge their batteries and leave a regulator margin for their 12 VDC
internal needs (RS-232, disk drive power, etc). So using an inverter in the
car is about your best option.

I use a 200 watt UPS in the car, with the internal UPS battery paralleled
to the vehicle electrical system with diode steering (RV kit). All I had to
do was cut the wire to the beeper telling me AC power was lost and I was
set. An inverter might be cheaper if bought new, but I had an extra UPS
that used 12 volts internally (some series connect their batteries and use
a higher DC voltage internally, these won't work in the car).

One advantage of using a UPS instead of just an inverter is that the
power is typically better conditioned and isolated from the vehicle
electrical system. That can be important if you're powering an expensive
laptop.

Get the FT-50. It can NOT do full duplex but it does have a "VDUP" mode
that receives one band and automaticaly transmitting on the other (half
duplex split band). This is about all you need from an HT. Its your
chioce.
All things considered, the 50 is best for the buck. Check the manuals of
these rigs for feature compareisions. ALLWAYS compare rig, accessories,
price and tax or shipping.

Source record: 173987

Hi All,

I just want to add a few words about Kachina Communications and my dealings with them. Last winter I found at a HamFest a Kachina KC-1 which is a 6 and 10 meter transceiver made in 1975. The radio is fully solid state USB and LSB and AM had a noise blanker and push-pull out stage that should deliver about 70 watts. I was very inpressed by the workmanship that went into the radio. It looked like a radio that was way ahead of its time. It took me awhile to find the company but once I did it has been very refreshing to work with them. I needed a manual because the transmitter wasn't working. When I send them E-mail I was sure that I would get a canned answer back telling me that because of the age of the radio they had no info on it but instead the message came back tell me the history of the radio and where did I want the manual sent. No comments about money or a minimum charge. They made about 100 of these radios and at this time they only know of about 6 that are still around. I was told that if I had any more questions or needed more help please do not hesitate to give them a call and that my message would be forwarded to the President of the Company who origanally had designed it.

So here is a company that I have not spent one red cent on giving me more help than companys that I had spent thousands with.

I have no doubt that their new radio is again way ahead of its time and I also have no doubt that it is made with the highest level of workmanship.

I am looking forward to seeing and hearing the new radio on the air and who knows one of these days instead of everybody saying:

" I am running a Rice Box radio"

maybe they will be saying:

" I am running an all US made station here a
"Kachina radio" driven by an my multi-processor
PPP+++ "Gateway Computer".

Enjoy,

WA0KDS/7 RON

PS: I do not work for Kachina and am not getting paided by them for the comments that I am making here.

4833. For sale: Yaseu FT-2400H 2 meter transceiver

I have a Yaesu FT-2400H 2 metre transceiver for sale. Included with it are the following; DC cable, packet cable, mobile bracket, MH-27 DTMF microphone, manual, service manual, reviews and original box. I just got it back from Yaesu and it meets all factory specs (receipt included). There are a few scratches but nothing bad; the display is mint. It has only been used a few times mobile, just for public service events. It puts out 50, 25 or 5 watts. This rig still has some of the best specs ever for a 2 metre. It is virtually intermod proof.
I am asking $235.00 for the above which includes shipping.

4843. Charging a gel cell battery

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC
From: Dan Walker <SciCon@ix.netcom.com>
Message-ID: <3390DA8D.40AA@ix.netcom.com>
Source record: 173998

I have a 12v gel cell rated at 17.2Ah, and I have the usual questions about charging.

Here are the specs:

cyclic 14.4 - 15.0v 4.3A Max
standby 13.5 - 13.8v no limit

Now I'll eventually build some sort of smart trickle charger for the battery, but in the mean time with Field Day coming up, I just want a utilitarian way to charge the battery.

Can I use my car battery charger? It's rated at 6 amps. Will that overheat the battery too much?

I have a charger that came with a 12v 4Ah battery used for starting model airplanes rated at 12v 500ma. Can I use that?

Can I use my HT overnight charger rated at 12v and 100ma?

Thanks for any advice

73 de KE6LBX

Ok, I've read all the replies to my statements about the quality of service I've encountered at Ham Radio Outlet. Here's my last statement. From what I can tell, the real problem for HRO is their Sunnyvale, California store. Almost all the negative replies I received were either about their Burlingame store or the Sunnyvale store. The funny thing being they closed their Burlingame store and moved it to Sunnyvale so obviously they took the bad help with them. I only heard a bad review about one other store back east. Other than that it was all good, except for the Sunnyvale location. Since the Sunnyvale location is the one I was speaking of, I feel vindicated. The good majority (75% roughly) of the replies specifically about the Sunnyvale store were supporting my position.

Overall I just wanted to see if I was alone in my opinions. I found I wasn't alone and for the most part I was engaged in good quality debate about my opinions. Of course there were the expected small minded childish replies, they didn't get in the way fortunately.

Talk to you later... KD6BYC

My favorite N connector is the Kings crimp connector. No soldering at all,
but a good strong gas tight crimp connection makes the connection rugged
and reliable (NASA approved for aerospace use). You do need to buy the
(expensive) crimp tool, but that's a once in a lifetime purchase and all your
connector woes will be over. I also use the Kings BNC and PL259 connectors.
Out of the thousands of Kings connectors we use in our plant, there has only
been one failure, and that was because some idiot was too lazy to walk to the
shop for the crimp tool and tried to put the connector on with gas pliers.

I am looking to buy a Kenwood SM-230 Station Monitor. It appears that these have been discontinued by Kenwood, and I didn't realize that. I am looking for one in perfect condition, or brand new.

If you have one, or know where I can get one, please let me know.

Thanks and 73's.

Herb - KG6OK

4863. Kenwood TM-V7A MUTE???

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC
From: ken@seemessage.com
Message-ID: <ken-3105970813390001@nas-nh1-04.ix.netcom.com>
Source record: 174084

I purchased a Kenwood TM-V7A 2m/440 mobile radio, and very much love it, EXCEPT for the fact that, unless it's cockpit error on my part, that I discovered it has no MUTE function. On some radios, even other Kenwoods, there is a MUTE function, so if the memory on the active band is busy, when the memory on the other band becomes busy, it will be muted so it won't interfere, until the active band becomes silent, at which point the other band can be easily heard. I sure miss that MUTE function on this radio.

So, any ideas? What can I (we) do? Is there a MUTE function and I just missed it? If there's NOT a MUTE function, can one be added? Is there a mod or something that would allow such a change? One would hope that a MUTE function could be added by making a change to the ROM, maybe adding another MENU function? Any MUTE ideas appreciated.

Thanks...

Ken

: Does anyone have a citation of who really made such a test and the
: result that were obtained?

Audio dB and signal-level dB are different things. What the "smallest (dB)
level discernable to the human ear" is extraneous to the present
discussion, since the human ear cannot hear RF.

If your signal is 1.0 dB below the exiting QRN/QRM noise level at the
receiver, a 1.5 dB signal gain will make *ALL* the difference in being heard!

> N4LYP/7
The DOS version of the T7A software is about $ 12.00 and ICOM will now
furnish a schematic of the cable for the asking. RT Systems has a
nice windows version and they include the cable for about the same
cost as the program and $ 48.00 cable from ICOM.
No information has been released on the actual protocol the T7A
requires so using a dumb terminal is doubtful.

4880. Power Inverters?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC
From: Greg Corteville <cortevi5@pilot.msu.edu>
Message-ID: <339057CC.2880@pilot.msu.edu>
Source record: 174101
Cross-posted to: rec.radio.amateur.equipment,rec.radio.amateur.misc

I was wondering if anybody had experience with using power inverters in a mobile installation? I used a "Power-to-go" 140 watt continuous power inverter to power my Toshiba 425CDS laptop for GPS and APRS use while on a roadtrip a few weeks ago. On my way home, the alternator in my 1990 GMC Safari seized up and stopped turning. The belt was just moving over the alternator and making a hideous noise. I was wondering if running my power inverter almost constantly on that trip might have played a hand in this situation? Or was it just coincidence that this would happen on a 7 year old vehicle with 100,000+ miles. I was also using my Kenwood 733A mobile rig on high power a few times, but not very often.

The Toshiba laptops have built-in power supplies and therefore need 110V AC. Too bad Toshiba didn't leave a 12V DC port on the outside of the case. That would have made it more mobile-friendly.

You are right there is no mute as hard as that is to believe!

Kenwood left it out! For what reason I dont know. But the usual reason is
to reintroduce it as a new feature on a later model radio. New mute!

The best work around is to use the mike remote control and vary the volume
that way. It works well.

The mile can do lots of things like vary the squelch etc.

Its an otherwise great radio.

Source record: 174105

It's easier to use the back 3-pole stero type plug. It's s cheaper plug
too. You then have fixed volume out. Use the 5100's recomended resistor
(PTT to Audio out on TNC) to "pull" the PTT.
This way you can still use the rig's hand held mic. You may want to unplug
it (hand mic) during packet so it doesn't pick up room noise.

4886. FT50,ICT7A,ICW32A advice

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC
From: igothiccup@aol.com
Message-ID: <19970531174800.NAA10132@ladder02.news.aol.com>
Source record: 174107

I'm looking to buy a handheld transciever to use with my mobile and I would like to be able to talk "full duplex" between them. I know this is possible if I go with the ICW32A from Icom, but what about the ICT7A, or Yaesu's FT50RD? Can either of those radios transmitt on one band while simultaneously receiving on the other? I really like the FT50 for it's size and wide receive range. Does anyone know if the ICW32A's receive can be expanded or not?
Thanks in advance! Aaron KC7LYF

4887. Cherokee 6-metre HT

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC
From: jstefani@mnsi.net
Message-ID: <339000ac.127179982@snews.mnsi.net>
Source record: 174108

Thanks to all who e-mailed me or posted in this newsgroup on the Cherokee 6-metre HT. In summary, it sounds like an inexpensive way to get a portable 6-m station going... but those preset 500/1.0Mhz splits may haunt some later day.

YEAH, SURE, happens *ALL THE TIME* :-)

AND, the pursuit of that last 1db is sufficient reason to push our
equipment right to the wall to obtain it, regardless of the vastly
unnecessary wear and tear it creates to that equipment. The "brute force"
method of operation common to bands like 20 meters is what makes that
band such a joy to operate for the "ordinary" ham, and we haven't even
BEGUN to address the issue of spurious emissions and splatter to the
adjacent frequencies caused in this foolish effort to squeeze the last
possible gasp from that amp.... While another ham further down the band
is working the same country using *QRP!*

PARTY on dudes - and be *SURE* you get the last POSSIBLE watt out of that
amp....

EJ (ej.mars@lagn.com)

Kenwood TS-820S - Ditigal Ham Transceiver 120-10 meters. Looks and works good. 100W output. Can be converted to 11 meters. $400

Tempo-1- Tube type Ham Transceiver/with Power Supply 80-10 meters. Looks and works good. 100W output. Can be converted to 11 meters. $275

Siltronix 1011C- 10 meter and CB AM or SSB Transceiver. Looks and works good except the S-Meter is not working.250-300W PEP output on SSB. $250.

Siltronix VFO Model 80. $75

Heathkit Hw-101- Tube type Ham Transceiver/with Power Supply 80-10 meters. Receives, but does not transmit. $100.

Heathkit SB-102- Tube type Ham Transceiver/with Power Supply 80-10 meters. No Receives or transmit. $100.

Heathkit SB-110- Tube type 6 Meter Ham Transceiver/with Power Supply. No Receives or transmit. $100.

Yaesu FRG-7 Solid State General Coverage Short wave Receiver. Looks and works Great, except the Power Switch has the tip broken off.but still working OK. $250

National Two/Seventy Ham Receiver with 6 Meters. All Tube with matching speaker $250.

Pearce Simpson, Guardian 23- All tube CB Transceiver/with mobil power cord and mounting bracket. Looks and works Good. $200.

Lafayette, Constat 25- All tube CB Transceiver. Have two. One is working the other for Parts or can be repaired. both for $ 200.

Pal, VFO- 11 meter CB $50.

Traynor, Group Two B- Audio Amp Head. High/ Low mic. in puts. Master volume, volume, bass, treble and tone shaper controls. $150

Sears- 10 channel Crystal Control Table top Scanner. $50
Regency- 10 channel Crystal Control Table top Scanner. Wood case $75

Realistic Pro30- Programable Hand Held 16 Channel scanner. 30-50,108-136, 138-174, 380-512 Mhz. $75

Regency HX2200- Programable Hand Held 20 Channel scanner. 118-950 Mhz including cell. coverage. $100

Craig- 6=94 Reel to Reel Tape Stereo Recorder. $75

AR Inc.- Stereo Amp, all solid state. $150

Heathkit- Model-AA-32 Tube Steteo Amp. $100

Bell Fax Line 1500- Fax and Phone Machine. Was working Great, but stopped working last time I plugged in. $50.

Yashica Eletro 35- 35MM Camera with Telephoto 1:4 , Wide Angle 1:4 and Tele-wide finder lense. $150

Macintosh Plus Computer- Built in Monitor have Keybord, Mouse System Disk and 4 Megs Memory. $200.

286 and 386 Mother boards and Misc Computer Hardware. Controllors, vedio, network cards. Tell me what you need.

4893. YAESU 901DM HF with AC/DC,Tuner, Keyer...

YAESU 901 DM (deluxe Model) HF 160/80/40/20/15/10a/10b/10c/10d/WWV with 11 meter mod! 100W.
SSB/FM/AM/CW/FSK.
Bright red LED Frequency display.
All solid state plug in modular boards with (2) tube, smooth finals. Tuner and finals match wide range of Antennas.
VOX. Keyer. APF CW filter. SSB notch filters. Noise Blanker. Plugs right in to AC or easy to wire for DC (AC/DC internal). Operation manual included!
Easy connections on back for patch or transverters unit (6m,2m,440).
Save big time because this highly sensitive rig has a built in AC or DC power supply, Tuner, Keyer,VOX, Current meter, SSB and CW filters, 11 mod, and optional transverters. Unbeliveable nice signal and recieve charateristics. After all, it's a YAESU. All for only $429 plus $25 shipping UPS to your front door. If you prefer COD add $49 for shipping.

>spectral requirements but has not been type accepted for that
application,
>is it still legal to use? Lastly, does anyone have a listing of the
>specific 14 frequencies used for FRS? Thanks for any info.

Eric, The HTX would NOT be legal to use on the FRS frequencies. One, it
is not FCC type accepted for that application. Second, the FRS units
operate on what is called "splinter" frequencies which are 12.5 khz split
and are between the 7 GMRS repeater pairs most if not all of your
amateur transcievers do not go down to the 100hz frequency resolution
that the FRS units operate on. Thirdly, the FRS units are limited to
3khz deviation, whereas most amateur and commercial two-way units operate
with 5khz deviation.

The FRS frequencies are-

1- 462.5625
2- 462.5875
3- 462.6125
4- 462.6375
5- 462.6625
6- 462.6875
7- 462.7125
8- 467.5625
9- 467.5875
10- 467.6125
11- 467.6375
12- 467.6625
13- 467.6875
14- 467.7125

> long as I have two batteries, I can always have one available even with the slow charger that comes with HTs. Is this true? If it is, then are quick battery chargers just luxury items? Thank you.

Hi Daniel -- you have ventured into the controversial world of NiCad battery charging. Many myths and different opinions will probably come your way.

Having worked at a place (HP) that had to have expertise in that field -- our engineers considered one the best sources to be the 'General Electric Book on NiCads' care and feeding thereof. In fact they designed their charging circuits around GE recommendations.

On the web, I think one of the better sources for information is at URL:
http://www.cc.columbia.edu/~fuat/cuarc/NiCd.html

I have seen a NiCad thread run for weeks here about NiCads with opinions from awful to expert.

Start with the URL above then get GE's book if you can find it.

May your batteries last for the thousands of cycles they were designed for.

>remotely control both sides of the radio.

I may be wrong about this, but I believe that it is only legal to use the 440 band frequency as the control channel, not 2 meters. I often use my Icom 2700 via remote DTMF control, but I always operate control on the 440 side. As far as I know, it is not possible to change bands via remote DTMF on that radio either.

If I am wrong about the regulations thing, someone please post a correction here. I'd like to know too.

>webmaster@nuwaysupply.com
Chad,

Check the battery by soubstitution. Some aftermarket batteries sold by national chains are just no good. About 1 in 4 of our fleets batteries failed after 1 year of normal use.
At a 400 milliamp draw after 24 hours you have used up about 9.6 amps of aproximatel 60-80 amphour battery . So after 48 hours you have used up 20% of the batteries total reserve. Car starting batteries are not designed for deep draws. Try a Diehard.
Also some rigs draw cuurent through their final amplifiers even though they are not turned on.
Good Luck
Dave Panek

Radio Shack carries the adapter. Caution, however, unlike the antennas made for radios with SMA connectors, the adapter doesn't have a shoulder to relieve the strain on the SMA connector. Be careful when using the adapter or you can break the SMA right out of the radio case.

4907. FAQ: Plectron and Motorola Alert Monitor Receivers

Newsgroup: rec.radio.amateur.equipment
Date: 1997-05-31 00:00:00 UTC

Add a Plectron or Motorola Alert
Desktop Monitor Receiver
to Your Scanner Collection

by Bob Parnass, AJ9S

[NOTE: This article may not be reproduced in whole or in part on CDROMS, in bulletin boards, networks, or publications which charge for service without permission of the author.]

In the 1960s and 1970s, thousands of firemen and ambulance squad members came to rely on their crystal controlled, transistor Plectron and Motorola desktop monitor receivers. They have now been replaced by battery operated portable pagers, and the desktop models are often available at hamfests in the $5 - $25 range. Since many are in rough condition and need repair, a hamfest special is better suited for hobbyists who like to fix their own radios.

Plectron and Motorola crystal controlled receivers are excellent for dedicated monitoring of local frequencies -- a task for which you wouldn't want to tie up your 400 channel programmable scanner. They are desktop models which can be powered from 117VAC or 12VDC with the proper mobile cord. The audio quality of a Plectron P1, Plectron 700 series, and Motorola Alert Monitor is far better than any consumer grade scanner and the sensitivity, image rejection, and intermod immunity is outstanding when aligned properly.

The Plectron and Motorola Alert monitors are single band receivers: VHF-low, VHF-high, or UHF. No single Plectron or Motorola Alert monitor can cover the entire 30-50 MHz band, so there were versions optimized for each portion of the VHF-low band. There were different versions to cover low and high "splits" in the VHF-high band, too. For example, low band R8000s come in 30 - 35, 35 - 39, 39 - 49, and 49 - 54 MHz versions. There are two VHF high band versions of the R8000: 148 - 158 and 158 - 175 MHz.

VHF-low band Motorola Alert monitors come in two splits: 30 - 42 and 42 - 54 MHz.

Although UHF versions of the 700 series were made, they are somewhat rare and coverage is limited to 470 MHz and below.

Plectron made several models with dozens of different options. Both the original P1 and later 700 series are suitable for restoration, although I prefer the newer 700 models. The 8000 series were even newer and very desireable, but they are difficult to find at hamfests. The Plectron 500 "economy" series is less desirable.

The P1 series have black cabinets with a blue-green and silver color scheme used on the front panel. They were made in the Chief (tone decoder & carrier squelch), Patrol (carrier squelch only), and Sentry (tone only) models. The Sentry models lack a carrier squelch and therefore are of little use to hobbyists except for scavenging parts. Model number and frequency information appears on a gummed label on the rear panel:

Band (MHz) Chief Patrol Sentry

_____
25-54 R19 R15 R17
148-174 R20 R16 R18
450-470 R23 R21 R22

Table 1. Plectron P1 models

The R700 series have black cabinets with brown front panels and are slightly smaller than the P1 receivers. R700s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
25-54 R719 R715
148-174 R720 R716
450-470 R723 R721

Table 2. Plectron 700 models

The R8000 series are much smaller than the P1 and R700 and are housed in metal cabinets of various colors. The R8000s use the same MC3357 IF/detector/squelch IC used in crystal scanners, but their crystals are not interchangeable with ordinary scanners. R8000s were made in the Chief (tone decoder & carrier squelch) and Patrol (carrier squelch only) models:

Band (MHz) Chief Patrol

_____
30-54 R8190 R8150
148-174 R8200 R8160

Table 3. Plectron 8000 models

The Plectron FM Receiver/Recorder is a collector's item. It is essentially a 700 series Chief receiver with a built in cassette tape recorder. The recorder is carrier activated and can tape transmissions while the receiver is unattended. A connector on the rear panel allows for all kinds of remote control possibilities.

I use two Plectron P1s and four R700s in my living room, seven R700s down the basement, and several Plectrons and Alert Monitors stored in reserve. The basement Plectrons are turned on automatically when someone walks downstairs. Power to them is controlled by a modified Radio Shack Safe House infrared motion detector, originally sold as an intrusion alarm.

When a rescue squad member from Missouri advertised a number of Plectrons on USENET, I bought them -- all 20+ of them. I cleaned, fixed, and restored each one. After recrystalling them on local frequencies, I distributed them to members of my scanner club who were glad to get them.

Both brands of receiver require special crystals. I sometimes use Radio Shack's generic 3rd overtone scanner crystals in the Plectrons but they oscillate on frequencies far away from their marked frequencies. That's because the Plectron oscillator is designed to be used with a crystal which oscillates on its fundamental, not overtone, frequency.

AC power cords for both types of receivers use unique connectors and are scarce. You can buy them new but it's much cheaper to drill a hole on the rear panel and attach a permanent a power cord. Make sure you use a grommet in the hole to prevent the metal chassis from chafing the line cord.

Many Plectrons and Alert Monitors were equipped with an internal NiCd battery pack, intended to power the receiver if the AC power fails. It's unusual to find a used monitor receiver with the NiCd pack still capable of holding a charge. More often, the batteries have died and the series charging resistor has overheated and burned. Be sure to remove the dead batteries as they often leak.

If you find the squelch on your Plectron 700 series receiver has too much hysteresis, replace R96, a 180K resistor, with a 560K resistor. On the P1, the resistor is designated R81.

I have not used the Plectron tone alerting features so I cannot address that except to say that the special coils and capacitors for the dual tone decoders vary depending on the tone frequencies and are somewhat difficult to obtain.

Repair service for the Plectron P1 and R700 models is
offered by:

Woodson Electronics
Plectron Place
P.O. Box 960
Imboden, Arkansas 72434

telephone 1-(501)869-7985

Some replacement parts are currently available from Federal
Signal in University Park, IL, phone (800)524-3021. You
can also get Plectron repairs and parts from:

Northeast Communications
4 Oak Ridge Rd
Newfoundland NJ 07435
201-697-8804

Alert Monitor parts are available from Motorola. Phone
(800)972-3226. |

Plectrom SM-series Scanning Receivers |

Plectron also sold an SM series of scanners, manufactured |
in Japan by the same folks who made Craig (division of |
Pioneer) scanners. The SM series are consumer-grade models |
and are included in this article for the sake of |
completeness. They are crystal controlled radios and |
feature priority scan and a separate trimmer capacitor for |
each channel to net the crystals on frequency. |

Band Frequency Limits |
_____________________________ |
VHF-low 30 - 50 |
VHF-high 150 - 174 |
UHF 450 - 470 MHz |

Table 4. Plectron SM Model Band Limits |

Model UHF VHF-high VHF-low |
_____________________________________ |
SM-301 X X X |
SM-302 X X |
SM-303 X X |
SM-304 X X |

Table 5. Plectron SM Models |

The crystals used in the SM series are quite different from |
the crystals used in the conventional single channel |
Plectron monitors. Here are the crystal formulas: |

VHF low band: |
crystal 3rd overtone freq = receive freq + 10.7 MHz |

VHF high band: |
crystal 3rd overtone freq = (receive freq - 10.7 MHz)/3 |

UHF band: |
crystal 3rd overtone freq = (receive freq - 10.7 MHz) / |
10 |

Other crystal specifications for the SM series are: |

CR 25/U holder |
3rd overtone |
20 pF load capacitance |
parallel resonant |
max series resistance 40 ohm |
max drive 2 mW |

I currently have no Plectrons or Motorola Alert Monitors
for sale. I'm hoarding them. :-)

I have upgraded my station to a TS-850S/AT, and I have an excellent condition Kenwood TS-140S for Sale.

Rig is in like new condition. Never mobile, and always kept covered when not in use.

Comes complete with Boxes, Manual, Hand Mic, and Power cord.

I will ship (Lower 48) to your Door for $575 (No COD) .

Will consider a trade, Up or Down on another HF Rig.

Thanks
David

I work on Hospital Telemetry Equipment that is very close to this
product and I think it is the way of the future. I have worked 6 years
on similar telemetry equipment and have VERY FEW HARDWARE PROBLEMS. Most
of the service calls are PC related or SOFTWARE "BUGS" related.
I predict it is the way of the future for Basestation Ham Radio.

Less than 1/2 lambda is low. If this is the case, I'd use quad. From
my HF experience Quad was much better than Yagi at element being about
6 feet or so off the ground working on typical tri-bander.

Is there an alternative refrigerant that can be used in systems originally designed for R-12? If so, does it require all of the R-12 to be removed from the system first?

(I have a car with an R-12 system - not much else was available in 1991. So far it hasn't needed any extra refrigerant...)

Source record: 173945

I have seen specs on a new radio from Yaesu, its a dual band HT half the size
of a C-508a, with twice the power! Anybody have more info?
What I have

Dimensions 3 3/16 x 1 3/4 x 7/16
Weight 4.4 oz.
Power .5 watts,1 watt with ext power
290 memories in 9 banks
Wide receive to 999mhz.
CTCSS encode/decode
DCS encode/decode
most of the other features of the FT-50r.
Oh and the kicker is IT HAS A KEYBOARD!
Does anyone know where to get one now?

Message-ID: <01bc6e2d$ff15e560$e23454c7@finn>
Source record: 174009

Hi Bob,

Here is the pinout, seen from rear:

```
3
2 4
6
1 5
```

pin 1 - ground GND
2 - transmit data TXD
3 - receive data RXD
4 - transmit enable CTS
5 - receive enable RTS
6 - not connected

There is lots of info on PC interface options on the Kentrol Web site.

Ive got a friend who is a deputy sheriff in Pittsburgh. He's got a line on an FT50R with a serial number beginning 6L. He's wondering if this can be opened up to tx above 470? there is a european model which can be programmed to do this; its possible the 6L serial number is for a canadian unit which may be openable. anybody have info? thanks all...

Dont know about that, but they h ad it right next to a computer at
dayton and it sounded pretty gud. in addition because the control head
is remote locatable, the radio doesnt have to be in the same area as
the computer.
>
>This is a daring concept because almost all of us are so used to knobs
>and buttons, plus $2K is a heavy investment for many people.

this is true, but its alot less than an ic 775 DSP or similar rig. i
wonder, comparing apples to apples (performance wise) how it behaves?

Replace the battery.

I have a 94 Chevy Impala SS and keep several Motorola Maxtrac radios on
24 hours a day. The battery holds up fine unless I Deep discharge it a
couple of times...leave the lights on or leave the radio equipment on
for an extended length of time (4 or 5 days without driving the car).
The stock Delco Freedom batteries DO NOT like to be deep discharged.
Once or twice is enough to permanently damage them. If you are really worried about it, get a deep
cycle marine battery and a battery isolator and run the radio equipment
off of it, and leave the starting battery alone. Also if you do leave
your equipment on for an extended period of time and drain the second
battery, your truck will still start.

4946. New Yaesu (VX1R) Spotted + Good Warranty Experience

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-01 00:00:00 UTC
From: enboe@aol.com
Message-ID: <19970601054501.BAA14786@ladder02.news.aol.com>
Source record: 174021

Went to HRO Anaheim today. Was allowed to fondle the new Yaesu VX1R.
Dual bander, 0.5W, 1W with power cord, Li ion battery, wide receive
including the usually-skipped 200's, small & lite, and suppose to be under
$300. Should be a strong competitor to STD 508A & 510A. Looks good too.
Was told would be available in 1.5-2 weeks.

Also picked up my FT50R from repair. Monitor button stuck. Yaesu and HRO
chose to fix it on-the-house, even though I was 2 months out of warranty.
Thanks.

Eric (K0AVW)

Kenwood (east) informed me that yes, they have sold quite a few modules
for repair purposes, indicating there is a problem. They (K-wood) also
told me to buy the replacement from RF Parts... not them... to save
money! Interesting, what?

: SORRY CHARLIE.... But no matter *HOW* you slice it, 1.5 - 2 db is for all
: intents IMPERCEPTIBLE,

THe handle's Rick, OM. (!)

We don't have a basic disagreement here. In fact I see and agree with
the intent of your statements.
A point I wanted to make was that it is a common misconception that a
SIGNIFICANT increase in power, doesn't produce meaningful results on
the air. I still stick by that and if I may I'd like to give 2
(admittedly extreme) examples to clarify my point.

On a band where signals are strong (lets say ten meters in a nice band
opening, or a 75 meter roundtable in the evening hours) yes, it doesn't
make a perceptible difference if your signal changes by 2 db, no one will
notice.
However..... if you are pushing the envelope a bit, such as on a weak
tropo opening on VHF, or trying to come out on top of a pileup
where there are 90 other signals at the same level you are, 2 db
makes a significant difference. It does, it really does.
Then I said, if the 2 db is considered along with other improvements
that could be made to a station such as lowering cable loss, improving
the antenna, etc. it just might be a fairly cheap way of getting
2 db especially if all the owner of the L4B had to do was flip a
switch and go to the 1500 watt legal limit. If the owner takes the
2 db from the linear, combines it with better coax, gets a bigger
beam, raises the tower, etc. he comes out on top. The 2 db improvement
in the linear is an important component in that equation.
I do not advocate getting the 2 db at the expense of trashing up
the bands, but I think a pair of 3-500Zs with 3000 v on the plates
is one of the cleanest linear signals. Its not the same as driving a
pr of 813s to a kw!

Nice debate - sure a lot better than all of the FS adn WTB ads on
here.

>73's DE KB8WFV

It's difficult to see how any load on the battery could cause the
alternator
to suddenly seize. It sounds more like horrible coincidence than anything
you did, unless of course somehow having to charge the battery was
the cause, and of course, just taking short trips can cause the
alternator to run more but once again that's supposed to be part of
the operating cycle of the electrical system in a car.

It sounds more like an alternator without sufficient lubrication going
crazy, hope it didn't hurt your wallet too much!

4973. Every dB counts

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-01 00:00:00 UTC
From: km1h@juno.COM
Message-ID: <19970601.114823.9695.2.km1h@juno.com>
Source record: 174048

Gary and others do not confuse lab tests run at audio and expect them to be identical in all RF receiving applications. In fact the accepted standard at audio today is that everyone can discern a 3dB change, 50% can discern 2dB and a small number can tell a 1.5dB change. This is in a controlled enviroment.

At RF even a 1dB improvement can make the difference when the signal is at the noise. I noticed a big improvement on 160M DX CW QSO's when I went from 800 to 1200W. Numerous DXers and Contesters have noted that going from 100W to 1000W makes a lot more than an APPARENT difference of 10dB during certain propagation conditions on any band. There appears to be a threshold level where a higher percentage of the signal is either absorbed or reflected.

EME operators fight for tenths of a dB in their systems and have proven time and again that every fraction of a dB is important.

Then there are those other times when I would 100% agree that even 3dB makes no apparent difference.

From: griffin@jgfl1.allcon.com
Message-ID: <EB3F4w.3LL@jgfl1.allcon.com>
Source record: 174053

I'm using a 12v gel cell at 9.5Ah and have built a simple charger
with a 7815 followed by one or two silicon diodes to achieve the
necessary voltage drop (1 diode => 14.4V, 2 diodes => 13.8V).
Since the maximum charging current is a bit higher than the maximum
current from the 7815, there is no need for other current limiting.

I'm sending the schematics via email.

Hope that helps,
73, Jens, DB9LL

Hello.

I am considering to buy a new HF tranceiver w/6M (+ 2M preferable,
but optional) with a reasonable price. (well... I have to get a morse
code qualification first though. I will try to get a CW qualification
within a month or two... as soon as I finish the school !!)
I am looking around CAN$1500-2000 (US$1100-1500).
The tranceiver must (be):

- All mode TX, All mode RX
- Min. 100W HF + Min. 10W 6M TX
- multi continuous RX
- Antenna Tuner

ie. Kenwood's TS-570S

If there is a used equipment that fits above catagory [must be able to
tune in digital (I am not looking for something that is 10 years old
!!), all mode TX tranceiver], I am willing to pay 50-75% of new
equipment price. I, however, prefer a new one as long as the
warranty is concerned.

Thanks for your help !!!!!

Mark,

I have an old PA amplifier that looks as though it may have come out of the thirties or forties. It uses 6L6G, 6N7s, etc. Am not sure of the brand and haven't fired it up yet. It has a grey hammertone chassis sith sloping front panel and has a grey hammertone cage. Overall condition looks to be quite good. Is this something in which you might have an interest? I likely will check it out and get it operational before too long.

Looking for anyone who has the cloning cable or the schematics for it.

Also, if you have a problem with high mic gain on this unit, call Icom America and they can send you the modification for it or you can send the microphone in and they will modify it for you. The modification reduces the mic gain by 10dB, and REALLY cleans up the Xmit audio. Makes it sound like the great radio that it is.

For modulations where SNR = CNR, IE most modulations we use other than
FM and some digital techniques, there is a one to one correspondence between
RF signal ratios and demodulated signal ratios (discounting use of AGC). A
db is a db. For example, for SSB one can consider demodulation to simply
be frequency conversion from RF to AF with any signal dynamics preserved
in the translation.

For systems such as FM, modulation indexes greater than 1 allow recovered
SNR to exceed CNR. And of course coding gain can do the same for digital
modulations. So the correspondence isn't as straightforward in these cases.

About using CB antennas on a 2-M rig; there is a 2-M strip-line
filter in the ARRL Handbook that I made one of, and it matches
2-M to CB antennas like crazy!

A foot of 1/2" copper tube and a var cap and a couple 50-ohm
connectors and a 2" X 2" X 14" box, and a bit of patience is all it
took.

Try it, you'll like it.

It seems to me, if you are using the UHF side for remote control, and you change the UHF frequency established for control, then suddenly your mobile will be listening on it "control" band to a DIFFERENT frequency than you're transmitting on from your HT, therefore, it won't work. My Icom IC-2350H operates the same way. I CAN'T change the UHF side since it's used for remote control and must remain on the same "control" frequency.

That is MY justification for NOT being able to do that...

: anyhow, back to the original question:

: will i damage my tubes? :-)

Nah.
You are going to run about 2500 watts input to get 1500 watts out. That is 500 watts dissipation per tube, intermittant duty (ssb or cw assumed). If you never stopped talking you would still be well within the ratings of the tube. And the amp gets to cool off even more during your receive periods. If you are reasonably carefull tuning up those 3-500s should last a lifetime.

5004. FS or Trade: FT2400H 2-meter mobile

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-02 00:00:00 UTC
From: Robert Chisholm <chisholm@spec.com>
Message-ID: <01bc6f68$9071f2c0$c0956bc0@sleepy.spec.com>
Source record: 173881
Cross-posted to: rec.radio.amateur.equipment,rec.radio.swap

I have a Yaesu FT2400H 2 Meter mobile with mike ,dc cable, mounting bracket ,
factory box and manual for sale or trade. I really want to trade it for a very compact 2 meter mobile such as a Kenwood TM241, IC 281, or Alinco 150 T. I bought a small car and the Yaesu is to deep to fit in the good location. Any radio I trade for must be in excellent condition as this radio is. Again the key word is "compact". If you want to buy the radio outright I would like $245.00 for it but I really just want to trade it for what I need. Please send offers to chisholm@spec.com. I am in the Austin, Texas area.

I suggest yo don't give him any info at all. Being a deputy sheriff it would be in his interest to report anybody suspected of using such a radio to tx out of band. No service, other than amateur radio, and perhaps some experimental licences, allow tx with non type approved radios.

>So far it hasn't needed any extra refrigerant...)

There is an alternative. It is called GHG-12. It isn't certified for automotive use, but it isn't forbidden either. It will mix in any proportion with R-12, and it is compatible with the lubricants used with R-12. Best of all, it is cheap, and you can even make it yourself. It is a mixture of propane and isobutane, 80/20 by weight. It actually offers about 10% better cooling efficiency than R-12 and contains no ozone destroying chlorine (note that R-134 *does* contain ozone destroying chlorine, just not as much as R-12).

Don't be concerned that this is a combustible mixture. R-134 *with its lubricant* is also a combustible mixture. In the quantities used in an automotive system, there is no excess hazard from using GHG-12.

Source record: 173890

I personally am a big fan of mail order. I'd rather not give the xtra 5.25% to the state of Ohio. I live/work winthin 30 minutes of the Wickliffe, Ohio Amateur Electronics Supply. The people behind the counter are, for the most part, nice guys. All hams (and they can speak english!). I go up there on my lunch hour sometimes to just browse the store. I don;t look at too many radios, they're behind the counter, and if you're "just looking" they're typical in what I've seen in store front/mail order companies. They'd rather take the commission on the 5 mail orders they get on the phone, than waste 20 minutes with you. It's rather understandable. Most of thier business, and HRO's comes from mail order phone orders.

I will buy smaller items at AES, books, tapes, maybe an antenna. But I usually go mail order for the bigger items. I can almost always get a better price. However, I have bought a couple HT's from AES in the store. But all of my mobiles have come from other places. I have found Oklahoma Comm Center to be okay on price, too.

Just my two cents.

Source record: 173904

I'm trying to find out if the new MK II version of the IC-706 will support CAP/MARS operations in the HF and 2m bands. Specifically:

1) Can it be modified to transmit and receive outside of the normal ham bands, and

2) Can it be modified to operate with a TX/RX split of at least 5 MHz in the 140 -150 MHz range?

I have received conflicting reports from official and unofficial sources on the above. I would like testimonials from those who have actually determined the IC-706 MK II's capabilities in this area.

Thanks. (BTW, this is a "legitimate" request: I am active in both CAP and MARS).

We're clearing out the garage!

This garage, however, contains an extensive stockpile of NOS and used vacuum tubes which has been growing since the mid-1930's.

The collection was amassed by a radio enthusiast who, having received certification as a radio techician in his teens, served as a radar tech during WWII, worked for Westinghouse post-war, owned a radio shop during the 50's and 60's, and currently restores vintage radios.

This inventory, of over 800 tube types, includes many rare pieces, all at fair prices. To request a partial stock list, which includes Sweep Tubes and others used in Transmitters, Linear Amps, Audio Equipment, etc. please email:

locoprom@adan.kingston.net

Thanks for your interest!

If you have an Australian version FT-26, it uses a CPU that has
Australian band plan repeater offsets, but won't allow general coverage
transmit operation. Other functions are pretty much the same as the USA
version.

Cheers,
Chris Ayres,

i agree as well. when you look at the math:

10dB=log (Pf/Pi)

for an antenna claiming 8dB gain then the ERP difference between 800 watts out, and 1400 watts out is:

10 E(-0.8)= Pf/Pi

or 6.3= Pf/Pi

for 800 W, ERP is 5 KW. for 1400W ERP is almost 9 KW.

while all the points made about relative signals 'sound' true, discussions ive had on this issue with some dxpeditioners of the Frankford Radio Club using blind tests indicate that 1 dB does make a 'hearability' difference.

anyhow, back to the original question:

will i damage my tubes? :-)

Hi Folks,

Does anyone have a copy of the circuit for the Heathkit SB1000 single 3-500 linear. My instruction manual is missing page 70-72 and I want to modify it as I put the kit together to cover 6m in place of 160m.

I'll pay etc

Many thanks

Duncan

There are 2 stations in our area running packet at 50.610. They are:
KB9GSS PBBS on Port 2 and WA9VRH PBBS on Port 4. Both run at 1200 baud
and are attached to nodes which connect to HF, 2M and 440.

5065. Help: Need repairman for AT-250 ant. tuner

Hi and thx for reading.
I have a Kenwood AT-250 that appears to have a problem with the relays; in auto-tune mode, the set appears to reach an endpoint and then simply sits there (running). Looking for either a Maine repairman, by-mail repairman with references, or info on how to contact Kenwood to arrange repair. To anyone with a similar experience, please send info regarding repair cost, etc.
Thanks and 73

Source record: 173781

Ten-Tec Omni VI PLUS:

Is there anyone out there who happens to be using this rig for both
CW as well as the FSK mode?

Is it possible to have physically installed the FSK 500 Hz filter
as well as the CW 500 Hz and 250 Hz filters, and be able to
utilize each of those filters for the appropriate modes?

I operate mostly Pactor and CW and desire the capability of
being able to switch-in the appropriate filter as needed.

Thanks and 73. --John, K8JS

5074. HF remote controlled stations

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-03 00:00:00 UTC
From: morel.GRunberg@telrad.co.IL
Message-ID: <c=US%a=_%p=TELRAD%l=MISMAIL-970603125935Z-280@mismail.MIS.ELEX.CO.IL>
Source record: 173782

I'm living in a very densely populated area with a lot
of electrical noise from HV lines and a bad antenna
location due to a lot of taller buildings around. For
this reason I've decided to install a HF complete station
on the sea beach, about 150' from the water line on the
roof of a hotel which manager is an old friend. I'm
living about 2 miles from this point and I don't have
any problem to reach the remote QTH by VHF/UHF
link or regular phone line .

I intend to remote from my home a HF transceiver, a
automatic-tune amplifier 500-1KW output, 2 beams
mounted on same tower/rotator, a vertical and a wire
antenna.

My questions are:

* what amplifiers can be remote controlled by a RS-232
link (I know only about the AlphaPower 87A model and
maybe JRC-2000) ? Which software is doing the job ?
Is the software able to indicate the forward & reflected
output power on same window ?
* what antenna switch matrix can be remote controlled in
same manner (I know only the AlphaPower). Is Alpha
supplying a common software for the 87A and antenna
switch ? Can they be controlled at same time ?
* what antenna rotator can be remote controlled (I know
only about Yaesu G-1000SDX and G-2800) ? Is Yaesu
supplying the needed software ?
* Is there any software package available today capable to
integrate on same data stream all the transceiver features
and commands, the TX/RX audio, the amplifier on/off switch
and bandswitch, antenna selecting switch and rotator control ?
or I have to use 2-3 separate links ? What are the proper
modems for this ? The new Kachina Communications 505-DSP
PC-controlled transceiver seems to solve a part of the problems
and I beleive that their remote control feature combine the TX/RX
audio from the SoundBlaster with the rig features commands
stream. Any other aplicable solutions ?

Please reply directly to my e-mail: morel.grunberg@telrad.co.il

Actually held one in my hand at Dayton. Nice unit. Looked like something
I'd
hang on my keyring. Didn't have a keyboard though, just 4 buttons on the
front.
Also didn't have FCC type approval yet. Yaesu said hopefully they'd have
it
by the end of July. Price about $230 US.

I just re-built mine. Took it all apart, replaced all the old grease
and generally cleaned it up. I'm pretty sure that Telex still supports
these rotors, as I got parts for mine from them a couple of years ago.
I also replaced the motor capacitor in the control head. They're probably
available from Telex, although I got mine from W.W. Grainger, for $2.50.
Hope this helps.

I've had a '50 for about a year now. Great little rig, with an extremely sturdy design. I can be a bit of a klutz, and the thing has been subjected to a few "four foot drop tests". It still works like the day I bought it.

I especially like the AMS-1C software programming. Sure, it costs a few bucks extra, but it makes managing large numbers of repeater settings, etc. very easy to manage.

My only beef is the antenna connector. I occasionally connect the rig to a mobile or base antenna, and the small SMA connector on the FT-50 requires an SMA to BNC adapter.

Your battery is toast. Get a new one. With less than a half amp of
draw, the battery should last for hundreds of hours.

5091. FS: Systron-Donner Time-of-Day Digital Clock (Time Code Generator)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-03 00:00:00 UTC
From: scott@gorzarg5.phy.bnl.gov
Message-ID: <5n1cjb$hjv@sun20.ccd.bnl.gov>
Source record: 173799

FOR SALE: Systron Donner Time Code Generator, Model 8120.
Asking $55 plus shipping.

This is a fancy Time-of-Day clock with display of Day-of-Year, Hours, Minutes, and Seconds. Also outputs IRIG time code (for those of you doing missile flight telemetry).

Unit is in working condition. I used it for a few weeks, until I found a neater clock :). The time-code output appears to be working, but I can't decode it, so I'm not sure.

- Rack mount unit, 17 inches wide, 17 inches deep, 3.5 inches tall. Rack mount ears are missing, as are cosmetic side panels.

- Neon seven-segment display of days, hours, minutes, and seconds. NOT LEDs, neon. All segments work.

- Front panel mounted thumb-wheel switches for setting of days, hours, minutes, and seconds.

- Front panel switch for PWR OFF, STOP, HOLD, and GEN.

- Front panel toggle switch for RESET and PRESET.

- Front panel is clean, no scratches, dings, or old stickers.

- Rear panel connectors for EXT OSC IN (1MHz), UPDATE, DC CODE, CODE OUT, BCD OUT/SEARCH CONTROL, and PULSE RATE. Also switches for ID/366/365 for DAYS display, and INT/EXT OSC.

- Inside is very clean, no dust accumulation. Card extender board included.

- Internal 1MHz room-temperature oscillator.

- All TTL logic, 1974 date codes.

- Uses current 5-sided modular power cord (not included).

- Weight approx. 20 lbs, shipping from zipcode 11973.

- No manual or other documentation.

> Which software is doing the job ?
> Is the software able to indicate the forward & reflected
> output power on same window ?

In the case of the AlphaPower 87A, the software is built-in to the amplifier. You only need an ASCII terminal or a simple terminal program running on a PC to communicate with the Alpha. The 87A uses a typical command line interface. For example, if you type the command 'PWR<ENTER>', it will display forward power. There is no command to display the forward and reflected power at the same time, but there are two separate commands used for this purpose, one for forward and one for reflected. The command set allows you to control every function of the amp (including power on/off and standby/operate.) The amp was specifically designed for the type of remote control you have in mind.

> * what antenna switch matrix can be remote controlled in
> same manner (I know only the AlphaPower). Is Alpha
> supplying a common software for the 87A and antenna
> switch ? Can they be controlled at same time ?

Alpha's DAS antenna switch is daisy-chained to the 87A so it can be controlled over the same RS-232 interface. There are two ways to change antennas. The simplest way is to set the transceiver to the desired frequency and transmit. The 87A detects the frequency change by sampling the RF and automatically switches both the amp and the antenna switch to the correct band segment settings and antenna. This takes less than a second and no part of your transmission is lost (it will pass the RF through from the transceiver until the switching is complete.) You can also use specific RS232 commands to switch bands and antennas (e.g., if you issue the 'band 1' and 'ant 3' command, the 87A switches to 160 meters and antenna number 3.)

> * Is there any software package available today capable to
> integrate on same data stream all the transceiver features
> and commands, the TX/RX audio, the amplifier on/off switch
> and bandswitch, antenna selecting switch and rotator control ?
> or I have to use 2-3 separate links ?

I don't know of any software that can do this. The problem is that there are a lot of different command interfaces to support out there, and a limited market for this application. Each device has a separate RS232 interface. The best (and perhaps only) way to really solve this problem is to use put a computer in the remote shack and operate it from packet or a telephone modem (this is your control link.) You will need one port for the packet or phone modem, one port for the transceiver, one port for the amp, and one port for the rotator. Then you need software that can accept

commands over the packet or phone link, select the appropriate port, and pass commands to the desired device. I know of no software that is engineered to do this (although it may exist.) However, you can write your own using a terminal program with a built-in scripting language.

Some scripting languages are powerful enough to do this, while others may not be. The nice thing is that you don't have to write a bunch of complex communications software to run the ports. A relatively simple script can be written to monitor the packet or phone modem port for commands you issue remotely. Then it switches to the desired devices, passes on your commands, and returns status from the devices (if any.) I wrote such a script in order to make coax power loss measurements at my antenna without any help. I use a miniature portable packet station (Baycom TNC, HT, HP 100LX palmtop computer, and a battery) to communicate with a computer and packet setup in my shack. The transceiver is the Kenwood TS-950SDX. I can issue commands that tell the computer to set various transceiver modes and frequencies, turn on the amp, set the amp to operate, and transmit on/off (or operate the Kenwood's built-in memory keyer or voice record/playback.)

I used a product called MLINK. That was my choice because I co-designed and sold it for over ten years, so the script was easy for me to write. Unfortunately, this program may be difficult to obtain since it is sold exclusively to businesses and is not sold through typical retail channels (I sold the company and product, both of which ended up in the hands of Computer Associates -- you could try contacting them.) Another good choice would be TERM, from Century Software in Salt Lake City. There are probably a bunch of other ASCII communications programs with scripting languages, but you have to pick one that has a language powerful enough for this application.

As for the TX/RX audio, I don't know how that would work (I'm not familiar with the Kachina transceiver.) Seems to me that the best way would be to hook up the transmit and receive audio to a phone patch and use a phone connection for that part (and use packet for control.) You could also use VHF, but that's probably more expensive (it would be best to use two full-duplex dual banders.) If you want to send CW, you would probaby have to wire up a keying line to the shack computer's LPT line and write some software that sends CW. That's not particularly easy to do!

That's my take on the situation. I have a feeling it might be less expensive to isolate your home shack from the RF interference (like, build a metal cage around the room and filter the heck out of the power lines.)

Speaking of rotors, I have an old HAM2 rotor and control box. I've had
it in the air for almost 20 years. It still works great, except I cannot
keep the control box in alignment. When I depress the switch to align
the needle it will not always rest on the SOUTH, and I cannot turn it
far enough to align. Also, it 'creeps' up the scale the longer it is
on. Obviously something, and I think the something is in the rotor, is
changing value. I'm just no sure what. Any ideas?

Thanks....

I think you can get an equivalent test at your typical Sears Automotive Service Center, for example. It now is all computer-controlled, digitally-accurate, with real-time loads.

Subj: Ranger 2950 mods

Someone here recently posted a message asking for available mods
for the Ranger RCI-2950 10 meter radio. Here's what I have.

Frequency Modification
1. Remove the case. I *think* you can remove either the top cover
or the bottom cover to get to the PC board with the jumpers.
It will be a small PC board immediately behind the front panel.
2. Locate "J2". There will be a jumper on pins P3 and P4.
3. Remove this jumper to expand coverage to 26 MHz - 29.7 MHz.
4. Move the jumper from P3-P4 to P1-P2 to expand coverage to
26 MHz - 32 MHz.
5. After moving (or removing) the jumper, press the CPU reset button
(located below J2).
NOTE: Operation between 30-32MHz may require retuning the VCO.

CB Channel Readout Modification
1. Locate J1. There will be a jumper on pins P1-P2.
2. Remove jumper and place on P2-P3.
3. Press the LOCK button on the front panel. The readout will now
display the CB channel number 1-40 -- also will display "A" channels.
4. Press LOCK again to return to VFO mode.
NOTE: The SHF button will not operate while in CB mode.
This modification will disable the frequency lock function.

CB Channel 9 Select Modification
1. Locate J3. There is a jumper between P1-P2.
2. Remove the jumper and place it on P2-P3.
3. Press the "roger beep" button to go directly to CB Channel 9.
NOTE: Doing this modification makes it impossible to turn off the
roger beep feature (unless, *possibly* you make sure the
roger beep is turned off before moving the jumper. I'm not
sure).

"Tuneup" Modifications

Adjust VR14 (AMC) for maximum forward modification. Mod limiter
Q32 can be removed for more modulation, but it also disables VR12
(SSB ALC) and disables variable power for SSB. I do not recommend
removing Q32; you'll have plenty of modulation as is.

Tune L34, L13, L14, L46 and L10 in AM mode for maximum forward
swing, using a peak-reading wattmeter. Try to balance for even power
from top to bottom of frequency range.
NOTE: You'll have a LOT of trouble identifying these cans. Sorry,
I don't know for sure where they are either.

Adjust VR13 (AM High Power) for 12 watts dead key with the front
panel RF power control at maximum. Adjust VR15 (AM Low Power) for
2 watts dead key with front panel RF power control at minimum.
From the 12-watt dead key you should see a forward swing of 30-40 watts.
From the 2-watt dead key you should see a forward swing of 18-20 watts.

Adjust VR12 (SSB High Power ALC) for maximum PEP on SSB, then
back off just a little, with front panel RF power control at maximum.
Adjust VR16 (SSB Low Power ALC) for 5-6 watts PEP on SSB with front
panel RF power control at minimum. You should see 40-50 watts PEP
on SSB with front panel RF power control at maximum.

Microphone wiring diagram

Pin 1 -- shield
Pin 2 -- Audio
Pin 3 -- Transmit
Pin 4 -- Receive
Pin 5 -- Frequency select up \ These might be reversed.
Pin 6 -- Frequency select down /

Disclaimer:
The preceding message is posted for information only. I do not condone the modification of amateur transceivers for use outside the amateur band. It is *possible* that performing the tune-up modifications will shorten the life of the radio's components due to driving them too close to their design tolerances. I accept no responsibility for possible damage to any radio that is modified in this way. I cannot personally vouch for any of these modifications; they were given to me by a technically-inclined friend.

If you are going to use a power inverter while you are running
the engine (which is the only way to use one) you must have a LARGE
battery, two deep cycle moterhome battries are best in place of your
regular battry. You cant draw from the alternator to power the
inverter, it has to draw from the battries and the alternator will
keep them charged.

The best investment is BACK-UP POWER!!!!!
ie 12v deep cycle battries (mor than just one) and an automatic
charger to keep them charged at all times.
Second, A generator either 110/220vac at about 5 to 10 KW
to run not only the radioes but also the refer and lights and cooking
applinces, OR atleast one that you can QUICK charge your 12v
battries with.

The Marymac franchise was bought back by Rat Shack. U.S. Radio in Ft.
Worth was still discounting Rat Shack stuff last I heard.

>Bill WA8INZ

I use a FT-5100 on packet all the time. I chose to use the rear
connector as per the wiring diagram provided with the radio. There is
apparently a resistor in series with this connector so you don't kill
the mike input by being hooked up for packet at the same time. OTOH you
must set the TNC to high audio output to achieve proper deviation. I
find this packet setup quite convinent.

A 50MHz report for Yaesu UK Ltd: =

THE NEW FT920!

Here is Yaesu's new Baby! The FT920, sister to the famous FT1000MP, its
built like a tank, and performs superbly with the AF DSP.

Where do we start with a new Radio? we have to look at what is offered
in =

terms of new Technology! The Yaesu FT920 is new "HAT", a new radio, new
techniques!

Mr Barry Cooper of Yaesu UK Ltd asked me to "give it the works" on
50MHz. So here are a few of my findings! =

OPERATIONAL FEATURES!
I must say that on unpacking the Radio I was amazed at it's size, it's
about the same size as an FT1000MP and "really" feels like a radio. It
operates on DC not Mains AC. so you need a 20amp PSU.

Some months ago I had sold my trusty FT990 and had regretted doing so,
however, the FT920 has put the smile back on my face!
The front panel layout is well thought out with a dual bandstacking
keyboard available, twin VFO contols grace the front panel, but note!
these are for split and memory operations and not FULL "twin receivers".

DSP Unit!

(My comments on this have been noted to Yaesu UK Ltd and also to Icom UK
Ltd, on their IC 756, dedicated 50MHz users, and there's THOUSANDS of
us, require a radio that has two receivers so 28MHz AND 50MHz can be
monitored at the same time, I hope one day manufacturers will come up
with such a radio!)

I won't go into the HF side too much as I was asked for a 50MHz opinion.
IT DOES NOT DO DUAL RECEIVE! but does dual watch, ie ONE receiver!
Dual watch is fitted and the time delay can be varied, this is quite useful, as instead of scanning memories for say 28.885 and monitoring 50.150 etc, both vfo's can be programmed and "flipped" between 3 to 15 seconds. The time delay is set via a menu, yes! the FT920 has the new technology menu system like other radios, a menu system that usually contains sub menu's and further sub/sub
menu's.(sometimes known as a pain!)

Not so with the FT920 though, it has only ONE menu that controls ALL functions of the radio, 73 in all! that's a nice feature. I, like many, cannot remember all the sub/sub menu settings, and so just one menu is a much better idea.

The FT920 supports all modes, however I was surprised to see that the FM unit is optional. (see my comments later on the price structure).
Despite the rumours that the Digital Voice recorder is optional the news is that it is a standard feature (and that's worth 200 UKP) and boasts 2 "8" second memories, and 2 "4" second memories, (it says in the manual 16 seconds each!), Also the DVR can be left running in the receive condition, when put
into the play condition it will play the last 16 seconds of recorded receive audio, this is the same as the DVS2 that was an option with the FT650 and FT990/FT1000 radio's, the CW memory keyer is also standard and also boasts 6 memories, four 50 character and two 20 character. Both the voice recorder
and CW keyer are controlled by one set of switches, a PLAY and a RECORD. (ie PLAY 1/2/3/4) The CW Memory keyer is a "paddle/key" input device, the same as =

a "Super Keyer"(reg TM) This is much better to input data rather than using a keypad like the IC756. Weights and ratios can again be adjusted via the on screen menu.

The receiver front end has a Jfet and a Mosfet device, these can be swapped through the menu system if required, so that the Jfet device can be used at 50MHz instead of it's allocated bands of 160mtrs to 12mtrs and increasing dynamic range and less sensitivity. The 28/50MHz section incorporates the Mosfet RF stage. (lower noise figure) Three levels of attenuation are included of 6, 12 and 18db. =

THE NOISE BLANKER!
The noise blanker in this radio does actually work, it is also adjustable, however, there is a problem in this area especially noticed on HF.
Switching on the noise blanker with the audio gain turned off strange burbbles and whistles can be heard very weakly in the loudspeaker, using headphones really shows this up, there seems to be some kind of leakage/breakthrough of frequencies above and below the dial readout frequency. This is NOT the usual Noise blanker overload problem and it was noted on ALL HF bands.
Removing the antenna cures the problem, and note DSP was not turned on.

It is very weak but annoying, and maybe also due to the fact that my FT920 was one of the first radio's out. There is no sign of this problem on 50MHz.

DSP/NOTCH FILTERING/NOISE REDUCTION:
I was impressed here! wow! The Auto Notch filter is superb, I noted a station on 50.125 and had a computer birdy on top of the station at S5, hitting the auto notch REMOVED the computer junk and left a crisp clean signal. I could not believe the effect it had, but it is true! BTW don't try using the auto notch on CW otherwise the station will disappear! DSP high/low cut was also very effective in producing stations out of the noise, something we all dream of. The DSP operates at 33MIPS and is Audio DSP.

I have limited circuit information on the DSP section and note that it is built around a 120 pin LSI, I just hope that this IC never blows as that would be a major job to replace!

The noise reduction system seems to be much better than the IC756 that I tried, on the Icom a type of
"phasing" noise was noticed on the receiver, this was not so on the FT920.

TRANSVERTERS?
The radio does not offer any dedicated transverter ports, (ie any low level TX), but! it offers something quite unique! If the TX LED is pushed it goes into a low power mode offering a maximum of 10 watts which can be reduced with the power control to Zero! Another way of lowering the output for transverting is to initiate the power level settings in the menu, the levels at antenna ports can be adjusted to output 10, 50 or 100w, ensuring safety for your
transverter. FM scanning steps can be adjusted from 0 to 100kHz. There's also repeater shift for the VHF bods! =

MEMORIES!
The radio has 99 standard memories plus 5 "Quick" memories, and 10 split memories and a call memory for each band. Seven characters can be added to name each memory. =

LINEAR TUNER!
This is a first from Yaesu! a "Linear Amplifier Tuning Device". Hit the "ENT" key when in menu #52 and the FT920 emits a tuning pulsed signal, this pulse can be adjusted in frequency and timing upto 60 seconds. Very useful! =

VOX OPERATION:
The radio has vox, however, there is no indication to let you know that vox is selected! An LED needs fitting or the display should indicate this!!!!!! =

PRICE STRUCTURE:
My personal point of view is that this radio is under priced compared with other radio's of it's class, it is not an "added to FT1000MP" it is

a dedicated made machine offering superb craftsmanship and technology! =

OPRATIONAL ON AIR TESTS:
The tailormade voice facilities that are offered (DSP audio tx).
There are 4 levels of TX DSP, some are broadcast quality and some are punchy contest quality, it depends on your voice characteristics which will suite you. You can monitor the audio DSP via the radios own "MONI" function and headphones. I have worked 36 Countries on both CW and SSB on 50MHz with very good reports during the past week, including Country #158 SU1ER, others included JY9QJ, OD5SB and 4X1IF which are all over the 3500kms distance.
Nobody had any adverse comments on the signal (apart from my voice characteristics!). The receiver handles well, local signals in GJ were loud clean and narrow, however, local stations only run a max of 100 watts but considering GJ is only 45 square miles signals were endstopping with no intermod problems noticed. Several stations in Europe were excessivly "wide", and I'm sure that was their non linearity at their end!

On 7MHz the receiver showed no major intermod problems and copied JT at S5 when other G's were giving 5/1 reports, the antenna used was a 120ft long wire sloper poised at 100ft. The antenna tuner works on Rx as well as TX although this has to be initiated via the on line menu and not as the instruction books says (default). CTCSS is standard so you can access your local repeater. (fit the FM board first!). VHF repeater shift is included and adjustable up to 5MHz through the menu.

Different power levels can be set at the two antenna ports by the menu. Vox is included and also is a speech processor which worked quite well in our tests on the air. Scanning speed was good with adjustable time from 1 to 100ms per step. =

FREQUENCY COVERAGE:
The 50MHz section covers 48 to 54MHz, I'm currently in touch with Yaesu to see if this can be expanded to 30 to 54MHz, I feel sure it can as the IF is 68MHz. =

CONCLUSIONS!
This radio is undoubtably the best 50MHz radio I have ever operated, it will take pride place in my shack and the FT736 and FT650 will now be used as backup radios! Yaesu have certainly produced a radio that is a delight to operate.
The instruction book has many errors but these have reported to Yaesu, that and the noise blanker problem are THE ONLY faults I could find so far :-)

Yaesu UK Ltd Price =A31699.00. Ex Taxes ONLY =A31250.00 plus carriage! =

FM Unit =A349.00 inc VAT 13.8 Volt ONLY. No mains Version available. Mosfet PA finals. Quick Memory Banks Built in RS232 level converter....and lots more!

Geoff GJ4ICD 50MHz DXCC #33. 158 Countries on the Band!

There's another alternative, which is approved for use in autos and just
about anything else, calles R-406A. This is a drop-in replacement for
R-12, invented by the same guy as GHG-12 (George Goble). Take a look
at his web page at http://ghg.ecn.purdue.edu for more info and some
pointers to distributors. There's also some cool info on how to light
your barbeque in 3 seconds or less (hint: LOX).

I guess the real commercial web site is now
http://worldserver.com/R-406A/peoples/ghg/ghg.html
--

Replace the capacitor in the control box. If you cannot get the right capacitance at the usually 50 volts rating, take one with a 117 volts rating, which should be available at any electric motor shop.

> Speaking of rotors, I have an old HAM2 rotor and control box. I've had

> changing value. I'm just no sure what. Any ideas?

think of it. Why should something purely mechanic in the rotor behave this insensibly? Chances are, it is an old paper type capacitor slowly "dying" (and changing value erratically....)

We are a small Police Department in Texas. We have 20+ Bendix/King AN/PRC-127 hand units. These units were procured from the military for use by tactical officers.

Bendix/King is unwilling to talk about these radios other than the fact that they acknowlege they exist. It is very frusterating - makes one want to think about a boycot.

We have no real budget at the department and these radios have filled a void that otherwise could never have been accomplished.

I have heard of several modifications that can be performed on these units. I am seeking information on any and all modifications that can and have been done to these radios. Such as installation of the high/low power switch, installation of the scan switch, etc. . .

Also seeking anyone that has accessories that they would be willing to sell or donate (for tax write off) for these units.

Anyone with information on these units please e-mail me at hhmercer@airmail.net

Thank You

Sgt. Lindsay Hodgdon
Lone Oak Police Department
Lone Oak, TX

Anyone with any information of the AN/PRC-127, I am interested in visiting with you. Anyone with information about the AN/PRC-127 (A), Please let me know what the revision (A) is . . .

5147. ** PacComm PTC-II **

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-04 00:00:00 UTC
From: "Brian K. Short" <ke7gh@primenet.com>
Message-ID: <339595F7.5342@primenet.com>
Source record: 173730

** PacComm PTC-II **

My second-hand (but unused) PacComm PTC-II Multimode DSP Communications Controller arrived and is hooked up. As it was purchased over a year ago and subsequently never used, it had old firmware. I have now loaded BIOS v1.2 and the v2.2 firmware. The upload (or is it download?) went quite smoothly using software available from the SCS web page.

I am quite impressed with this piece of equipment after being disappointed by my last "DSP Multimode" the DSP-2232 several years ago.

The PacComm unit in particular has a very attractive front panel display and case. The greyscale picture on their web page does not do it justice. It is very stylish and compact. (I have pictures on www at http://www.qsl.net/k7on/ptc.htm but a color picture is much needed...)

Anyway, I have been monitoring RTTY and Pactor some today (with FT-1000mp and XPWin -which I STILL need to register) and compared to my PK-232, the Pactor is amazing! I'm even inclined to say that it is far better on Pactor RX than my old P-38. I have not had a chance to evaluate weak/noisy copy on RTTY as yet (the P-38 did quite well), but I hope to next weekend in the ANARTS RTTY contest.

I have 512k memory in the PTC-II and no accessory modems for packet. I'm interested in any accessories others have added?

I have not yet connected the tranceiver interface. Will it work with my FT-1000mp (which has RS-232 input)? Are the frequency UP/DOWN signals just as useful?

One weak point is the year old manual. Is there a newer manual available? Where? (I just like manuals!)

I was reluctant about this equipment based on price, but so far it is my favorite multimode and my favorite DSP communications controller.

I'm not sure why I haven't heard more praise of the PacComm PTC-II anywhere? ** I LIKE IT VERY MUCH!! ** It has a happy home...

Hints? Tips? Ideas? Scheds for Pactor-II?

73, Brian

Hi, Walker. I have owned and operated an Ameritron AL-80A amplifier for the last four years and have not had any problems with the unit. It works exactly as advertised. I am very pleased and would not hesitate to buy another Ameritron amp. Can't speak for others' experiences, just my own.

Theres not much choice. The 920 is dual conversion compared to triple conversion and the list goes on. Play with them, 756 in a land slide.

5150. IC 706 Repeater offset programmer

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-04 00:00:00 UTC
From: jeff@sec.sel.sony.com
Message-ID: <5n49lv$pea@news1.sjc.in.sel.sony.com>
Source record: 173733

I posted about a board that I purchased to automatically program repeater splits in the 706.

I keep forgeting to bring the data sheet to work so that I can post contact info.

Here is what I remember about it.

It consists of a small circuit board with a handfull of components. The major component is a new 8 pin microcontroller the PIC 12C508.

The band plans for 10, 6, and 2 meters are programmed in to the chip.

To activate the function you press the button in the "M" function for the narrow filter.

When you manually tune to a frequency that is in the repeater segment, the radio is programmed into the split mode with the two vfo's set properly.

You must then go out of the narrow filter mode to operate.

You can save your favorite repeaters in memory after setting them up.

It's easier then any other way I've seen.

Three wires connect it to the radio: power, ground, and serial data.

It can be mounted internally or externally (you have to supply a box).

It`s a kit.

Documentation is good.

Cost was ~$35 plus shipping.

I`ll tie a string around my finger so tonight I'll remember the contact info.

I have found just about any hamfest that has somebody selling CDROMs has a couple of choices. I recently bought the "InfoMagic LINUX Developer's Resource" for $12. It contains RedHat 4.0, Slackware 3.1, and Debian 1.2 kernals. Plus X-Windows, and an enormous amount of software and on-line documentation (6 CDs). Installation was simple by making a boot disk from a dos machine. (I prefer the RedHat as it needs only a single boot/install diskette). I now have a cool X-Windows interface, AX.25 on packet radio, Web Server, FTP server, Telnet server, and much much more. Hard to beat that price for all the neat stuff!

Hi John,

It is my understanding (not confirmed!) that with the VI + you can have 2 filters in the first IF, e.g., one CW such as the 218, and the FSK, # 216. (I'm at work, don't have exact #s "in memory.") Only two so you'll havta choose between the 500 Hz or 250 Hz CW filter for the 1st IF.

I plan to have the option 3 upgrade done on mine, go with the FSK filter in the added 2nd slot, and I'll get the really narrow CW selectivity via the 2nd IF when I "need" it. (Right now, the CW capability of the existing radio far exceeds that of the operator! Hope to change that...)

Hope I have this correctly, and hope it helps...

Best 73,
Marty (W7LEJ)
Spokane, WA

5167. TM-V7A Mute, Display Problems

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-04 00:00:00 UTC
From: ken@seemessage.com
Message-ID: <ken-0406971716140001@nas-nh3-16.ix.netcom.com>
Source record: 173750

I purchased, and really love, the Kenwood TM-V7A "cool blue" Dual Band 2m/440 radio. But, two things are driving me crazy about it. The first is that the radio does NOT have a MUTE function, so it's very hard to hear what's going on when both bands are busy at the same time. (Other Kenwood radios handle MUTE with no problem....but this radio doesn't even have a MUTE function at all.) The second problem I have is that the "cool blue" display is very hard to see under certain daylight conditions (sunlight, reflections, glare, etc.)

I called Kenwood Tech Support (310-639-5300) and asked about these problems. They certainly know about the display problem, but I don't think they are hearing enough feedback from disgruntled users about the lack of a MUTE function. Supposedly, I'm told, they DO listen to user feedback. If you own this radio, and are upset by the lack of a MUTE, please call this number and tell them so. I am very much hoping that they will fix this problem and make it possible for early owners of this radio to upgrade inexpensively. But, you must make it known to them that this a real problem.

The guy I spoke with was very nice indeed. ANd, their phone support wasn't bad at all. I left a message saying I wanted to talk to someone about this radio, and they actually called back a few hours later.

If you are upset about the LACK of a MUTE function, please call them.

Thanks,

Ken

Message-ID: <01bc7174$76033d00$a914a5ce@lowly.sps.mot.com>
Source record: 173759

Are there any sites out there with reviews of HF tranceivers? It would be nice to find out the good, the bad, and the ugly of various radios you're likely to see at hamfests. I know I could always look up the QST product reviews, but they don't tell you about problems that show up 2 years after manufacture. Maybe we should all just pick one favorite rig, write it up and link all the reviews to one common web page...

Chris, AA7WD

5177. IC706MKII fan runs too much?

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-04 00:00:00 UTC
From: "F. Feeney" <*spamsaver*_fkf1@cornell.edu>
Message-ID: <5n4411$lpq@newsstand.cit.cornell.edu>
Source record: 173760

hi,

I had the good fortune to pick up one of the new IC706MKII's at the Rochester hamfest this last weekend and it's a dandy radio - however, the fan on mine runs a lot. It comes on naturally enough when I do any transmitting, and in that small a package I expect that to get rid of the heat. But then it keeps on cycling on and off while all I'm doing is receiving. An hour after the last transmission, the fan is running about 50 percent of the time. Is this normal? In the mobile, I'd probably never notice, but in the shack it is a bit annoying. Any other MKII's out there that can compare - or how does this compare to the original.

I don't have too many hours on the rig yet, but I found it pretty easy to use and it does pretty much everything I expected.

Thanks

Kevin, WB2EMS

Message-ID: <01bc7094$00ef8860$531f67cf@jetta.nyquist.com>
Source record: 173845

Hello,

I was active a few years ago but have since gotten way too busy. As such,
I have a decent little HT forsale!

It is a Standard C150 (identical to the US model C158) and was factory
modified to work in US 2m freqs.

Specs and a picture are available at:

http://www.burnabyradio.com/ham/standard/v_ht.html

For the unit, I also have the following:

7.2V 400mAH short battery
7.2V 700mAH tall battery (same as in the picture)
CAW150 lighter plug adapter
CWC150 transformer / battery charger
Full schematic diagram sheet

unfortunately, the manual is in Japanese. However, I contacted Standard
Radio in Niles, IL and they have the manuals (in English, of course!) for
$20 + $3 S/H.

To be honest, I have no idea what the unit is worth.
I'll take best reasonable offer for it! I will also cover COD and shipping
costs.

73,

Yosh

Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment,rec.radio.swap

I have a quantity of 7/8" coaxial cable, mostly Andrews, in various lengths from 25 feet to over 400 feet on length. This cable is either new end pieces off cable spools or used cable that has just been removed from two way sites that are being shut down. No connectors on

any of the cable. Price is $1.50 per foot on short runs, $1.00 per foot on long runs.

This is the cable that has a loss factor of 0.86 db per 100 feet at 400 Mhz. THE GOOD STUFF!! Small rolls can be shipped UPS and larger rolls can be shipped motor freight at a 50% discount rate.

Great for any type installation where you need maximum fire in the wire regardless of frequency. Ideal for VHF, UHF, repeaters, or almost any application. New price on this stuff is about $7.50 per foot.

Bryan W5KFT

I have made arranagements to ship big rolls by motor freight at a 50% discount and short runs can be shipped via UPS

I have an ITT Mackay Marine Portable Lifeboat Transceiver Type 401-A that needs a new home.

It is a rugged, compact, entirely self-contained radiotelegraph transmitter-receiver designed primarily for use on survival craft (read lifeboats) to promote safety of personnel at sea. As built, this equipment provides for communication on the 500kc distress frequency and on the long range 8346kc channel between survival craft and between such craft and rescue vessels or aircraft.

All power required for operation of this radio equipment is provided by a built-in, hand-cranked electric generator.

Unit is waterproof and is built to float after a 20' drop into the sea.

Power from the two cranking handles is applied to an integrated electric generator through a "silent" chain ball-bearing drive with a 72:1 angular speed step-up ratio. Original lubrication normally suffices for the lifetime of the equipment.

RF power losses are minimized in the power amp adnoutput networks by use of silver-plated hardware, teflon antenna feed-through insulator, and high ! variometer wound on a low-loss glass-fibre malamine form.

....
NOTE: Needless to say, this equipment must not be utilized such that it automatically broadcasts false auto-alarm or SOS signals. That would constitute a Federal crime with substantial penalties. The unit would have to be modified for other use, limited only by your imagination and inventiveness. Say...

Field day (they should make a special class for such projects)???
....

The Type 401-A package includes the following items:
a. 401-A transmitter-receiver in canvas cover (the cover is deteriorated after a career at sea).
b. Generator cranking handles stowed within pockets of cover.
c. Four section collapsible mast with antenna wire and rigging stowed within separate, but attached, pocket of cover.
d. Bround braid wound on a spool; one end of wire is secured to the panel while the spool is kept within the case cover.
e. Headphones housed within cover of case, with end of cord permanently secured to the equipment.
f. Spare parts, including the following tubes: 12AT7, 6AQ5, 6U8, 6BJ6, and neon lamp NE51.

g. ORIGINAL OPERATING AND MAINTENANCE MANUAL, which contains:
1. Description.
2. Electrical circuit descriptions.
3. Operating instructions.
4. Maintenance.
5. Electrical parts list.
6. Illustrations/drawings, including 4 tables & 10 drawings.
h. Wall mounting bracket.

This complete package weighs about 60 pounds so UPS shipping costs
are about ???.

PRICE!
I don't know how to price this item so will entertain all offers
received before MIDNIGHT, June 15, 1997.

ANY OFFERS TENDERED SHOULD INCLUDE THE SHIPPING COST
IN THE TOTAL BID, THUS PRECLUDING MISUNDERSTANDINGS.

Hope this once in a lifetime acquisition will make someone the talk of
the local club.

(Sorry, I blew the shipping cost paragraph) and then the BID paragraph!). I guess that's why we are called amateurs... :-)

I have an ITT Mackay Marine Portable Lifeboat Transceiver Type 401-A that needs a new home.

It is a rugged, compact, entirely self-contained radiotelegraph transmitter-receiver designed primarily for use on survival craft (read lifeboats) to promote safety of personnel at sea. As built, this equipment provides for communication on the 500kc distress frequency and on the long range 8346kc channel between survival craft and between such craft and rescue vessels or aircraft.

All power required for operation of this radio equipment is provided by a built-in, hand-cranked electric generator.

Unit is waterproof and is built to float after a 20' drop into the sea.

Power from the two cranking handles is applied to an integrated electric generator through a "silent" chain ball-bearing drive with a 72:1 angular speed step-up ratio. Original lubrication normally suffices for the lifetime of the equipment.

RF power losses are minimized in the power amp adnoutput networks by use of silver-plated hardware, teflon antenna feed-through insulator, and high ! variometer wound on a low-loss glass-fibre malamine form.

From: dgsholar@gte.net
Message-ID: <5n3d4u$3nd$1@news5.gte.net>
Source record: 173856

to cross band repeat do the following:

1. set the freq's like you want them on each band

2. then press [func] and [D] then turn the radio off - you will see a small [L] in the lower right corner of the display

3. then press [moni] and [rpt] and [#] while turning the radio on. (this takes a lot of fingers!! This is a littl tough, took me five tries to get mine to go into this mode.)

You will then see the [L] in the lower right of your display start to flash on and off - once it starts flashing - you then are in cross band repeat mode.

4. To stop crossband repeat - repeat step #3. You will see the [L] stop flashing. This means you are out of Cross band repeat.

5. to unlock your radio after stoping cross band repeat, press [func] then press [d]

IT works for me, just step #3 is sometimes difficult.

Good Luck

Dave

Hi All,

I have a mini dual band wide band receive HT FS. I am asking $225. Works and looks like new (no scratches), Mars/Cap mod done.Includes box, strap, original 3" duck.
The specs are:

The Standard C508A

(a) 280 mW transmit power
(b) 60 memories; stores frequency, offset and CTCSS tones
(c) RX 100-180, 340-400 & 400-480 MHz
(d) TX Amateur bands 2M-70cm
(e) Store 2 M & 70 cm frequency in one memory
(f) Operates from 3 volts "2-AA" - Lasts weeks!
(g) Unsurpassed 0.158 micro volts sensitivity
(h) CTCSS Encode & Decode
(i) Scan 1 MHz, full range, memory, block, CTCSS
(j) Scan priority memory channels
(k) Scan pause, busy, hold
(l) One call channel
(m) Dual watch
(n) PTT lock
(o) One touch squelch-off button
(p) Battery save mode
(q) Automatic power off
(r) Rotary channel selection
(s) Keyboard lock
(t) Unsurpassed intermod rejection
(u) 1750 tone burst
(v) Dimensions: 3.35" (H) x 2.28" (W) x 0.98" (D)
(w) Weight with battery 5.65 oz

> handheld.

It is a nice rig. A pain to program, though. If you bought the rig used, do you have the 10M manual, or the one for the 6? If you have the 10M one, call Azden; they'll send you the right one (got mine free). Azden, when they first came out with the AZ61 didn't have the correct manuals, so they shipped the HT's with the manual for the 10M unit.
Also looking for mods; please post to the group here. Have checked the various mod pages, and found nothing.
Btw, does anyone know of a headset that works with the AZ61?

I don't know where you are, but 'your' bttery dealer isn't yours
at all, at all. You are his. The dealer we use in Tulsa, he would
do the tests free, and has several times.

Also he explained that to me, because a small lamp was left on, and ran the batt down.

Old batts were classed in total power storage. new batts are classed in cranking power.

New batts are less expensive to make, but do only the one job they are made for. If you are willing to pay more for deep-draft batteries,

you can have the old style. They require more service, and may not last as long.

That's what I heard.
Hope it helps.

5211. Battery drain, first hand

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-04 00:00:00 UTC
From: ham@w3eax.umd.edu
Message-ID: <5n3sct$i4c@dailyplanet.wam.umd.edu>
Source record: 173871

OK, OK, I know I commented on the radio killing the battery,
so here's some first-hand evidence.

Six month old die-hard in a Mitsubishi Expo.

Radio left on at (verified) 380 mA drain instead
of normal 90 mA drain.

Battery was virtually stone-dead after four days of
not being driven.

96 hours @ 380 mA = 37.5 AH.

I have lead-acid deep cycle gel cells that do better
than that in a case 1/2 the size. Of course, they
can't start a car engine.

Well, I got to play with the FT 920 belonging to my friend, KB6VFC, and HF and 6 meter kind of guy.

He bought the radio two weeks ago, but just got it back from Yaesu, had a solder blob on a circuit board that put the rig into transmit constantly. That happens. They fixed is quickly and honestly. That is to their credit.

The radio itself is designed to look and feel like the 1000 series. However, it affords IF filtering only like the 890 / 900 series with the addition of an audio DSP. A nontrivial audio DSP, works nicely, but not in the AGC loop, the same tradeoff made in the external DSP's. AGC pumping from an adjacent strong signal will reduce its effectiveness.

Only a single IF filter is afforded in the SSB and CW modes. 8 poles, monolithic design, and way overpriced. Oh well. The Yaesu IF crystal filters will do a good job though. The DSP unit needs the help to prevent the AGC pumping in CW.

The audio DSP is designed to be controlled very cleverly. It allows the user to take a very small audio bandwidth and move it across the IF bandpass with "high cut" and "low cut" audio controls linked together at min bandwidth. You have to use it to appreciate it. Nicely done.

The DSP noise reduction is not very impressive, and it does introduce a "rolling" in the audio, which I consider unpleasant. It is not bad, I just don't like it. It seems to cut the very high response in the audio range too. I suppose that makes sense, but I like fuller range audio. The noise is not completely eliminated, just a low rumble remains. It can "help" to receive the audio from a very weak station, but I could not find a situation where it made the difference between copy and no copy. It did seem to reduce ear fatigue on CW.

The audio from the speaker was adequate, but was the standard restricted sounding SSB that comes from many radios. I think the FT 1000 sounds a lot nicer with its internal speaker, broader range.

Overall, a nice upgrade to the 900 series radios, making it a very good all around rig for the shack. I don't confuse this radio with the 1000, for me, it is not in the same league.

>
> Thankyou,

Generally, this would be done with a small beam (Yagi) antenna
and a radio with a signal strength meter. An attenuator,
adjustable, would also be required. It takes a little practice,
but you can home in on a signal in an hour or so if transmissions
are frequent, especially if the distances are short. You can
practice by homing in on a base station radio that is used
frequently, such as a police dispatcher. This is an active
hobby within the amateur radio hobby. For example, 73 Amateur
Radio has a column in every magazine on this topic. Visit
your local amateur radio store and discuss your problem.

A small beam should cost $50 or so, and an attenuator $100
or less. A scanner with a meter might cost $250, if you
don't have a radio with a meter. You can use a radio
without a meter, but it is harder.

The hardest part is chasing it down to the last 200 feet or
so, but there are some tricks to help, such as listening
to the second or third harmonic instead of the fundamental
frequency.

You might be able to get some local hams who are interested
in DF (Direction Finding) to help you, as a kind of game
for them.

Good luck,

Richard

For sale:
Kenwood TS-50, New price @ AES=$1019 -- Asking $750
Kenwood AT-50 Antenna tuner, New Price @ AES=$329 -- Asking $245
Kenwood YK107C CW Filter, New price=$129 -- Asking $90

All in excellent condition, no scratches or marks. Original boxes and manuals. Purchased new 3/94 from AES. The AT-50 was used only about 30 minutes, I ended up using an SGC tuner instead, because of the type of antenna. It
has served me well, but I no longer need a small radio.
I'll pay COD shipping.

I know this is a radio group but Hams have computers and printers so
here goes. I have a Hewlett Packard LaserJet IIP printer for sale. I
purchased it from an estate a few weeks ago and have decided to keep my
Epson dot matrix printer and sell the HP. It has:

New toner cartridge(less than 10 copies)
All documentation and manuals
Cable
2 Mb Ram board installed
Almost new and works great!

I will ship in the US for $350.00

If you are interested EMail at this address or call the number below.
Thanks.

If you want to physically find the radio, the DF method described is about it. If you want to know who is playing around on the radio, assuming a currently known radio, look into an ANI (Automatic Number Identification). This is a neat little thing that many business use where in the radio transmits some form of ident each time it is keyed, from something as basic as Touch Tones to modern Data bursts. The base station has a decoder that displays what unit number (specific radio) keys up each time. If you are using some modern two ways, MOTOROLA, the data burst option may already be installed and the radios would only need to be reprogrammed, and the decoder purchased. If not, you will probably find this option very expensive.

Tom

In the USA the prices are $1920 for the Icom 756 and $1750 for the
Yaesu FT-920. When you add the AM filter and FM option the the Yaesu
FT-920 then both radios are about the same price!

Marc --
While the coffee cup, pastrami on rye, and xyl are good ideas,
I'm particularly fond of my MFJ SWR Analyzer -- it doubles
as a grid-dipper, and allows me to test feed line, antennas,
antenna tuners, tuned circuits, works as a frequency counter,
signal injector, vswr meter, etc. Probably the best $150
I've ever spent on amateur radio "test" gear. It's as valuable
in the car as at home to boot!

5233. Re: TS-520S Question

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-05 00:00:00 UTC
From: Joe <joentam@transend.com.tw>
Message-ID: <339724E0.2822@transend.com.tw>
Source record: 173680

Hi Brian,
Having owned several TS-520S radio's over the years, I have found
the "reduce the carrier" approach works fairly well for CW power
reduction. However, for SSB, backing off the microphone gain
leaves something to be desired -- I find that this seldom definitively
limits the radio's output. The problem with the mic gain reduction
is that there is no ALC action -- if you happen to close-talk the
mic, your output increases. If you back off of the mic, your
output slides to nothing. Running with the processor on makes
matters worse, as does running with a preamplified microphone.

Instead, I suggest using a 9V battery and potentiometer to
provide a constant voltage to the ALC connector to the back
panel of the radio.

This is the same principle used when running a linear amplifier
to prevent overdriving the amp (flat-topping the signal, splatter,
etc). The voltage on the ALC input reduces the power output.
Best of all, this works in both SSB and CW modes -- you can "mark"
the potentiometer for different power output levels and quickly
go from QRPp to full barefoot output without changing mic gain,
carrier, processor, or microphone preamplifier settings.

73,
Joe

YAESU 901 DM (deluxe Model) HF 160/80/40/20/15/10a/10b/10c/10d/WWV with 11 meter mod! 100W.
SSB/FM/AM/CW/FSK.
Bright red LED Frequency display.
All solid state plug in modular boards with (2) tube, smooth finals. Tuner and finals match wide range of Antennas.
VOX. Keyer. APF CW filter. SSB notch filters. Noise Blanker. Plugs right in to AC or easy to wire for DC (AC/DC internal). Operation manual included!
Easy connections on back for patch or transverters unit (6m,2m,440).
Save big time because this highly sensitive rig has a built in AC or DC power supply, Tuner, Keyer,VOX, Current meter, SSB and CW filters, 11 mod, and optional transverters. Unbeliveable nice signal and recieve charateristics. After all, it's a YAESU. All for only $429 plus $25 shipping UPS to your front door. If you prefer COD add $49 for shipping.

The only thing I know of that would refer to what you're asking for is
MiniLinux by sp2ong.
It can be downloaded from ftp.li.ncu.edu.pl from the directory
/pub/hamradio or something.
It works out of the box and gets installed on a msdos partition.

Source record: 173687

I just purchased an Alinco DJ-S41, mainly to use for crossbanding through my Yaesu 8000R. It works great, but I was wondering if anyone knows how much power it runs in the low-power setting. The manual does not say, but judging from the amount of current drawn from the batteries versus what is draw in the high power position (340 millwatts), I would estimate the low-power position to be about 100 millwatts.

I am using alkaline batteries now; don't know how long they will last. I may go to Nicads. Has anyone had any experience with battery life or other batteries?. I believe some company makes a rechargeable alkaline.

I am looking to buy a 2 meter HT with the following requirements
1) DTMF keypad
2) Very small size.
3) 5 watts out capable.
4) A few scratches OK but not "beat up"
5) I have $150.00 to spend or a little more if radio is very new.
6) Must have charger with the 5 watt battery.
7) at least 20 memories

Idea radios are Yaesu FT-10R, Yaesu FT11, Kenwood TH22AT, TH28A
ICOM IC-T22A , IC2sat (I think that is the little ICOM they used to make)
Anything similar to these would be a candidate.

The Kenwood TS-520S service manual has a mod for this. It is VERY simple! Remove L4 (150uH) from the FINAL unit. That's it, 50w. I suspect that if a little more than 50w is needed, one could use an inductor up to 150uH, say 100uH for 75w.

On this 'dual' vs 'triple' conversion comment, look at Kachina's web-site and theory of operation discussion of thier new computer-faced ham transceiver. The author generally sounds intelligent, and praises the benefits of fewer, not more stages of conversion when possible. Quality filtering and quality oscillators are a substitute for more conversion stages, seems to me. Yaesu is a radio manufacturer, not a conglomerate producer of consumer goods. Their stuff consistently shows leadership and good performance. The FT-1000XX's are still the best overall receiver sections ever tested at ARRL Labs, to my recollection and I wonder why one would buy another piece of gear for about the same price if the specs. of interest were simply not as good when analyzed comprehensively and carefully, as I trust is done at ARRL. Of course, different rigs tend to excel at different modes, and the world has few easy answers. Ten-tec for CW, maybe the Kachina for computer-control via modem, SGC's new "pocket" xcvr for backpacking, etc. Esthetics and nostalgia are important for OM's too.

There is a aftermarket item I saw taht slots into on of the filter slots and does automatic repeater offsets. I can't find the sheet right now but if you are interested email me and once I find the spec sheet i will email it off.

Source record: 173714

Hi,

I am trying to tune up 3 motorola mitrek radios in the ham band.

I have bought crystals for the channel elements and know that if the freq. changes significantly then at least one cap and one inductor need to be changed in the channel element to get the crystal to oscillate.

I believe this is called "compensating"

Can anyone prescribe what to change in the channel elements to work?

Here is what I have:

Original New
Channel Freq.
Freq.

168MHz 145MHz Both Tx and RX kxn1088 and kxn1086
460MHz 440MHz Same as VHF
46MHz 50MHz Kxn1085 and 1087 I think.

Any help would be greatly appreciated.

Thanks,

Scott Sidener N0WFL

Brian, I have a ft1000mp and PtcII.
It works 100% on pactor/SSTV etc.
The ft1000mp is an rs232 i/f.
The output from the ptcII is TTL (or was it the other way round)
Anyway you will need an rs232/ttl convertor to get the control of the
ft1000mp with a ptcII
It cost me about 12 pounds uk to build a convertor.
Otherwise no problems

I've been having serious problems with the download of a file to the HT50. I can upload from the HT all day, but can't upload from the PC to the HT. I've been on the phone several times to both Yaesu and RT systems, but so far no luck.

Anyway, I ended up in European mode (144 - 146 mhz transmit only). In a converstion with Yaesu, they told me to unsolder the jumper at "1". It's under the keyboard on the left center. That puts the HT in USA mode. It made me wonder, what do the other currently unsoldered jumpers do? Anyone know?

Finally, any other worthwhile mods to this great little HT? I'll be picking up a better antenna at the Arlington HAMCOM on 6/7. Any suggestions?

The original text goes as follows:

I've been having lots of trouble with the RT Systems software for my HT50. I've been on the phone several times with RT and Yaesu. They've tried to help, but no luck. I can send from the HT to the PC, but any download to the HT hangs at 11% or so. Anyway, in one of the hangs reset my HT to Eurpoean mode (transmit 144 - 146 only). When I called Yaesu, they said to cut the solder jumper on number 1 (left side under the keyboard). Sure enough that fixed that problem, but I just discovered the item below!!

Also, when looking at unsoldered jumpers 2 - 4, I wondered what soldering them would do. Anyone know? Anyother worthwhile mods available? I'll be picking up a better antenna at the Arlington Texas HAMCOM on 6/7. Is there a good one out there ?

Had one in 1996...got rid of it!
Some of it's features like having to input "LETTERS" from the key pad
for the CW keyer are bad.
There's also phasing noise using the NR, and complaints on phasing noise
on TX that we have reported to Icom.

FT920..much better!
And nearly half the price over here!
Geoff :-))))

UPDATE: 6/6/97.................

A 50MHz report for Yaesu UK Ltd: =

THE NEW FT920!

Here is Yaesu's new Baby! The FT920, sister to the famous FT1000MP, its built like a
tank, and performs superbly with the AF DSP.

Where do we start with a new Radio? we have to look at what is offered in terms of new
Technology! The Yaesu FT920 is new "HAT", a new radio, new techniques!
Mr Barry Cooper of Yaesu UK Ltd asked me to "give it the works" on 50MHz. So here
are a few of my findings! =

OPERATIONAL FEATURES!
I must say that on unpacking the Radio I was amazed at it's size, it's about the same size
as an FT1000MP and "really" feels like a radio. It operates on DC not Mains AC. so
you need a 20amp PSU.
Some months ago I had sold my trusty FT990 and had regretted doing so, however, the
FT920 has put the smile back on my face!
The front panel layout is well thought out with a dual bandstacking keyboard available,
twin VFO contols grace the front panel, but note! these are for split and memory
operations and not FULL "twin receivers".

DSP Unit!

(My comments on this have been noted to Yaesu UK Ltd and also to Icom UK Ltd, on
their IC 756, dedicated 50MHz users, and there's THOUSANDS of us, require a radio
that has two receivers so 28MHz AND 50MHz can be monitored at the same time, I
hope one day manufacturers will come up with such a radio!)

I won't go into the HF side too much as I was asked for a 50MHz opinion.
IT DOES NOT DO DUAL RECEIVE! but does dual watch, ie ONE receiver!
Dual watch is fitted and the time delay can be varied, this is quite useful, as instead of
scanning memories for say 28.885 and monitoring 50.150 etc, both vfo's

can be
programmed and "flipped" between 3 to 15 seconds. The time delay is set via a menu,
yes! the FT920 has the new technology menu system like other radios, a menu system
that usually contains sub menu's and further sub/sub menu's.(sometimes known as a
pain!)
Not so with the FT920 though, it has only ONE menu that controls ALL functions of the
radio, 73 in all! that's a nice feature. I, like many, cannot remember all the sub/sub menu
settings, and so just one menu is a much better idea.

The FT920 supports all modes, however I was surprised to see that the FM unit is
optional. (see my comments later on the price structure).
Despite the rumours that the Digital Voice recorder is optional the news is that it is a
standard feature (and that's worth 200 UKP) and boasts 2 "8" second memories, and 2
"4" second memories, (it says in the manual 16 seconds each!), Also the DVR can be
left running in the receive condition, when put into the play condition it will play the last
16 seconds of recorded receive audio, this is the same as the DVS2 that was an option
with the FT650 and FT990/FT1000 radio's, the CW memory keyer is also standard and
also boasts 6 memories, four 50 character and two 20 character. Both the voice recorder
and CW keyer are controlled by one set of switches, a PLAY and a RECORD. (ie PLAY
1/2/3/4)
The CW Memory keyer is a "paddle/key" input device, the same as a "Super Keyer"(reg TM) This is much better to input data rather than using a keypad like the
IC756. Weights and ratios can again be adjusted via the on screen menu.

The receiver front end has a Jfet and a Mosfet device, these can be swapped through
the menu system if required, so that the Jfet device can be used at 50MHz instead of it's
allocated bands of 160mtrs to 12mtrs and increasing dynamic range and less sensitivity.
The 28/50MHz section incorporates the Mosfet RF stage. (lower noise figure)
Three levels of attenuation are included of 6, 12 and 18db. =

THE NOISE BLANKER!
The noise blanker in this radio does actually work, it is also

adjustable, however, there is
a problem in this area especially noticed on HF.
Switching on the noise blanker with the audio gain turned off strange
burbbles and
whistles can be heard very weakly in the loudspeaker, using headphones
really shows
this up, there seems to be some kind of leakage/breakthrough of
frequencies above and
below the dial readout frequency. =

This is NOT the usual Noise blanker overload problem and it was noted on
ALL HF
bands.
Removing the antenna cures the problem, and note DSP was not turned on.
It is very
weak but annoying, and maybe also due to the fact that my FT920 was one
of the first
radio's out.
There is no sign of this problem on 50MHz.

DSP/NOTCH FILTERING/NOISE REDUCTION:
I was impressed here! wow! The Auto Notch filter is superb, I noted a
station on 50.125
and had a computer birdy on top of the station at S5, hitting the auto
notch REMOVED
the computer junk and left a crisp clean signal. I could not believe the
effect it had, but it
is true! BTW don't try using the auto notch on CW otherwise the station
will disappear!
DSP high/low cut was also very effective in producing stations out of
the noise,
something we all dream of. The DSP operates at 33MIPS and is Audio DSP.
I have limited circuit information on the DSP section and note that it
is built around a 120
pin LSI, I just hope that this IC never blows as that would be a major
job to replace!
The noise reduction system seems to be much better than the IC756 that I
tried, on the
Icom a type of "phasing" noise was noticed on the receiver, this was not
so on the
FT920.

TRANSVERTERS?
The radio does not offer any dedicated transverter ports, (ie any low
level TX), but! it
offers something quite unique! If the TX LED is pushed it goes into a
low power mode
offering a maximum of 10 watts which can be reduced with the power
control to Zero!
Another way of lowering the output for transverting is to initiate the
power level settings

in the menu, the levels at antenna ports can be adjusted to output 10,
50 or 100w,
ensuring safety for your transverter.
FM scanning steps can be adjusted from 0 to 100kHz. There's also
repeater shift for the
VHF bods! =

MEMORIES!
The radio has 99 standard memories plus 5 "Quick" memories, and 10 split
memories
and a call memory for each band.
Seven characters can be added to name each memory. =

LINEAR TUNER!
This is a first from Yaesu! a "Linear Amplifier Tuning Device". Hit the
"ENT" key
when in menu # 52 and the FT920 emits a tuning pulsed signal, this pulse
can be adjusted
in frequency and timing upto 60 seconds. Very useful! =

VOX OPERATION:
The radio has vox, however, there is no indication to let you know that
vox is selected!
An LED needs fitting or the display should indicate this!!!!!! =

PRICE STRUCTURE:
My personal point of view is that this radio is under priced compared
with other radio's
of it's class, it is not an "added to FT1000MP" it is a dedicated made
machine offering
superb craftsmanship and technology! =

OPRATIONAL ON AIR TESTS:
The tailormade voice facilities that are offered (DSP audio tx).
There are 4 levels of TX DSP, some are broadcast quality and some are
punchy contest
quality, it depends on your voice characteristics which will suite you.
You can monitor the
audio DSP via the radios own "MONI" function and headphones.
I have worked 52 Countries on both CW and SSB on 50MHz since having the
radio with
very good reports during the past weeks, including Country #158 SU1ER,
others
included JY9QJ, OD5SB and 4X1IF which are all over the 3500kms distance.
Nobody had any adverse comments on the signal (apart from my voice
characteristics!).
The receiver handles well, local signals in GJ were loud clean and
narrow, however, local
stations only run a max of 100 watts but considering GJ is only 45
square miles signals
were endstopping with no intermod problems noticed.
Several stations in Europe were excessivly "wide", and I'm sure that was

their non
linearity at their end!
On 7MHz the receiver showed no major intermod problems and copied JT at S5 when
other G's were giving 5/1 reports, the antenna used was a 120ft long wire sloper poised
at 100ft.
The antenna tuner works on Rx as well as TX although this has to be initiated via the on
line menu and not as the instruction books says (default).
CTCSS is standard so you can access your local repeater. (fit the FM board first!). VHF
repeater shift is included and adjustable up to 5MHz through the menu.

Different power levels can be set at the two antenna ports by the menu.
Vox is included and also is a speech processor which worked quite well in our tests on
the air.
Scanning speed was good with adjustable time from 1 to 100ms per step. =

FREQUENCY COVERAGE:
The 50MHz section covers 48 to 54MHz, I'm currently in touch with Yaesu to see if this
can be expanded to 30 to 54MHz, I feel sure it can as the IF is 68MHz. =

CONCLUSIONS!
This radio is undoubtably the best 50MHz radio I have ever operated, it will take pride
place in my shack and the FT736 and FT650 will now be used as backup radios!
Yaesu have certainly produced a radio that is a delight to operate.
The instruction book has many errors but these have reported to Yaesu, that and the
noise blanker problem are THE ONLY faults I could find so far :-)

Yaesu UK Ltd Price =A31699.00. Ex Taxes ONLY =A31250.00 plus carriage! =

FM Unit =A349.00 inc VAT
13.8 Volt ONLY. No mains Version available.
Mosfet PA finals.

I am looking for information on the least expensive, but effective method of tracking
transmissions in the UHF 461 -465mhz band. The company I am with has a serious problem with employees with issued radios or former employees suspected of stealing radios, of interfereing with transmissions by playing on our frequencies. I would like to find a method of tracking these radios to reclaim stolen ones,or to remove them from those soon to be former employees. Please E-Mail me with any information.

Thankyou,

5279. HOW TO: Icom 2SRA Discriminator Tap Mod

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-05 00:00:00 UTC
From: smooth@bu.edu
Message-ID: <5n5037$8m3@news.bu.edu>
Source record: 173765

IC2SRA Summary: Discriminator output tap

Modification instructions for the Icom IC 2SRA Handheld

Joe Grand
smooth@bu.edu
May 22, 1997

Abstract

The ICOM 2SRA is a 144MHz FM transciever and wideband (50-905MHz) receiver HT, ideal for mobile communications and ham radio. With the increasing popularity in digital data monitoring, using protocols such as POCSAG, FLEX, and MDT4800 for Mobile Data Terminals, audio signals from the speaker output are not the most reliable. Modification of the radio to get a tap from the discriminator output will let us receive the best quality digital signal, with no audio filtering and amplification (which will "massage" the signal for the best quality within the voice range).

Schematics and system block diagrams are supplied with the Icom 2SRA. By using these, I could find which IC was the FM IF and tap the output signal before it went to the filter circuitry. I added a tiny external SPDT switch to switch the "Speaker Out" jack between standard speaker output and discriminator output. This leads to hardly any external mess and keeps the radio looking nice, with minimal destruction to the internals of the radio. The modification I performed consisted of disassembling the entire radio, desoldering a board, drilling holes in the PC board, and resoldering connections. If done correctly the first time, you will be able to skip a lot of the heartache I had to deal with (which is part of experimentation, of course). The modification can be simplified by not adding an external switch, and just bringing out two wires (discriminator output and ground) to connect to your POCSAG decoder, etc.

Upon examination of the block diagram, I found that the best place to tap the discriminator output was after the Motorola MC3372 Low Power Narrowband FM IF.
This chip can "perform single conversion FM reception and consists of an oscillator, mixer, limiting IF amplifier, quadrature discriminator, active filter, squelch switch, and meter drive circuitry." Pin 9 of this IC is the "recovered audio". This is what you want.

Modification

Disassembly of the radio is a time consuming and delicate process. Be prepared

to spend quite a few hours (if not days) working on this project, as you don't want to screw up a perfectly good (not to mention expensive) radio. The

modification is well worth it, though, and will make your data reception quality magnitudes better.

1. Remove all screws from external casing and pull apart

2. Take out the small PC board at the bottom of the circuit. This UT-63 Tone Squelch Unit comes standard in the U.S. versions of the radio, but is optional for other countries.

3. You will see two metal boxes in the center, these are the transmit (TX) and receive (RX) modules. They are removable to keep the rest of the radio circuit modular and so a technician could easily replace a faulty unit or convert a 2-meter (144MHz) rig into a 440MHz rig. Disconnect both boxes from the connectors (they are screwed together). Take off the screws so you have two separate modules.

4. The MC3372 IC is inside the receiver module (the top one). It is a 16-pin SOIC package. Peel off the gold tape and pop off the cover.

5. If you are going to mount an external switch to switch between standard speaker output and the discriminator output, be prepared. The easiest thing to do would be to solder a piece of wirewrap wire to pin 9 of the MC3372, drill a hole in the case, and pull the wire through. This is simple but messy, unstable, and not recommended.

6. The next steps involve finding the traces on the PC board that go to the "Speaker Out" jack. Using a multimeter, find which pad on the PC board nearest the jacks (Jack PCB) is connected to the tip of the "Speaker Out" jack. The tip is the speaker output, the middle is for microphone input, and the sleeve is ground. Once you've found the pad (it is a fairly large one), mark it with a permanent marker so you don't forget where it is.

7. Look towards the bottom of the PCB, you will see a single row of solder pads. Find which one of these is connected to the pad you just found in step 7. If you look on the schematics, you see that the "Speaker Out" jack is connected to another board via an interconnect, which is connected to the audio filtering circuitry. What we are going to do is cut the trace before it gets to the speaker jack, so we can connect our switch. I believe the pad you want should be the 5th one from the left, but double-check on your own.

8. Once you are SURE that you have the right pad, you need to cut the trace that connects it to the pad in step 7. Unfortunately, this trace is on the UNDERSIDE of the PC board and requires desoldering and even more disassembly of your radio. If you do this right the first time, you won't need to go underneath and can leave the rest of the radio intact. Using a very small drill bit (I used a small hobbyists handheld drill), drill above and below the wire soldered to the pad. This way, you free the wire from connecting to the "Speaker Out" jack. Use an X-Acto knife to make sure no traces are touching each other, and use the multimeter to double-check that the connection has been severed.

9. Now you need to solder the connections to your small SPDT switch. Using wirewrap wire, you need to solder to three points:

o The wire you just drilled around in step 9 connects to the middle terminal of the switch.
o Pin 9 of the MC3372 connects to the left (or right) terminal of the switch.
o The pad from step 7 connects to the right (or left) terminal of the switch.

10. Plug the TX and RX modules back into the radio, connect the AC adapter, and turn the radio on. If everything has gone right, the audio output (both through the internal speaker and the "Speaker Out" jack) will work only with the switch in one position. When you switch to the other position, you should only hear a faint hiss. Discriminator output is unfiltered and unamplified, and the signal is usually 800mV - 1V P-P. Volume adjustments and squelch do not work with the discriminator output.

11. If something isn't working right, go back and check all the connections and cuts you made. My modification did not work at first, and as mentioned above, I had to disassemble the rest of the radio to get to the underside of the Jack PCB. I am not going to go into specifics, since its practically impossible to describe step by step. My problem turned out to be a shorted connection between pins 4 and 5 where I drilled through the pad. Be very careful if you have to take the whole radio apart and make sure you don't lose any parts or stress the flexible interconnect cables, and don't forget how to put it all back together.

12. If your radio behaves as expected, you are at the final stage. I used a small amount of Epoxy to mount the switch to the left side of the radio (the side WITHOUT the "transmit" and "function" buttons).

13. Mark and cut (using a Dremel tool) the other half of the case where necessary - in order for the switch to fit snugly.

14. Double-check that it all works correctly and screw everything back together. Depending on your switch type, you might need to protect the metal contacts with a dab of Epoxy and/or electrical tape to keep them from shorting against the inside of the metal case.

15. Close up the radio and hope for the best!

If you are unsure of anything, feel free to contact smooth@bu.edu. I take no responsibility if you destroy your radio. I am assuming you can read schematics and follow block diagrams. The step by step above is to be used as a guideline, and not taken as gospel. This modification does work, though, and if you do it right you will be very happy.

Adios. -j

I started playing with linux since Linus first offered it for ftp and I
have been a devotee ever since, the way it has advanced still amazes me.
I couldn't see any other outfit putting AX25 into their Operating
System.
Like you I do everything on a linux machine, work and play. The
dosemu(lator) and Wabi and Wine allows me to handle the EXCEL, Word6 and
PowerPoint stuff I get thrown at me. All this with no rebooting, all my
other stuff like X3270 via ppp into our Corporate mainframe and pdf docs
work fine.
Regards

I don't suppose anyone knows of a program/kernel/etc. that will
connect to a Netware 2.12 server? (I know about ncpfs but it appears
to only support NW3 and greater)

Is Wine now reliable? I've got a copy on a Yggdrasil CD set I bought
at Dayton last year but it warns in many places of instabilities in
Wine. Right now, I'm planning on simply setting aside 25% of my hard
drive for a DOS/Win3.11 partition. "lodlin" works great, allowing
easy switching between OSs, especially with the DOS partition mounted
on the Linux side too.

Depending on your operating preferences and the features on your rig
I would suggest the following:

1) a high quality operating chair (you're gonna spend HOURS in it!)
I use a Herman Miller Ergon chair and a straight back secretary's
chair as a back-up (switch chairs every few hours... different
pressure points and all that, your know).
2) Good lighting
3) external electronic keyer ... I like the CMOS Super Keyer, myself
4) good quality keyer paddle
5) headset with a boom microphone (and a foot switch)
6) packet or multimode controller (for PacketCluster, digital modes, etc0
- and a computer, as others have already noted
- for DX cluster, you'll need a 2m xcvr and antenna as well
7) a VOM, soldering iron, tools, etc.
8) an EXTERNAL speaker ... very nice when compared to internal units!
9) good ham software for your computer (logging, propagation, etc)
10) a file cabinet - for operating manuals, QSLs, etc, etc, etc
11) a bookshelf for all your ham periodicals and books
12) an intercom - so the XYL can call you to dinner ;-)

Cheers,
Sandy - W7BX
slay@netcom.com

: > Other than your primary transmitter/receiver/transceiver, what is the
: > most important piece of equipment in your shack? If you had to

: This is what I've received via e-mail so far. Any other opinions?

: 1) Antenna (of course :-)
: 2) Antenna tuner
: 3) SWR/Wattmeter
: 4) Dummy load
: 5) Headphones
: 6) Clock
: 7) Linear

: Not mentioned: tape recorder, freq counter, electronic keyer, map, etc.

Hi

Anyone out there in radioland with a 440 R/S HTX-404 notice that the receiver takes up to a second to recover from transmitting when sending a CTCSS tone? My two-meter HTX-202 recovers within 100 milliseconds or so.

It's irritating when you miss the first couple of characters of a repeater ID because your HT is still transmitting when you let up on the PTT...and no, this problem doesn't have anything to do with the Ar (autoreply) menu setting or any other accessible firmware function.

The R/S technical helpline couldn't answer my question. They suggested it was due to the repeater squelchtail. (I didn't mention to them I was testing with a dummy load).

Anyone???

5299. Problem with my new IC-706MKII (blown receiver front end ???)

Newsgroup: rec.radio.amateur.equipment
Date: 1997-06-06 00:00:00 UTC
From: Joe Fitter BV/N0IAT <joentam@transend.com.tw>
Message-ID: <33971CFF.581D@transend.com.tw>
Source record: 173587

Well...after 3 weeks of use, I've managed to toast my new Icom
706 MK2 transceiver. I purchased it at Dayton '97 after selling
my original Icom 706 (which, despite the poor out of band receive
sensitivity, noisy fan, lower power on 2 meters, and only one
optional crystal filter) worked sans failure for the past year.

I just "hadta havit".

Like the predecessor, IC 706, I was told at Dayton that the
service manual for the Icom 706MK2 is not yet
available. Further, I was unable to find a schematic
within the owners manual (could I have missed it and thrown it
away by accident)?

My problem is similar to a common failure reported on the IC-706.
Apparently, I have blown a diode or transistor in the front end of the
HF side of the radio. Now, HF and Six meter sensitivity is way
way down. I was using the radio in the car -- using a
homebrew HF+6 meter antenna on the rear bumper. The 2M antenna is
a "Larsen" 5/8 wave NMO antenna mounted in the "front center" of the
roof. VSWR at Fo was 1.2:1 or better on both antennas. Horizontal
spacing of the antennas is at least 6 feet.

After completing some tests on 2M FM, I switched back to HF and noticed
the receive sensitivity (even background noise)
was down severely. Thinking this was my antenna system, I removed
the radio and confirmed my findings on the bench. Now, HF
sensitivity is on the order of 3+ microvolts. The manual states
it should be .25 microvolts or better. Something has been
damaged -- presumably by my 2 M FM transmittions at 20 watts
out.

Anyone have a similar problem? Please email any advice, or,
if you have a service manual !!!

thanks,
Joe N0IAT

And for $275 you can have all of the modern woes of poor squelch control, terrible intermod/out of band rejection, lousy audio, not enough speaker drive and more.

In defense of the 27, it is one of the most rock solid user radios out there, and can still be picked up for around $100.

There is no reasonable way to expand the channels, but e-mail me if you would like wider recieve coverage, more power out, internal 110V P.S., etc.

BTW, Dale,

As good as you guys are at AES, I think it was more fun when we got to actually open up these radios w/o having you tear our reciepts in half.

If memory serves, what you have are GE MSTR EXEC II series...one
standard
and the other is the IMTS version....Best to use one radio as the rptr.
They are 60 watt models (the 5 in 56) and are in the 150-174 range (the
66 at the end) but they do tune to 2mtrs...
I'll see what I have in my docs on those models...

Hello, I was wondering if anyone had the service manual for the TS-830S and would be willing to send me a copy. It would be very appreciated, and I will cover all expenses. Also if anyone has the mod to give the 830 a 7 digit readout (someone told me there was one) I would very much appreciate it also. Thank you for reading.

You're close, the specification sheet for the Alinco DJ-S41T says it's 50mW.

I'm using the Rayovac Renewal alkaline batteries. After a day's usage, I just put them on the charger for a short time and they're ready for the next day. Unlike Nicads, there's no "memory" on the Renewal Alkaline Batteries. In fact, the Rayovac batteries will last longer if you charge then after each use.

I'm not sure what the limit of the Rayovac batteries is; they were still going strong after 2 days of usage when I went camping. All other times, I'd charge then the night after I used them.

I haven't had my Alinco DJ-S41T for too long, but I've had my GPS for about 1.5 years. It's still using the same set of Rayovac Renewal Batteries.

If you care for them properly, Nicads will last longer than the Rayovacs; however you must fully discharge a Nicad BEFORE you recharge it. If you don't do that, the Nicads will grow weak and not hold as great a charge. This is known as the "memory" problem with Nicads. I've quit using the Nicads and switched to the Rayovacs to avoid this problem.

The Rayovac Renewal batteries cost about 2x to 3x the non-rechargeable alkaline batteries. After a few sets of throw-away batteries, the Renewal Batteries are cheaper.

>MUTE function at all.) The second problem I have is that the "cool blue"
>display is very hard to see under certain daylight conditions (sunlight,
>reflections, glare, etc.)

For what it's worth, I've found the display in the TM-V7A to be *easier* to read in bright lighting conditions than on my old TM-732, mainly because of the increased size of the readout. I did install the control head tilted up so that when I look down at it from the driver's seat, I'm seeing the display nearly head on, and that undoubtedly helps.

A while ago I was reading through a letter similar to this one
and thinking to myself yeah right. Making thousands of dollars
off
of a $5 investment, no way but after reading several I decided
to
give it a try and believe me I've never looked back. I figured
what have I to lose but a couple of stmaps and 5 bucks. Still
before anything I made sure it was
all legal as you may by calling the US POST OFFICE
(1800-725-2161)
It turns out the process is completely legal and very simple.
Withing a
week I began getting money and it didnt stop.... I was thrilled
to
have
recieved $30 after my first week abd even more so when after
the
second week I had brought in over $1000. I dont know about you
but I could definitely use the money. The process is very easy
and
has 3 simple steps:

STEP 1: Get 5 peoces of paper and write the following at the
top
of each
"PLEASE PUT ME ON YOUR MAILING LIST"
now get 5 one dollar bills and place ONE inside of each of
the
sheets of paper. Place the sheets of paper into five seperate
envelopes and seal them. You should have 5 envelops each with a
sheet of papaer and 1 dollar inside. Mail the envelopes to the
following 5 adresses:

1. Scott Hilterbran
222 W. Pleasant St
Hillsboro, OH 45133

2. Paul Mewes
5550 Fillmore St
Merrillville, IN 46410

3. Scott Brkovich
2251 Sandhurst Drive
Castle Rock, CO 80104

4. Abalou Bodjona
2706 Nueces, Apt 214
Austin, TX 78705

5. Marchello Ferrara
3412 Norton St
Hopewell, Va 23860

STEP 2: now take the # 1 name off the list and move the other
names up (2 becomes 1, 3 becomes 2, etc.) ADD YOUR NAME AS
NUMBER
5
ON THE LIST. Change anything you need but try to keep this
letter
as close to the original as possible. Now post your amended
article
to at least 200 news groups. There are close to 18,000 and you
only need to send to 200 so it wont be hard. REMEMBER YOU CAN
SEND MORE THAN 200 & THAT THE MORE YOU SEND THE MORE MONEY
YOU
WILL MAKE! Now here's how to post to newsgroups.

FOR NETSCAPE USERS:

1. click on any news group. then click on "to news" which is at
the top left corner of the news group page. this will bring up
a
message box.

2. Fill in the SUBJECT with a flashy title that will get people
to
read your post like this one.

3. Now go to the message part of the box and retype this
letter
exactly with the exception of adding your name and adress at
number 5.

4. When done SAVE YOUR ARTICLE! DONT SEND UNTIL YOU SAVE IT!

5.Now that your letters saves go ahead and send your first
copy!
(click
on the "send" button in the top left corner.

6. This is where you post all 200 or how ever many you plan
to
post.
YOU MUST POST AT LEAST 200 TO MAKE GOOD MONEY!!!!!!!!!!!!!!!!
Go to any news group article and click "to news". type in your
flashy subject name in the subject box and place your cursor in
the message
box, Now click on "attachment" click on attachment file and find
your letter where evere you saved it. Click on your file and

click
"open" amd then on "ok". You should see your name shaded in the
attachment box. NOW POST AWAY!!!!!!!!

FOR USING INTERNET EXPLORER:

Its just as easy. HIGHLIGHT THIS ENTIRE ARTICLE and press "CTRL"
and the "C" key at the same time to copy this article. Then
print
the article for your records. NEXT go to the news groups and
press
"post an article" type in your flashy subject and click the
large
window
below. Press "CTRL" and "V" and the article will appear in the
message window. **BE SURE TO ADD YOUR NAME AND ADRESS TO THE
COPIES YOU SEND**********
Now re-highlight and re-copy for each news group. It was tricky
for
me at first but after the first few you'll be sending post in
less than 30 seconds!

Thats it. YOU WILL BEGIN RECIEVING MONY FROM AROUND THE WORLD
WITHING DAYS SO MUCH THAT YOU MAY EVENTUALLY NEED A PO BOX TO
HOLD IT ALL.....
If you wish you can remain anonymous just be sure your adress
is
correct.
Once again this is all totally legal and a great way to make
money so give it a try, at worst you'll be out 5 bucks and a
few
stamps.....
BUT I PROMISE YOU WILL MAKE MORE, A LOT MORE, AND ONCE
THE MONEY COMES IN YOU WILL WONDER WHY YOU EVER WAITED
TO START DOING THIS!!
Happy
money making.Think about all the honest people online every day,
getting a dollar from 5 percent of them would be a tremedous
sum
of money. But still the choice
is yours. I wish you the best and hope you will take this
opportunity to better yourself finacially and have fun doing
so...

Source record: 173642

HOW DO YOU HAVE THE BEST EQUIPMENT AROUND? CASH, HERE'S HOW TO GET IT FAST!!

A while ago I was reading through a letter similar to this one and thinking to myself yeah right. Making thousands of dollars off
of a $5 investment, no way but after reading several I decided to
give it a try and believe me I've never looked back. I figured what have I to lose but a couple of stmaps and 5 bucks. Still before anything I made sure it was
all legal as you may by calling the US POST OFFICE
(1800-725-2161)
It turns out the process is completely legal and very simple. Withing a
week I began getting money and it didnt stop.... I was thrilled to
have
recieved $30 after my first week abd even more so when after the
second week I had brought in over $1000. I dont know about you but I could definitely use the money. The process is very easy and
has 3 simple steps:

STEP 1: Get 5 peoces of paper and write the following at the top
of each
"PLEASE PUT ME ON YOUR MAILING LIST"
now get 5 one dollar bills and place ONE inside of each of the
sheets of paper. Place the sheets of paper into five seperate envelopes and seal them. You should have 5 envelops each with a sheet of papaer and 1 dollar inside. Mail the envelopes to the following 5 adresses:

1. Scott Hilterbran
222 W. Pleasant St
Hillsboro, OH 45133

2. Paul Mewes
5550 Fillmore St
Merrillville, IN 46410

3. Scott Brkovich
2251 Sandhurst Drive

Castle Rock, CO 80104

4. Abalou Bodjona
2706 Nueces, Apt 214
Austin, TX 78705

5. Marchello Ferrara
3412 Norton St
Hopewell, Va 23860

STEP 2: now take the # 1 name off the list and move the other names up (2 becomes 1, 3 becomes 2, etc.) ADD YOUR NAME AS NUMBER
5
ON THE LIST. Change anything you need but try to keep this letter
as close to the original as possible. Now post your amended article
to at least 200 news groups. There are close to 18,000 and you only need to send to 200 so it wont be hard. REMEMBER YOU CAN SEND MORE THAN 200 & THAT THE MORE YOU SEND THE MORE MONEY YOU
WILL MAKE! Now here's how to post to newsgroups.

FOR NETSCAPE USERS:

1. click on any news group. then click on "to news" which is at the top left corner of the news group page. this will bring up a
message box.

2. Fill in the SUBJECT with a flashy title that will get people to
read your post like this one.

3. Now go to the message part of the box and retype this letter
exactly with the exception of adding your name and adress at number 5.

4. When done SAVE YOUR ARTICLE! DONT SEND UNTIL YOU SAVE IT!

5.Now that your letters saves go ahead and send your first copy!
(click
on the "send" button in the top left corner.

6. This is where you post all 200 or how ever many you plan to
post.
YOU MUST POST AT LEAST 200 TO MAKE GOOD MONEY!!!!!!!!!!!!!!!!
Go to any news group article and click "to news". type in your flashy subject name in the subject box and place your cursor in

the message
box, Now click on "attachment" click on attachment file and find
your letter where evere you saved it. Click on your file and
click
"open" amd then on "ok". You should see your name shaded in the
attachment box. NOW POST AWAY!!!!!!!!

FOR USING INTERNET EXPLORER:

Its just as easy. HIGHLIGHT THIS ENTIRE ARTICLE and press "CTRL"
and the "C" key at the same time to copy this article. Then
print
the article for your records. NEXT go to the news groups and
press
"post an article" type in your flashy subject and click the
large
window
below. Press "CTRL" and "V" and the article will appear in the
message window. **BE SURE TO ADD YOUR NAME AND ADRESS TO THE
COPIES YOU SEND**********
Now re-highlight and re-copy for each news group. It was tricky
for
me at first but after the first few you'll be sending post in
less than 30 seconds!

Thats it. YOU WILL BEGIN RECIEVING MONY FROM AROUND THE WORLD
WITHING DAYS SO MUCH THAT YOU MAY EVENTUALLY NEED A PO BOX TO
HOLD IT ALL.....
If you wish you can remain anonymous just be sure your adress
is
correct.
Once again this is all totally legal and a great way to make
money so give it a try, at worst you'll be out 5 bucks and a
few
stamps.....
BUT I PROMISE YOU WILL MAKE MORE, A LOT MORE, AND ONCE
THE MONEY COMES IN YOU WILL WONDER WHY YOU EVER WAITED

I have 2 DB Products model DB809T3X commercial grade antennas.
These are factory ready for use from 806 - 901mhz and will opperate up to
945 mhz with minimum radiation pattern degredation.
New sold for $1050 each will sacrifice for $200 each or trade for 6
meter gear.
Price does not include Shipping from the Minneapolis area.

They typically operate in the 33cm band - 910 - 920 MHz.
ATVQuarterly magazine published an article a year or so back
that showed the schematics and how to use them on ATV.

The URL is: http://www.stevens.com/atvq

There he has an index of all published articles. I believe the
one of interest to you is:

CHEAP 900 RX/TX (RABBITS) ATVQ 1 V4 #2

I use a pair for ATV. Bear in mind that they are AM vs. FM -
at those frequencies, FM is popular on ATV (about 50/50 AM/FM systems, I
operate both).

Have Fun

Hello to All:

I am looking to purchase 2 RF meters. I mostly need an RF Level meter that has a range of (approximately) -40 dBm to +30 dBm. Ideally, the scale step size will be 10 dB. The more sensitive the better. These need only be of COMMERCIAL grade. I do not need (nor can afford) Lab. quality equipment.

I also need a VSWR (or SWR) meter. I hope not to have any SWR's greater than 3:1 so anything at or beyond is fine.

Will buy same day as contacted...need lever meter immediately. Plan to ship next day air...freight collect. Payment terms are up to you.

Thanks!

The way I understand it, R-406A is the EPA designation for GHG-12.
George does have some other varient formulations with other designations
for use in home air conditioners, refrigerators, and the like.

>I guess the real commercial web site is now
> http://worldserver.com/R-406A/peoples/ghg/ghg.html

Just http://www.worldserver.com/R-406A/ is the page where you'll find links
to technical info and distribution.

>Disclaimer: I have nothing to do with George Goble, his refrigerants,
>etc. I just knew him in college...

I didn't know him in college (that must have been interesting), but I have mixed
up and tried the GHG-12 formulation. It works.

>de Brian, WV1R

There are at least 3 ways to increase the IC-706 receive sensitivity on 162.55 MHz. The simplest is the "cut the yellow wire" mod. But that has some undesirable side effects. A more complex yellow wire mod requires the wire to be cut and rerouted to another point in the radio (on the synthesizer board). Icom disavows this mod, but it does work better than the basic yellow wire mod.

But the real solution is to fix the problem with the wideband receive filter. This requires removing and discarding one SMT capacitor, removing another, and re-installing it piggyback across a third. This corrects the filter problem and allows full sensitivity reception up to the 200 MHz tuning limit of the radio.

Having a copy of the service manual is a must for performing this mod. That allows you to identify the capacitors to be altered using the X-ray board layouts. This mod can be slightly tricky if you don't have SMT experience and the proper tooling. But you should have both anyway if you want to deal with modern amateur radios. The tooling isn't expensive, and the skills aren't hard to master.

As the subject line says, we need info on the Darcom 9000. Specifically a copy of the service manual is needed, and programming information for the EPROM is required. Anyone have anything?

This is a 928 to 952 MHz duplex radio which we want to move down into the 902-928 MHz band. We already know the front end filters won't tune down into the range, but we have alternative filters available. We just don't know how to reprogram the frequencies.

At the risk of being misinterpreted ...

Grasp the power cord at the point at which it attaches to
the power source.

Travel down the power cord until you meet a pair of plugs
(male and female).

Detach the plugs one from the other, but when done, leave
your ->left<- hand on the cable coming from the power
source, and keep your ->right<- hand on the other side of
the connector.

Move your right hand, still hanging on to that power cable,
with a black box about the size of a book attached to it,
over a waste receptacle of some sort.

Then open your ->right<- hand and release all that you hold
there.

After accomplishing that feat, go out and buy a more modern
radio.

(The IC27A/H series dates back over fifteen years, and there
have been a lot of changes in state of the art since then.)

You can buy a fifty watt, fully synthesized radio with forty
memories, CTCSS encode/decode, wide range receive, DTMF
paging, DTMF microphone, transmit timer and auto-power-off
timer, automatic display dimmer and so on and so on for
under $240.00 ...

Very 73 and good luck in your search!

: Good luck trying to buy one ..no comm.for that range

That is not true. There are many 900 MHz antennas available for base stations, and some for mobiles. There are a lot of users of the 900 MHz band - such as 900 MHz trunking, and unlicensed low-power stations as well.

Also, it would be easy to adapt many 800 MHz antennas to work.

The fan in the original runs *all* the time. The Mk II fan is operated by a
thermal switch. You have to realize that the radio is dissipating a
bit over 27 watts on receive. In that tight package, that causes heat
buildup sufficient to merit the fan coming on from time to time unless
the radio has some air flow. Put it in front of an air conditioning vent,
and the fan should rarely come on during receive.

And why would that be? The inverter won't know the difference whether it
is drawing power from a battery or direct from the alternator. Today's auto
alternators can supply a minimum of 65 amps, and many are larger than
that. So transient draws by the inverter would have to be really large to require
battery buffering. (Inverters don't care if the power is a little dirty, they're going
to chop it anyway.) A second battery may be advisable if you're going to run
the inverter while the auto engine is *off*. Otherwise you may drain the cranking
battery to the point it won't start the car.

Mailloop v3.0 is an industrial strength bulk mailer.

Mailloop v3.0 is a bulk mailing program for the internet. It can take a single message and broadcast it to either a listing of e-mail addresses or to a listing of newsgroups. Creates custom newsgroup lists by filtering NNTP servers. Creates custom e-mail lists by extracting them from newsgroups. Can also extract e-mail addresses or newsgroup names from other protocols. Built-in NNTP, SMTP, POP, FTP, HTTP, EXEC, CGI, WHOIS and FINGER clients. Anti-cancelbot feature. Automatically processes remove requests. Includes extensive on-line help.
The most powerful bulk mailer available. Requires Windows 95 or NT 3.51+ and internet access.

The "Program" Mailloop is only available in English.

For more info goto: http://205.199.4.219

http://205.199.4.219

Using it is easy:

1) Create a message (http://205.199.4.219/editor.htm)
...by using the pull down menus or
...by using any editor

2) Create a newsgroups list (http://205.199.4.219/news3.htm)
...by filtering an NNTP server or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from any FTP file or
...by extracting from any HTTP file

3) Create an e-mail list (http://205.199.4.219/em3.htm)
...by extracting from newsgroups or
...by importing from any text file or
...by manually creating with any editor or
...by extracting from a WHOIS response or
...by extracting from a fingering response or
...by extracting from a UNIX response or
...by extracting from any FTP file or
...by extracting from any HTTP file or

4) Broadcast the message
...to the e-mail list or (http://205.199.4.219/embc.htm)
...to the newsgroup list (http://205.199.4.219/ngbc.htm)

5) Then process the remove requests
...by using the mailbox processor (http://205.199.4.219/pop.htm)

6) If you want you can use the Newsletter Sever
...The Newsletter Sever will allow you to have an topic-specific newsletter that other can subscribe
and unsubscribe to.
...Customizing this server response files (http://205.199.4.219/response.htm)
...Creating a new newsletter (http://205.199.4.219/create.htm)
...Creating and Updating a newsletter the actual newsletter (http://205.199.4.219/update.htm)

Scott, compensating a channel element is for temprature
stability and has nothing to do with operating frequency and everything
to do with the temp curve of the crystals you bought. The come in three
standard curves labeled a,b and c. The crystal house will do it for a
fee but i just solder them in and go. Once in about 30 that i have done
I have had a problem with excessive freq drift during the winter wiht
the truck parked outside all night (-10 degrees). In the shack this
should not be a problem. If you do get a troublesome unit ship it to the
place where you got the crystals and they should be able to take care of
it for you. I dont know how to do it myself.

>
Read the manual very carefully. Make sure you also read the errata. In my manual the pinouts are incorrect on one of the digital jacks. There is no substitute for doing the home work if you want to get the most out of this exceptional rig.

>
>Gary
>Gary Coffman KE4ZV | You Make It | Email:

Ah, didn't realize that the original ran all the time. I was wondering
about the dissipation in receive in that size package - it seemed to do
it more when I had the volume up high than when it was down low for
digital modes - which got me to thinking it might actually be heat from
the audio amp and other circuitry. It's not in the car, but I bet I can
rig a quieter fan to blow across it. That or get the extention cable and
put the RF deck and the fan on the floor and just have the head up on the
desk. In the mobile I doubt I'd even notice the fan was running.

From: AC6V <ac6v@ix.netcom.com>
Message-ID: <33983277.75D2@ix.netcom.com>
Source record: 173675

Rod KM6SN does not have access to news groups but does have E-Mail and asked me to post the following on his behalf:

From: km6sn@beacons.cts.com (Rod Davis)
Subject: [Mobile/Portable] need help on Volvo noise

Hi
I need help identifying and resolving noise from a 91 Volvo 240 series. On 20 meters the noise level is high, and I have heard that there is an on-board computer with a clock freq of 14 Mhz.

The noise seems to be picked up by the antenna, as opposed to coming through
the 12 volt line. The antenna installation is reasonable, with the coax routed through the center of the car to the trunk, where the antenna is on
the left rear fender. The noise is present when I run from a battery that is
totally independent of the car's electrical system.

My questions:

1. Is the on-board-computer the culprit?
2. Are there known cures for this?
3. Is Volvo corporate technical support able to help with this situation?

Any help and info specific to this model of car would be appreciated.

Thanks,

Rod, km6sn@beacons.cts.com

Please E-Mail KM6SN as Above -- do not hit reply to AC6V thanks.

From: ericp@linda.teleport.com
Message-ID: <5nd7ge$6fo$1@linda.teleport.com>
Source record: 173480

Hello. Does anyone know where I can get hold of a head set for my FT470
HT?
It would have to plug into the external microphone jack unless you know if
the ft470 has any other places to plug in head phones.
My HT does not have voice operated relay although most of the head sets I
have heard of that go with that unit have built in transmitters for VOX
operation.
Please reply via e-mail if you have any recommendations.
Thanks.

rec.radio.amateur.equipment,rec.radio.amateur.misc,rec.radio.swap,rec.antiques.radio+phono,rec.radio.amateur.boatanchors

We have a ton of stuff that our father collected over the years. We
have divided it into three lots.
All prices are negotiable. Buyer must pick up stuff in suburb of
Chicago. No delivery or shipping.
Will consider splitting it up but would rather make a deal for the
entire lot.

Lot 1

Meters: Approximately 20 analog meters AC/DC volt, amp, milliamp, etc.
Many are Weston and still in original boxes.
1 Jewell Galvanometer
Several Simpson voltmeters (different ranges) - no probes included
Meters: 40 miscellaneous analog meters. Many in original boxes
Miscellaneous Electronic parts:
Resistors
Photocells (w/spec sheet)
Vidicon tube
Relays
Tuning capacitor
2 headsets
2 Signal Corps oscillators
2 CB converters
crystals (assorted frequencies)
Antenna relay
misc. knobs
transformers
9 things we couldn't identify
Miscellaneous small parts:
rectifiers, diodes, reflectors, BFOs
more
Coil forms, RF coils
Disc capacitors
Variable condensers, Trimmer condensers

$250.00

Lot 2

Sylvania Signal Generator Type 216 (book included)
Heathkit Impedence Bridge (book included)
Heathkit Q-meter
2 Olsen AM broadcast tuners
RCA low frequency tuner
2 Decade resistance boxes (wood case)
Decade resistance box (metal case)
Wheatstone Bridge (Wood case)
Boonton Q-meter (100amp) Serial#370
Wells Gardner receiver
Crystal controlled Oscilator (Blilet Electric) Model 10
TS32A/TRC-1 Oscillator
Pocketscope S-14-A
Heathkit Oscilloscope
Vacuum tube voltmeter - General Radio Type 726-A Serial#759
General Radio Impedence Bridge 650A Serial #1952
2 Zenith tuners
Knight preamp
Tuner DB22A
Variable Air condenser (wood)
Low frequency tuner (RCA)
Precision wavemeter

$250.00

Lot 3

Aircraft tp aircraft radio direction finder
Shortwave receiver
Navy Panoramic Adapter BC1032-A
Hammerlund Superpro receiver with power supply
2 Navy Receivers Collins type COL-46159
ABS-3 Navy Receiver
Navy radio receiver CEX-46152
Signal Corps Amp alignment test unit
Navy Microfilm projector

$250.00

Bring a van and take it all, will make a great deal for everything.

All of a sudden I'm having problem with my 50R HT. They transmit or PTT
will not operate as long as the led for squelch is lit up. In other
words I have to wait until a repeater drops before replying to someone.
I've tried everything on the menu adjustments but can't get around it.
I'm sure it is some rather non-descript setting that needs to be changed
but sure can't figure it out. It's one of the early models with the
wide receive mod. I've reset CPU and still cn't get it out of that
mode. Any ideas or suggestions? Thanks !! 73

I believe you got a schematic with the rig? If so look back from the
antenna jack trace it until you find the variable resistors that control
output power. They'll be marked something like VR1, VR2, VR3. They
will also have a line beside them that says HIGH/MEDIUM or LOW. You get
the idea. most rigs can be adjusted by looking for this. Good luck!

Pole Climbing Gear FOR SALE

I am no longer in the telecommunications industry,
The following is what I have for sale:

Everything is either new or very low mileage

Bashlin - D21 Climbing Belt
Klein Safety strap
Klein Climbers - complete with spike guards
Klein Safety Orange Tool Bag - Type 5180

All of this for $250.00

I also have:

2 LTC X-500 Coring tools for Trilogy MC2 cable
1 LTC T-500 Coring Tool for P3
These are still in the Box, $35.00 each or
$100.00 for all three

Mid State - SAM 1 Signal Analysis Meter
(Field Strength Meter) In good condition

$300.00

If you are interested, please send Email to:

Source record: 173536
Cross-posted to: rec.radio.amateur.antenna,rec.radio.amateur.equipment

I was considering purchasing a vertical HF antenna. I was wondering what the performance (especially DX) of a typical vertical is compared to the performance of a typical dipole. I am currenly using a SHORTY all-bander dipole that I am tuning with an MFJ-949E tuner. The rig is a yaesu FT-840 at 100 watts.

My primary interest is working 20 meter DX and I don't have the room to swing a beam. Although I've had good luck with DX using my current setup, I would like to have a little more edge to help in a pile-up.

Any info would be greatly appreciated.

I got a response from a HAM in England who said there was a comparision between the original and the MKII in a British HAM magazine this month. I just got my MKII and it does everything that it is supposed to. I do find that the fan in the power supply is much louder than the one on the radio, but the one from the computer is probably louder. It is more sensitive to SWR than my TenTec rig and your antenna has to be pretty well matched to get the full power output. If it is off by much, it reduces power. When you set it up for repeaters, make sure you set the tone for the transmit VFO, It took we awhile to figure out that I have set it on one VFO, but not the other. I knew how small it was from the dimensions, but I am still amazed at all that is in that size box.

> =TOM=
> tnic@idt.netThe paper loss of 9913 flex at 2M is 1.6 dB and 2.8 dB at 70cM. Your losses are 2.2 dB and 4.6 dB. I was using this stuff for the flexible run from the base of my 23cM EME dish to the feedhorn. When I put it on my network analyzer I threw it out and replaced it with some Times LMR flex. The return loss on a 20' length of 9913 flex w/ appropriate N connecors and a precision termination was only 13 dB. The LMR R.L. is 24 dB.

Source record: 173543

Is there a easy way to get the Icom 706 Mark II to put out a 10 watt carrier for tuning a manual tuner? Do I have to "fool the Ic-706 and tell it the Icom AT-180 is installed (even though it isn't).
I was considering a manual tuner for price and if I could just press the "TUNE" button and get even 5 watts out to tune the antenna it would be very convienent. Thanks in advance.

Hallo, Alberto

The Icom radios do not have a "one-way" crossband repeat function, but you
can make the radio work that way. Just turn on CTCSS Decode on the band
you want to NOT receive. Select a CTCSS tone that nobody will be using.
With this set-up, signals on that band will not activate the crossband
repeater.

It's basically an antenna tuner for a ground radial, and it works like
an antenna tuner. It's nice to have if you use a single wire
antenna with an antenna tuner; this type of antenna also needs
a ground counterpoise. A counterpoise is normally a 1/4-wave wire.
With the MFJ artificial ground, you can also tune a random-length
wire to be your counterpoise. So, with two pieces of random length
wire, one for your antenna and one for your ground, you can have
a completely tuned system using an antenna tuner and an MFJ
Artificial Ground.

You don't need this device if you have a 1/2-wave dipole, since a
counterpoise is not required.

I have a GAP Challenger DX and I can HIGHLY recommend it. I've worked several DX stations with my TS-450 with no trouble. The assembly is a breeze and there are only 3 radials of 25ft. required. NO TUNING is required. I think it took me abt 3 hrs from opening the box to calling CQ. Quite a difference after spending a whole afternoon tuning up a friends R7 with the MFJ antenna analyzer. I would now probably get their Titan DX but it wasn't available when I got mine. A friend just a block away has the Voyager DX and told me he thinks that it's a bit too long on 20M but is great on 160M.

Hi Chip Take a look at Bill Orr's (W6SAI) Books.

In his book on Verticals, he shows a comparison of the field patterns of horizontal and vertical antennas above a good ground. The horizontal antenna is 3/4 wavelength above ground and the vertical antenna is at ground level. Both antennas provide good radiation at a vertical angle of about 20 degrees. But the horizontal antenna must be at 52 feet high to do the job on the 20 Meter band.

For DXing, a low angle of radiation is most desirable and with dipoles and beams -- Ya gotta get em up in the air.

Other good references are the ARRL Antenna Handbook and ON4UN's book on low band DXing.

NO, use the RTTY mode as the radio will key when you press the PTT.
Go into the disp mode and sent the power for 10 watts.

Gary

I'm looking for software to program my Motorola handheld. Model MT1000.
It will handle up to 99 frequiencies in memory. I don't need to program
that many in memory but I hate the inconvenience of taking it to a dealer
each time I need to put in a new frequency or change a tone. Does anyone
have suggestions that might help?

Thanks,
KC7ILQ, Wayne

DO YOU WANT TO MAKE MONEY FAST!?!?!?!?

The other day, I recieved this email. Now, I am a college student, and I am not at all weathly. So, I decided to give this a whirl... Good luck to you:)

"A little while back, I was reading my junk E-Mail just like you are no, and came across an E-Mail similar to this that said you could make thousands of dollars within weeks with only an initial investment of $5.00! So, I thought, 'Yeah, right, this must be a scam!, like most of us, but I was curious, like most of us, so I kept reading. Anyway, it said that you send $1.00 to each of the 5 names listed in the article. You then place your own name and addresses in the bottom of the list at #5 and send an E-Mail to at least 200 news groups. (There are thousands). No catch, that was it. So, after thinking about it, and talking to a few people first, I thought about trying it. I figured what have I got to lose except 5 stamps and $5.00, right? Like most of us, I was a little skeptical and a little worried about the legal aspects of it all. So, I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal! Then, I invested the measly $5.00... Well, GUESS WHAT! With in 7 days, I started getting money in the mail. I was shocked! I still figured it would end soon, and didn't give it another thought. But, the money just continued coming in. In my first week, I made about $20-$30. By the end of the second week, I had made a total of over $1,000! In the third week, I had over $10,000 and it's still growing! This is now my fourth week, and I have made a total of just over $42,000!!!! And it's still coming in!!! It's certainly worth $5.00 and 5 stamps. I spent more that that on the lottery! Let me tell you how this works and most importantly, WHY IT WORKS. Also, make sure you print a copy of this article now, so you can get the info you need off of it as you need it. The process is very simple and consists of 3 easy steps:

STEP 1: Get 5 separate pieces of paper and write the following on each piece of paper: "PLEASE PUT ME ON YOUR MAILING LIST" Now get 5 $1.00 bills and place ONE inside of EACH of the 5 pieces of paper so the bill will not be seen through the envelope to prevent thievery. Next, place one paper in each of the 5 envelopes and seal them. You should now have 5 sealed envelopes, each with a piece of paper stating the above phrase and a $1.00 bill. What you are doing is creating a service by this. THIS IS PERFECTLY LEGAL! Mail the 5 envelopes to the following addresses:

1. Donald Foulk
216 N. Myers

Bryan, OH 43506

2. Scott Hilterbran
222 W. Pleasant St.
Hillsboro, OH 45133

3. Paul Mewes
5550 Fillmore St.
Merrillville, IN 46410

4. Scott Brkovich
2251 Sandhurst Dr.
Castle Rock, CO 80104

5. Anne E. Ryan
421 E. 32nd St.
Hibbing, MN 55746

Continue to STEP 2.

STEP 2: Now take the number 1 name off of the list that you see above, move the other names up (5 becomes 4, 4 becomes 3, etc...), and add YOUR name and address as number 5 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newssgroups. (I think there are close to 18,000) All you need is 200, but remember, the more you post, the more money you make! Don't know HOW to post in the news groups? Well, do exactly the following:

FOR NETSCAPE USERS:

1) Click on any news group, like normal. Then click on 'To News', which is in the top left corner of the news group page. This will bring up a message box.

2) Fill in the SUBJECT with a flashy title, like the one I used, something to catch the eye!

3) Now go to the message part of the box and retype this letter exactly as it is here, with the exception of your few changes. (Remember to add your name to number 5 and move the rest up)

4) When you're done typing in the WHOLE letter, click on 'FILE' above the send button. Then 'SAVE AS' DO NOT SEND YOUR ARTICLE UNTIL YOU SAVE IT!!!!!!!!! (So you don't have to retype this 200+ times!!:)

5) Now that you have saved the letter, go ahead and send your first cope! (Click the 'SEND' button in the top left corner)

6) This is where you post all 200! Ok, go to ANY news group article and click the 'TO NEWS' button again. Type in your flashy subject in the 'SUBJECT BOX', then go to the message and place your cursor here. Now, click on 'ATTACHMENT' which is right below the 'SUBJECT BOX'.

Click on attach file, then find your letter wherever you saved it. Click once on your file the click 'OPEN' then click 'OK'. If you did this right, you should see your filename in the 'ATTACHMENT BOX' and it will be shaded. NOW POST AWAY!!!!!

IF YOU ARE USING INTERNET EXPLORER:

It's just as easy, holding down the left mouse button, highlight this entire article, then press the 'CTRL' key and 'C' key at the same time to copy this article. Then, print the article for your records to have the names of those you will be sending $1.00 to.

NEXT: Go to the news groups and press 'POST AN ARTICLE', type in your flashy subject and click the large window below. Press 'CTRL' and 'V', and the article will appear in the message window.

BE SURE TO MAKE YOUR ADDRESS CHANGES TO THE 5 NAMES!!! Now, re-highlight the article and re-copy it so you have the changes.... Then, all you have to do for each news group is 'CTRL' and 'V' and press 'POST'. It's that easy! THAT'S IT! All you have to do is jump to different news groups and post away. After you get the hang of it, it will take about 30 seconds for each news group! REMEMBER, THE MORE NEWS GROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT YOU HAVE TO POST A MINIMUM OF 200!!!!!!!!!!!

That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O. Box due to the large amount of mail you receive. If you wish to stay anonymous, you can invent a name to us, as long as the postman will deliver it.

JUST MAKE SURE ALL OF THE ADDRESSES ARE CORRECT!!!!!!!!!

Now the WHY part: Out of 200 postings, say I receive only 5 replies (a very low example). So, then I made $5.00 with my name at #5 on the letter. Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #4, and only 5 people respond to each of the orginal 5. That is another $25.00 for me, now those 25 each make 200 minimum posts with my name at #3, and only 5 replies each, I will bring in an additional $626!! Ok, now here is the fun part. Each of those 625 people post a MINIMUM 200 letters with my name at #1, and they each only receive 5 replies, that just make me $3,125!!! With an original investment of only $5.00!!! AMAZING!! And as I said, 5 responses is actually VERY LOW! Average is probable 20-30 letters! So, let's put those figures at just 15 respones per person. Here is what you will make: At #5: $15, at #4: $225, at #3: $3,375, at #2: $50,625, at #1: $759,375!!!!!!
When your name is no longer on the list, you just take the latest posting in the news groups, and send out another $5.00 to names on the list, putting you at #5. And start posting! The thing to remember is, do you realize that thousands of people over the world are joining the internet and reading these articles everyday, JUST LIKE YOU ARE NOW! So can you afford $5.00 and see if it really works? I think so... People
